Phenolic Compounds Marcos Soto-Hernández,Mariana Palma Tenango,Rosario García-Mateos,2017-03-15 Phenolic compounds as a large class of metabolites found in plants have attracted attention since long time ago due to their properties and the hope that they will show beneficial health effects when taken as dietary supplements. This book presents the state of the art of some of the natural sources of phenolic compounds, for example, medicinal plants, grapes or blue maize, as well as the modern methods of extraction, quantification, and identification, and there is a special section discussing the treatment, removal, and degradation of phenols, an important issue in those phenols derived from the pharmaceutical or petrochemical industries.

Chemical Catalysts for Biomass Upgrading Mark Crocker,Eduardo Santillan-Jimenez,2020-03-09 A comprehensive reference to the use of innovative catalysts and processes to turn biomass into value-added chemicals Chemical Catalysts for Biomass Upgrading offers detailed descriptions of catalysts and catalytic processes employed in the synthesis of chemicals and fuels from the most abundant and important biomass types. The contributors?noted experts on the topic?focus on the application of catalysts to the pyrolysis of whole biomass and to the upgrading of bio-oils. The authors discuss catalytic approaches to the processing of biomass-derived oxygenates, as exemplified by sugars, via reactions such as reforming, hydrogenation, oxidation, and condensation reactions. Additionally, the book provides an overview of catalysts for lignin valorization via oxidative and reductive methods and considers the conversion of fats and oils to fuels and terminal olefins by means of esterification/transesterification, hydrodeoxygenation, and decarboxylation/decarbonylation processes. The authors also provide an overview of conversion processes based on terpenes and chitin, two emerging feedstocks with a rich chemistry, and summarize some of the emerging trends in the field. This important book: -Provides a comprehensive review of innovative catalysts, catalytic processes, and catalyst design -Offers a guide to one of the most promising ways to find useful alternatives for fossil fuel resources -Includes information on the most abundant and important types of biomass feedstocks -Examines fields such as catalytic cracking, pyrolysis, depolymerization, and many more Written for catalytic chemists, process engineers, environmental chemists, bioengineers, organic chemists, and polymer chemists, Chemical Catalysts for Biomass Upgrading presents deep insights on the most important aspects of biomass upgrading and their various types.

Biorefineries Kurt Wagemann,Nils Tippkötter,2018-12-06 This book offers a comprehensive review on biomass resources, examples of biorefineries and corresponding products. The first part of this book covers topics such as different biorefinery resources from agriculture, wood processing residues and transport logistics of plant biomass. In the second part, expert contributors present biorefinery concepts of different biomass feedstocks, including vegetable-oils, sugarcane, starch, lignocellulose and microalgae. Readers will find here a summary of the syngas utilization and the bio-oil characterization and potential use as an alternative renewable fuel and source for chemical feedstocks. Particular attention is also given to the anaerobic digestion-based and Organosolv biorefineries. The last part of the book examines relevant products and components such as alcohols, hydrocarbons, bioplastics and lignin, and offers a sustainability evaluation of biorefineries.

Biotransformation of Agricultural Waste and By-Products Palmiro Poltronieri,Oscar Fernando D'Urso,2016-03-01 Biotransformation of Agricultural Waste and By-Products in the 4F Economy: The Food, Feed, Fiber, Fuel (4F) Economy presents an evaluation of plant species better exploitable for a particular transformation. As crops are already covering large parts of cultivable soils, it is not conceivable to try to extend the cultures beyond the limit of available soils, but a further increase in productivity is not easy to obtain. The book discusses advances in technology and plants design which support the exploitation and valorization of vegetable and fruit by-products through fermentation (feed-batch liquid fermentation, solid-state fermentation) in bio-based bio-chemicals/biofuels production. Pathways in the biosynthesis of fibers, sugars, and metabolites are provided with a focus on the lifecycle of bacteria, yeasts, and even plant species. The text analyzes cellular structures and the organization of cell walls in order to show which polysaccharides offer more favorable fermentative processes and which are detrimental. - Provides an overview of all plant based biosources - Includes examples of biochemical/biofuel production from plant waste - Discusses the production of enzymes used in the plant fermentation processes - Explores the new fermentation technologies and production of chemicals and fuels from various plants

Recent Perspectives in Pyrolysis Research Mattia Bartoli,Mauro Giorcelli,2022-04-13 Recent Perspectives in Pyrolysis Research presents and discusses different routes of pyrolytic conversions. It contains exhaustive and comprehensive reports and studies of the use of pyrolysis for energy and materials production and waste management.

Bioenergy: Principles and Technologies Zhenhong Yuan,2017-12-18 The second part of Bioenergy: Principles and Technologies continues the discussion of biomass energy technologies covering fuel ethanol production, pyrolysis, biomass-based hydrogen production and fuel synthesis, biodiesel, municipal solid waste treatment and microbial fuel cells. With a combination of theories, experiments and case studies, it is an essential reference for bioenergy researchers, industrial chemists and chemical engineers.

Brassica Oilseeds D. S. Kimber,D. I. McGregor,C.A.B. International,1995 Brassica oilseeds are one of the few edible oil crops that can be cultivated in the temperate zones of the world, at higher elevations and as winter crops. This

comprehensive volume encompasses research and practice in the production and use of Brassica oilseeds. The first section considers each aspect of the field crop including the importance of plant breeding and biotechnology. The impact of the crop on the surrounding environment is also discussed. The second section covers utilization. This is especially important as rapeseed oil has gained high nutritional status in recent years, and this is considered in relation to the human diet. The use of the meal by-product for animal feeds is also discussed. The oil is also used for industrial purposes and derivatives are used in pharmaceuticals and cosmetics. The increased interest in the production and use of biodiesel from Brassica oilseeds is reflected by the inclusion of a chapter on this topic. The contributors are leading specialists from North America, Europe and Australia. The book provides a complete reference resource for students, researchers and practitioners within the disciplines of crop production, plant and food sciences

Grassland Carbon Sequestration M. T. Abberton,Richard Theodore Conant,Caterina Batello,2010 This book profiles 13 contributions by some of the world's most active scientists on the subject of measuring soil carbon in grassland systems and sustainable grassland management practices. While many different aspects of carbon sequestration in grasslands are covered, many gaps in our knowledge are also revealed, and it is hoped that this book will promote discussion, prompt further research, contribute to develop global and national grassland strategies and contribute to sustainable production intensification.
