Practical Music Education Technology Richard Dammers, Marjorie LoPresti, 2020 Today's music teachers are caught in a conundrum about technology - while all are interested in it and told to utilize it in music instruction, a lack of equipment and funding act as enormous barriers to technology access. In fact, studies indicate that the mere perception of these obstacles may be partly responsible for the gap between these teachers' interest in technology and the lack of technology integration in the classroom. As a result, students potentially miss out on active, hands-on music technology instruction at school. In Practical Music Education Technology, veteran music educators Rick Dammers and Marjorie LoPresti help music teachers introduce technology into the classroom by providing accessible strategies to support and enrich students' musical learning. The authors highlight a plethora of free online tools at teachers' disposal, and provide options that can be flexible for all school environments and types of teachers - from those with large budgets to those operating on a shoestring, from those well-versed in technology to non-experts. Each chapter outlines pedagogically appropriate resources and strategies that facilitate, support, and enhance music learning, performance, and creation. Additionally, model lesson plans featuring classroom-tested uses of technology aim to empower student engagement while also keeping music learning goals at the forefront. All teaching ideas presented can be tailored to individual teachers' needs and preferences, making Practical Music

Education Technology an essential guide to music technology for the everyday music teacher.

Mathematics of Musical Rhythm Jason Yust, Christopher White, Leigh VanHandel, 2024-09-06 This book presents original research applying mathematics to musical rhythm, with a focus on computational methods, theoretical approaches, analysis of rhythm in folk and global music traditions, syncopation, and maximal evenness. It honours the legacy of computer scientist and music theorist Godfried Toussaint. In addition to addressing a topic pioneered by Toussaint, application of mathematics to representation of musical rhythms, the volume also builds upon his interest in analysis of music traditions outside the European classical canon and the use of computational methods. Empirical contributions include a study of timing in Scandinavian polska performance showing that timing interacts with rhythmic features and a study of vocal melody rhythm in pre- and post-millennial popular music, showing significant differences in tempo, rhythmic density, and repetition in the two corpora. Theoretical contributions include a survey of timeline rhythms of African and African diasporic musics showing the prevalence of rhythms of a special type related to maximal evenness, an application of matrix algebra to rhythm and syncopation with analysis of clave rhythms, a ragtime corpus, and Balinese gong cycles, and a mathematical development of a new classification of smooth rhythms using a “shadow rhythm” algorithm suggested by Toussaint. The volume also includes an original composition by Tom Johnson and a personal recollection of Toussaint by Francisco Gómez-Martín. This volume will be a key resource for academics, researchers, and advanced students of music, musicology, music analyses, mathematical music theory, computational musicology, and music informatics. It was originally published as a special issue of the Journal of Mathematics and Music.

The Routledge Research Companion to Popular Music Education Gareth Smith, Zack Moir, Matt Brennan, Shara Rambarran, Phil Kirkman, 2017-01-20 Popular music is a growing presence in education, formal and otherwise, from primary school to postgraduate study. Programmes, courses and modules in popular music studies, popular music performance, songwriting and areas of music technology are becoming commonplace across higher education. Additionally, specialist pop/rock/jazz graded exam syllabi, such as RockSchool and Trinity Rock and Pop, have emerged in recent years, meaning that it is now possible for school leavers in some countries to meet university entry requirements having studied only popular

music. In the context of teacher education, classroom teachers and music-specialists alike are becoming increasingly empowered to introduce popular music into their classrooms. At present, research in Popular Music Education lies at the fringes of the fields of music education, ethnomusicology, community music, cultural studies and popular music studies. The Routledge Research Companion to Popular Music Education is the first book-length publication that brings together a diverse range of scholarship in this emerging field. Perspectives include the historical, sociological, pedagogical, musicological, axiological, reflexive, critical, philosophical and ideological.
