

Killing In The Name Of Tab

Michael Hoelscher

The Killing Name Brett Anderson Walker,2016-11-09 Brett Anderson Walker's debut novel, *The Killing Name* (first in a series), follows the exploits of Private Investigator Cubby Dillon, a cocky American living in Paris. Despite his desire to be an artist, he finds it impossible to complete a single painting. Fortunately, his uncanny ability to locate missing persons, coupled with a steadfast respect for client confidentiality, has made him highly sought-after by Europe's wealthy. When Dillon is hired by a Belgian chocolate heiress to locate her missing husband, he is drawn into the web of two brutal Russian brothers determined to implicate him in a series of murders. Even with the help of his best friend, Captain Pierre Lamont of the Paris Homicide Department, it will require stealth and a lot of luck to clear him and disrupt the brothers' ring of prostitution. The story takes the reader from the filthy smelting plants of Nizhny Tagil, Russia, to upscale Parisian art galleries, climaxing between smoky grills and juju bands at an African festival in the southwest of France.

General Relativity Robert Geroch,2013-02-25 Robert Geroch's lecture notes on general relativity are unique in three main respects. First, the physics of general relativity and the mathematics, which describes it, are masterfully intertwined in such a way that both reinforce each other to facilitate the understanding of the most abstract and subtle issues. Second, the physical phenomena are first properly explained in terms of spacetime and then it is shown how they can be "decomposed" into familiar quantities, expressed in terms of space and time, which are measured by an observer. Third, Geroch's successful pedagogical approach to teaching theoretical physics through visualization of even the most abstract concepts is fully applied in his lectures on general relativity by the use of around a hundred figures. Although the book contains lecture notes written in 1972, it is (and will remain) an excellent introduction to general relativity, which covers its physical foundations, its mathematical formalism, the classical tests of its predictions, its application to cosmology, a number of specific and important issues (such as the initial value formulation of general relativity, signal propagation, time orientation, causality violation, singularity theorems, conformal transformations, and asymptotic structure of spacetime), and the early approaches to quantization of the gravitational field. Geroch's *Differential Geometry: 1972 Lecture Notes* can serve as a very helpful companion to this book.
