The book serves as a conduit between college education and the real-world chemical engineering practice. It answers many questions students and young engineers often ask which include: How is what I studied in the classroom being applied in the industrial setting? What steps do I need to take to become a professional chemical engineer? What are the career diversities in chemical engineering and the engineering knowledge required? How is chemical engineering design done in real-world? What are the chemical engineering computer tools and their applications? What are the prospects, present and future challenges of chemical engineering? And so on. Mobile and Rapidly Assembled Structures II F. Escrig,C. A. Brebbia,1996 Structures which move in the course of normal use, or which have to be assembled at high speed on a relatively unprepared sight, offer a particular challenge to the designer. The interaction between the structure and the mechanism by which it moves is important for mobile frameworks. The speed of assembly (and the implications to logistics, materials and cost) is a major factor in many structures. This book contains the proceedings of the Second International Conference on Mobile and Rapidly Assembled Structures (MARAS 96) held in Seville in June 1996. The book covers a range of topics including Deployable Structures, Fabric Architecture, Materials, Architectural Concepts, Geometry, Bridges, Transport, Towers and Masts, and Retractable Structures. The proceedings will be of interest to engineers, architects and researchers concerned with the design, analysis, manufacture and erection of rapidly assembled structures.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
