Dibujo técnico II. 2º Bachillerato CALAVERA OPI, CESAR,JIMENEZ RUIZ, ISABEL,2016-01-01 Los contenidos de este texto han sido desarrollados según lo establecido en el RD 1105/2014, de 26 de diciembre, (BOE 3 de enero de 2015) por el que se establece el currículo básico de la Educación Secundaria Obligatoria y del Bachillerato. A lo largo de Dibujo Técnico II se introduce un bloque denominado “Documentación gráfica de proyectos”, para la integración de las destrezas adquiridas en la etapa. Los contenidos de la materia en este libro, que se concibe formativamente como continuación de Dibujo técnico I, se han agrupado en cuatro bloques interrelacionados: Geometría, Sistemas de representación, Normalización y Proyectos. El primer bloque, Geometría, desarrolla durante los dos cursos que componen el Bachillerato, los contenidos necesarios para resolver problemas de configuración de formas, al tiempo que analiza su presencia en la naturaleza y en el arte a lo largo de la historia, y sus aplicaciones al mundo científico y técnico. De manera análoga, el bloque dedicado a los Sistemas de representación desarrolla los fundamentos, características y aplicaciones de las axonometrías, perspectivas cónicas, y de los sistemas diédricos y de planos acotados. Este bloque debe abordarse de manera integrada para permitir descubrir las relaciones entre sistemas y las ventajas e inconvenientes de cada uno. Además, es conveniente potenciar la utilización del dibujo “a mano alzada” como herramienta de comunicación de ideas y análisis de problemas de representación. El tercer bloque, la Normalización, pretende dotar al estudiante de los procedimientos para simplificar, unificar y objetivar las representaciones gráficas. Está especialmente relacionado con el proceso de elaboración de proyectos, objeto del último bloque, por lo que, aunque la secuencia establecida sitúa este bloque de manera específica en el primer curso, su condición de lenguaje universal hace que su utilización sea una constante a lo largo de la etapa. El cuarto bloque, denominado Proyectos, tiene como objetivo principal que el estudiante movilice e interrelacione los contenidos adquiridos a lo largo de toda la etapa, y los utilice para elaborar y presentar de forma individual y colectiva los bocetos, croquis y planos necesarios para la definición de un proyecto sencillo relacionado con el diseño gráfico, industrial o arquitectónico.

Dibujo Técnico II CALAVERA OPI, CESAR,JIMENEZ RUIZ, ISABEL,2013-06-03 Este libro busca, desde la experiencia docente de sus autores, clarificar la comprensión visual de los contenidos del Dibujo Técnico mediante un desarrollo riguroso de los mismos, con un especial esfuerzo en la claridad de sus explicaciones tanto gráficas como textuales, incidiendo en la adecuada sincronización entre dibujos y textos. El dibujo técnico es un medio de expresión y comunicación indispensable,

tanto para el desarrollo de procesos de investigación sobre las formas, como para la comprensión gráfica de proyectos tecnológicos y artísticos. Su dominio es una condición imprescindible para abordar con éxito la etapa universitaria. El dibujo técnico se desarrolla en los dos cursos de bachillerato. En primero se adquiere una visión general y completa del mismo y en segundo se aplican los conceptos en soluciones técnicas.

La geometría del diseño Kimberly Elam,2014-05-30 ¿Qué tienen en común el Escarabajo de Volkswagen, la casa Farnsworth de Mies van der Rohe, los carteles de Cassandre, el grabado Tauromaquia 20 de Goya y la catedral de Notre Dame? La comprensión profunda de los sistemas de proporción que refleja su diseño. Algunas ideas excelentes fracasan en su ejecución porque el diseñador no comprende adecuadamente los principios visuales de la composición geométrica. Este libro pretende explicar dichos principios de manera visual a través de un esclarecedor repaso de los sistemas de proporción clásicos (como la sección áurea y la secuencia Fibonacci, los rectángulos raíz, las ratios, la interrelación de las formas o las líneas reguladoras), y por medio del análisis pormenorizado de 40 diseños de carteles, objetos y edificios cuyo agudo sentido de la proporción ha legitimado el paso del tiempo. Si bien el análisis geométrico no aborda el contexto cultural en que se ha producido un diseño, sí que resulta increíblemente iluminador respecto a los principios compositivos y permite valorar la primera respuesta —intuitiva— del receptor. La geometría del diseño no pretende cuantificar la estética a través de la geometría, pero sí analizar el papel que la simetría, el orden y el equilibrio visual desempeñan en el arte y el diseño para enseñarnos a reconocer el funcionamiento de estos principios y ayudarnos a aplicarlos eficazmente en nuestro propio trabajo.

