*Veterinary Public Health: Veterinary Medicine's Current Challenges in a Globalised World* Diana Meemken, Ivan Nastasijevic, Reinhard Fries, Suporn Thongyuan, 2025-03-21 The transfer of zoonotic agents leading to diseases and epidemics is well known, as well as the role played by human activity in the transmission of such agents. Veterinary Public Health (VPH) has an essential role keeping transmissible diseases under control and it involves different disciplines and the application of different techniques. VPH has generally a local and regional focus in sample collection. Disease's detection may be limited to specific areas. Despite this aspect of VPH, the importance of exchanging data, discoveries and information cannot be overlooked due to the everchanging landscape in global trade, transboundary diseases and extended animal movements. On a local scale VPH needs often to face different challenges, starting with the infrastructures for live stocks down to optimization, using new technologies as Artificial Intelligence. There are instances where veterinary services are not readily available and temporary solutions need to be found as for example paraveterinary services. The latter should be guaranteed by adequate professional training along the different stages of, as an example, the food chain production. Given the transboundary nature of zoonotic agents and diseases in the last decades, the One-Health approach has emerged as a new and holistic approach to incorporate the different facets of Veterinary Science. To strengthen this approach, veterinary training should eventually dedicate more attention to public health and to preventive measures of zoonosis and epidemics. This renewed focus will also have the additional benefit of defining more clearly the discipline of VPH. Human Public Health, with the same philosophy, should include the animal ecosphere, emerging diseases and zoonoses, focusing on the 'Human-Animal Interface'.

This book provides specific instructions for the ultrasonographic examination of individual joints and describes particular anatomical landmarks of each region as a guide. In over 300 illustrations, international specialists present normal sonoanatomical findings and sonopathological findings of common diseases. Ultraschall neu interpretiert Die Ultraschalluntersuchung am Bewegungsapparat des Rindes ist an veterinärmedizinischen Kliniken weltweit als Routine-Untersuchung etabliert. **Go with the Vet-Flow! The Current Uses and New Frontiers of Flow Cytometry in Veterinary Sciences** Fulvio Riondato, Francesco Grandoni, Alberto Alvarez-Barrientos, 2025-04-10 Flow cytometry (FC) is a powerful and flexible technology that allows the multiparametric characterization of single cells or small particles. In humans, it is currently used in basic research and diagnosis in oncology, immunology, and haematology. In the veterinary field it has steadily grown in the last decades for diagnosing and characterizing lymphomas and leukaemias in pets. Furthermore, FC is applied in

different areas of possible veterinary interest such as microbiology, virology, pharmacology, reproduction, farm and marine animals, wildlife, aquaculture, food production and control, and more. Finally, it can set or expand its usefulness in different fields with applications aimed, for instance, to help diagnostic/prognostic evaluations in clinical settings, checking the health/welfare status of animals, screening for specific diseases, improving feed quality, vaccine development, warrant food health. Nevertheless, veterinary FC still has critical limitations, such as the availability of reagents and instruments in the field, particularly fluorescent monoclonal antibodies, and the low uptake of the latest technological innovations (imaging or spectral flow cytometry, mass cytometry).
