Photocatalytic Activities for Environmental Remediation and Energy Conversion Hairus Abdullah, 2022-10-18 This book highlights sustainable methods with photocatalytic activities to remediate environment and for energy conversion. The related photocatalytic materials are discussed in detail. Some significant photocatalytic applications in degrading industrial pollutants that include different organic dyes, purifying the polluted air, converting CO₂ to alcohol fuels, storing energy from sunlight as ammonia by converting N₂ to NH₃, and splitting water by optimizing the oxygen evolution process are thoroughly elucidated. The chapters introduce the necessary materials and results, leading to a better conceptualization in order to work in the field of photocatalysis. Some related perspectives and outlooks are discussed in the last chapter for possible future developments.

Solar Light-to-Hydrogenated Organic Conversion Hairus Abdullah, 2024-01-03 This book highlights the promising photocatalytic methods for synthesizing organic chemicals by simultaneously degrading the toxicity of raw substances used for organic synthesis. It presents various semiconducting materials with high catalytic activities in hydrogen evolution reactions (HERs) and hydrogenation reactions, as well as the material characterizations for identifying semiconductor photocatalysts. The focus is on understanding the hydrogen dissociation and activation of substances in the process of hydrogenation and the fabrication of nanostructured catalysts with desired activity and selectivity. Recent works show photocatalytic hydrogenation reactions with in situ generated H⁺ on catalyst surfaces utilizing initial chemicals such as nitrophenol, nitrobenzene, azobenzene, and benzene for valorization. In addition, the photocatalytic valorization of waste glycerol is also discussed. Besides the hydrogenation reactions, the reduction of oxygen to form H₂O₂ can be done with a photocatalytic method in atmospheric conditions. Some related perspectives and outlooks are also discussed for possible future development.

Engineers and the Two Taiwans Kuo-Hui Chang, Gary Lee Downey, Bono Po-Jen Shih, 2024-09-19 The identity of Taiwan is a matter of intense local and international debate. This book shows how engineers helped produce two distinct visions of the

land of Taiwan and its people, elevating the value of engineering as a career path in the process. The book describes how the technical work of engineers, which typically avoids partisan politics, can actually contribute to partisan differences and conflict. In most countries, the rise of engineering is about the emergence of a single dominant vision of the country. In Taiwan, two distinct visions of the land and its people emerged, owing to the presence of two distinct geographical identities— Islanders and Mainlanders. The distributed mode of production in the electronics industry proved to be transformative and created an “abnormal boys’ club” of engineers, as one group called themselves. Because the two communities were influenced by contrasting geographical identities, they felt as though they were working for different Taiwans. What a book. *Engineers and the Two Taiwans* traces how engineers creatively crafted professional identities and pathways in the cracks of multiple, shifting empires – and in so doing helped create Taiwan as a thing-unto-itself. In showing how engineers shaped and were shaped by geopolitics and the birth of a new electronics industry, the book opens up fresh perspectives on longstanding questions about who engineers are, how they are trained, where they ought to work, and ultimately what engineering is for. These engineers did politics through their material commitments even as they avoided partisan politics. Jessica M. Smith, Editor-in-chief, Engineering Studies, Professor, Engineering, Design, and Society Department, Colorado School of Mines This book explores Taiwan’s dynamic industrial evolution over the past century through the lens of different engineers’ social dynamics, identity, values, and compelling narratives. It offers insights into Taiwanese own perceptions in the electronics industry and prompts reflection on how countries navigate domestic and international technology policies and social progress. You will come to appreciate how engineers in Taiwan today bear continuing responsibilities to connect their technical work to its land and people, even when their own commitments differ from one another. The East Asian Computer Chip War Ming-chin Monique Chu, 2013-12-04 The semiconductor industry is a vital industry for military establishments worldwide, and the control of, or loss of control of, this key industry has enormous strategic implications. This book focuses on the globalization of the strategic semiconductor industry and the security ramifications of this process. It examines in particular the migration of the Taiwanese chip industry to China as part of the globalization of production processes, and the extent to which such a globalization process poses security challenges to the United States, China and Taiwan. Transcending disciplinary boundaries between international political economy, security studies, and the history of science and technology, this multidisciplinary work provides an in-depth understanding of the globalization-security nexus, and disentangles the key policy issues connected to a potential explosive flashpoint in world politics today.