Elementos. Libros X-XIII Euclides,2016-08-05 Tanto para expertos como para novicios, el nombre Euclides se ha convertido en sinónimo de geometría. Euclides estableció lo que se convertiría en la forma clásica de una proposición matemática: un enunciado deducido lógicamente a partir de unos principios previamente aceptados. En el caso de los Elementos, los principios que se toman como punto de partida son veintitrés definiciones, cinco postulados y cinco axiomas o nociones comunes. El enorme magisterio de los Elementos se ha mantenido hasta hoy, pues buena parte de su contenido se sigue impartiendo en las escuelas; sin embargo, las aportaciones de la geometría moderna le han arrebatado la exclusividad: desde el siglo XIX se han definido geometrías consistentes, llamadas no euclidianas, a partir de la supresión o modificación del quinto axioma, el de las paralelas. Sin embargo, la misma denominación de estas variantes contemporáneas indica que, tanto para expertos como para novicios, el nombre Euclides se ha convertido en sinónimo de geometría.

Descubriendo el Parque de la Fuente del Berro José María Martín Fernández-Gallardo, 2024-04-25 El libro contiene la información más que suficiente, escrita y en imágenes, para identificar toda la variedad de tipos de cedros, cipreses, palmeras y acacias, así como para reconocer e identificar a otros muchos árboles y arbustos. Sería un buen reto para aquel lector que se propusiera encontrar en el parque, todos y cada uno de los ejemplares descritos.

La geometría de Alberto Durero Carlos Alberto Cardona Suárez, 2006 El presente libro se ha dado a la tarea de seguir con atención las propuestas y las fuentes que iluminan el tratado de geometría escrito por Durero. Le interesa establecer en forma clara las relaciones con la tradición italiana, las novedades y el impacto cercano de los trabajos del artista alemán. En algunos casos la labor de los autores se limita a elucidar algunas novedosas y complejas construcciones propuestas por el autor, en otros se exploran las conexiones y relaciones con propuestas ya existentes en la tradición italiana; en otros se aclaran los fundamentos euclidianos de las construcciones y se formulan las críticas correspondientes cuando la construcción de Durero se separa de los métodos ortodoxos; en otros más se advierten las limitaciones de algunas construcciones a la luz de desarrollos ulteriores de la geometría; y, por último, en algunos casos se explora el impacto de las ideas o de los temas tratados por Durero en el contexto de los desarrollos científicos de los siglos siguientes.

A Hombros de Gigantes Stephen Hawking, 2003 Este libro que el lector tiene en sus manos es una pieza única por su contenido y por quien lo ha compilado. En efecto, el gran científico Stephen Hawking ha reunido en él, por primera vez en la historia de la edición, las cinco obras que a su juicio representan el canon de la cultura universal en el campo de la Física y la Astronomía y ha escrito una introducción a cada una, explicando lo que han significado para la ciencia, vinculándolas entre sí y ofreciéndonos cinco soberbios retratos de los genios que las escribieron: * Nicolas Copérnico, Sobre las revoluciones de los orbes celestes. * Galileo Galilei, Diálogo sobre dos nuevas ciencias. * Johannes Kepler, Las armonías del mundo. * Isaac Newton, Principios matemáticos de la filosofía natural. * Albert Einstein, El principio de la relatividad.
