What is this thing called Philosophy? Duncan Pritchard, 2025-12-02 What is this thing called Philosophy? is the definitive textbook for all who want a thorough introduction to the field. It introduces philosophy using a question-led approach that reflects the discursive nature of the discipline. Edited by Duncan Pritchard, each section is written by a high-profile contributor focusing on a key area of philosophy, and contains three or four question-based chapters offering an accessible point of engagement. The core areas of philosophy introduced and explained are: Ethics Political Philosophy Aesthetics Epistemology Philosophy of Mind Philosophy of Language Metaphysics Philosophy of Science Philosophy of Religion The Meaning of Life This second edition has been revised throughout, with chapters being brought up to date and improved. There is also a new section on the philosophy of language and the addition of 'spotlight' questions at the end of each section, as well as an updated Introduction and Glossary of Key Terms. An outstanding textbook written by experienced teachers, What is this thing called Philosophy? is ideal for students approaching philosophy for the first time.

**Talking to Writers** Dean Nelson, 2025-11-13 Am I a writer? Where should I get ideas? Is my writing any good? How did my favorite authors make it big? The act of writing is a daunting task for many people, and becoming a “writer” means so much more than putting pen to paper. Dean Nelson embraces the questions that plague writers by turning to some of the best-known authors of our time. With encouragement, advice, and refreshing honesty, writers discuss their own beginnings, struggles, and victories in a manner that will make readers say, “I can do that.” In Talking to Writers: The Craft of Fiction, readers will hear from Ray Bradbury about why everyone should write, Alice Walker about writing with courage, Nick Hornby about creating dialogue, Anthony Doerr about getting ideas, and Amy Tan about discipline. Among the many other featured writers are Joyce Carol Oates, Jane Smiley, Don Winslow, Amor Towles, Billy Collins, and more. Bringing together interviews from 30 years of the annual Writer's Symposium by the Sea, Nelson reveals writers' motives, connects the dots to their past, and acknowledges their struggles. Often beginning with, “I've never said this publicly before...”, these treasured

authors' revelations give aspiring writers of every level the courage and support necessary to live the writing life.

Discourses on Algebra Igor R. Shafarevich, 2012-12-06 I wish that algebra would be the Cinderella of our story. In the mathematics program in schools, geometry has often been the favorite daughter. The amount of geometric knowledge studied in schools is approximately equal to the level achieved in ancient Greece and summarized by Euclid in his *Elements* (third century B. C. ). For a long time, geometry was taught according to Euclid; simplified variants have recently appeared. In spite of all the changes introduced in geometry courses, geometry retains the influence of Euclid and the inclination of the grandiose scientific revolution that occurred in Greece. More than once I have met a person who said, I didn't choose math as my profession, but I'll never forget the beauty of the elegant edifice built in geometry with its strict deduction of more and more complicated propositions, all beginning from the very simplest, most obvious statements! Unfortunately, I have never heard a similar assessment concerning algebra. Algebra courses in schools comprise a strange mixture of useful rules, logical judgments, and exercises in using aids such as tables of log arithms and pocket calculators. Such a course is closer in spirit to the brand of mathematics developed in ancient Egypt and Babylon than to the line of development that appeared in ancient Greece and then continued from the Renaissance in western Europe. Nevertheless, algebra is just as fundamental, just as deep, and just as beautiful as geometry.
