Jeremy Rifkin

The Changing Energy Mix Paul Meier, 2020-09-21 Energy comes in many shapes and forms, from wind, solar power, geothermal, and biomass to coal, natural gas, and petroleum. The energy we consume is constantly changing, but the use of these resources—whether renewable or nonrenewable—has long-term impacts on our planet. While there has been this recent shift to renewable energy within the United States, the worldwide demand for all energy types continues to increase at a rapid rate. In fact, it has increased by 84% over the past twenty years. Despite their dwindling supply, these resources are still heavily relied on today. Coal still accounts for 30% of the electricity generated by the United States, even though natural gas is now the primary energy used to produce electricity. Likewise, only 7% of electricity usage worldwide is linked to solar and wind energy. In *The Changing Energy Mix*, Paul F. Meier compares twelve renewable and nonrenewable energy types using twelve common technical criteria. These criteria span projected reserves, cost to the consumer and supplier, energy balances, environmental issues, land area required, and lasting impacts. While explaining the pros and cons of these resources, Meier takes readers through the history of energy in the United States and world. He provides insight into energy sources, such as wind-powered and solar-powered electricity (which did not exist until the mid and late 80s, respectively), and he explains the constantly evolving world of energy. Breaking down the potential promises and struggles of transitioning to a more renewable energy-based economy, Meier explains the positive and negative implications of these various sources of energy. The resulting book equips readers with a unique understanding of the history, availability, technology, implementation cost, and concerns of renewable and nonrenewable energy.

The Green New Deal Jeremy Rifkin, 2019-09-10 New York Times–Bestselling Author: The renowned economic theorist explains how America can—and must—create a post-fossil fuel culture to survive. We can't keep doing business as usual. Facing a global emergency, a younger generation has spearheaded a national conversation around a Green New Deal—a movement with the potential to revolutionize society. But while the Green New Deal has become a lightning rod in the political sphere, there is a parallel movement emerging within the business community that will shake the very foundation of the global economy in coming years. Key sectors of the economy are fast-decoupling from fossil fuels in favor of ever-cheaper solar and wind energies and the new business opportunities and employment that accompany them. New studies are sounding the alarm that trillions of dollars in stranded fossil fuel assets could create a carbon bubble likely to burst by 2028,

causing the collapse of the fossil fuel civilization. The marketplace is speaking, and governments will need to adapt if they are to survive and prosper. In *The Green New Deal*, Jeremy Rifkin delivers the political narrative and economic plan for the Green New Deal that we need at this critical moment in history. The concurrence of a stranded fossil fuel assets bubble and a green political vision opens up the possibility of a massive shift to a post-carbon ecological era, in time to prevent a temperature rise that will tip us over the edge into runaway climate change. With twenty-five years of experience implementing Green New Deal-style transitions for both the European Union and the People's Republic of China, Rifkin offers his vision for how to transform the global economy and save life on Earth. The Green New Deal takes a stance quite different from that of typical Green New Deal supporters . . . he's interested in building factories, farms, and vehicles in a fossil-free world, asserting that 'the Green New Deal is all about infrastructure.' —The New York Times Book Review An urgent endorsement of efforts to remake a doomed fossil-fuel economy before it's too late. — Kirkus Reviews

Energia Progresiva Japhet M. Kariuki, 2025-02-04 This volume discusses the political economy of energy transition in Latin America and the Caribbean (LAC) region. Viewed through the lens of emerging progressive movements with energy at the forefront, the book explores how so-called *Energia Progresiva* can act as a driving force to address climate challenges, foster sustainable development, and ease the transition to a knowledge-based economy, setting the course for the future of Latin America and the Caribbean. Analyzing diverse contexts and realities faced by different countries in the region, it examines potential challenges and obstacles, opportunities, and policy implications. Chapters in the volume are organized around three unifying themes. Chapters in the first section provide an intertemporal analysis of energy transition in selected countries in the LAC region. Chapters in the second section discuss the paradoxical relationship between regional energy insecurity and natural resource abundance. The final section looks toward the future and the expected evolution of the region's energy industry. This volume will be of interest to researchers and students of the Latin America and Caribbean energy landscape as well as development practitioners and business consultants working on energy and infrastructure projects in the region.

Environmental Policy Michael E. Kraft, Barry G. Rabe, Norman J. Vig, 2023-10-20 As environmental issues continue to become more prevalent in society and surrounding policy challenges become more complex, *Environmental Policy* once again brings together top scholars to evaluate the changes and continuities in American environmental policy since the late 1960s and their implications for current policy. Students will learn to decipher the underlying trends, institutional constraints, and policy dilemmas that shape today's environmental politics as they evaluate approaches to future challenges.

Environmental Policy Norman J. Vig, Michael E. Kraft, Barry G. Rabe, 2021-01-08 Authoritative and trusted, *Environmental Policy* once again brings together top scholars to evaluate the changes and continuities in American environmental policy since the late 1960s and their implications for the twenty-first century. Students will learn to decipher the underlying trends,

institutional constraints, and policy dilemmas that shape today's environmental politics. The Eleventh Edition examines how policy has changed within federal institutions and state and local governments, as well as how environmental governance affects private sector policies and practices. There are five new chapters in this edition that examine the public's opinion on the environment, courts, energy policy, natural resource agencies and policies, and the political economy of green growth. The book has been updated to reflect the Trump administration's four years of policy changes and students will walk away with a measured, yet hopeful evaluation of the future challenges that policymakers will confront as the American environmental movement continues to affect the political process.

Developing a Business Case for Renewable Energy at Airports Stephen B. Barrett, Philip M. DeVita, Julie E. Kenfield, Bradley T. Jacobsen, David Y. Bannard, 2016 This report is a guidebook to help airports understand renewable energy opportunities. The report includes instructions and tools to evaluate proposed renewable energy projects and their alternatives so that an informed decision that maximizes financial, self-sustainability, environmental, and social benefits can be reached. The report lays out what a business case is, why renewable energy is important, and what a business case for renewable energy looks like. It describes the importance of identifying the project objective and understanding how renewable energy might fit into an airport's vision. A decision-making matrix is included that contains criteria used to evaluate a renewable energy project with a system for weighting each factor based on an airport's particular objectives. The report presents a business case in the context of an airport's typical master planning and capital improvement planning processes including engagement of key stakeholders. The report provides a model business case that evaluates a solar photovoltaic facility, a fossil fuel generator, and a fuel cell as options for providing on-site electricity generation to improve an airport's energy stability and resiliency. It also includes examples of renewable energy business cases from both aviation and non-aviation organizations to highlight lessons learned. A sample request for proposals and a sample power purchase agreement are provided for project implementation. A CD-ROM (CRP-CD-177) provides supplemental information.

Estimated Cost of New Renewable and Fossil Generation in California Ivin Rhyne, Joel Klein, Bryan Neff, 2015
Florida Law Review, 2015

Coordinated Operations of Flexible Coal and Renewable Energy Power Plants Rubenka Bandyopadhyay, 2018 The electricity sector is rapidly changing. Faced with the challenge of climate change, coal consumption is declining. Policy designs focus on raising the penetration of renewable energy. However, there are still drawbacks that prevent renewable energy from being adopted at industrial scale. It is therefore increasingly important for the policy makers to identify ways to leverage the benefits of renewable energy and at the same time preserve the availability, affordability and reliability of electricity. Several studies have explored the possibility of coordinating fossil fuel fired power plants with renewable energy. This report presents several options for the northern hemisphere.
