## Céline Boutantin

Terres cuites et culte domestique Céline Boutantin, 2013-11-29 In Terracotta and domestic worship. Bestiary of the Graeco-Roman Egypt, Celine Boutantin proposes a new approach of terracotta produced in Egypt in the Greco-Roman period. A study taking into account the archaeological contexts allows to propose a synthesis of production workshops and to show, in some cases, an adaptation of the production of local cults. An inventory of figurines found in homes, temples and tombs allow to study the functions of these objects. Through the study of a particular theme, animal terracottas, the author raises questions about beliefs and personal or private practices. Dans Terres cuites et culte domestique. Bestiaire de l'Égypte gréco-romaine, Céline Boutantin propose une nouvelle approche des figurines en terre cuite produites en Égypte à l'époque gréco-romaine. Une étude prenant en compte les contextes archéologiques permet de dresser un bilan des ateliers de production et de montrer, dans certains cas, une adaptation de la production à des cultes locaux. Elle permet aussi de dresser un inventaire des figurines trouvées dans les maisons, les sanctuaires et les tombes et de proposer une synthèse sur les fonctions de ces objets. A travers l'étude d'un thème particulier, les représentations animales, l'auteur aborde sous un angle nouveau la question des croyances et des pratiques personnelles ou privées.

**Matériau, matière d'architecture soutenable** Sophie Trachte, 2012-07-15 Cette thèse questionne les enjeux des matériaux dans la conception de l'architecture soutenable. Le matériau de construction joue un rôle prépondérant en répondant à des exigences de protection, de confort et de performances techniques tout en favorisant un langage architectural et des sensations. Mais le rôle des matériaux dépasse la notion d'image ou de performance : il doit aujourd'hui répondre à des exigences de préservation des ressources, d'impact environnemental et sanitaire mais aussi à des exigences de réutilisation ou de recyclage. La question du choix est abordée suivant une approche : - prospective, car elle tient compte à la fois des impacts environnementaux et sanitaires scientifiquement avérés et « présumés » ; - globale, car elle tient compte de l'ensemble des étapes du cycle de vie des matériaux et du bâtiment ; - multidisciplinaire, car elle développe autour du matériau de construction, des aspects sensibles, scientifiques, historiques, industriels, techniques, environnementaux, sanitaires, etc ; Cette vision holistique du matériau permet d'élargir le champ des considérations en conjuguant les trois matérialités d'un matériau : matérialités visible, intrinsèque et soutenable.
