Culture and Psychiatric Diagnosis Juan E. Mezzich, 2002-10-01 The United States will no longer have a Caucasian majority in the second half of the 21st century. Evidence shows that misdiagnosis of mental disorders occurs more frequently in minority populations. Thus, the domestic and international utility of DSM-IV and its companions will depend on their suitability for use with various cultures. A key feature of this volume is the collaboration of cultural experts, members of the National Institute of Mental Health (NIMH) Culture and Diagnosis Group, nosologists, and members of the DSM-IV Task Force and Work Groups. The NIMH and the American Psychiatric Association held a conference on Culture and Psychiatric Diagnosis to prepare for DSM-IV. Culture and Psychiatric Diagnosis developed from that meeting to enhance the cultural validity of DSM-IV. If clinicians are to become culturally sensitive, they must understand the criteria that define a disorder and consider the cultural context of the person being examined. They can then ascertain whether the criteria are applicable

in the present cultural context of the patient. Culture and Psychiatric Diagnosis will benefit all clinicians treating minority patients because it documents and clarifies how cultural factors influence psychopathology; the manifestations, assessment, and course of mental disorders, and the response to treatment.

The second axis covers personality disorders and intellectual disabilities. The remaining axes cover medical, psychosocial, environmental, and childhood factors functionally necessary to provide diagnostic criteria for health care assessments. The DSM evolved from systems for collecting census and psychiatric hospital statistics, and from a United States Army manual. The DSM was substantially revised in 1980. The five revisions since its first publication in 1952 incrementally added to the number of mental disorders, though also removing those no longer considered to be mental disorders. The last major revision was the fourth edition (DSM-IV), published in 1994, however the latest edition is the fifth (relatively minor) revision, published in 2000. This is the DSM IV-TR (TR representing an abbreviation for Text Revision). The fifth edition (DSM-5) is currently in consultation, planning and preparation, due for publication in May 2013.
