**The Oxford Handbook of Music and Disability Studies** Blake Howe, Stephanie Jensen-Moulton, Neil William Lerner, Joseph Nathan Straus, 2016 Like race, gender, and sexuality, disability is a social and cultural construction. Music, musicians, and music-making simultaneously embody and shape representations and narratives of disability. Disability -- culturally stigmatized minds and bodies -- is one of the things that music in all times and places can be said to be about.

**Music Therapy and the Autism Spectrum** Gustavo Schulz Gattino, 2022-08-22 Music Therapy and the Autism Spectrum: An Integrative Overview summarizes the main topics related to the practice of music therapy for autistic people. This integrative perspective emphasizes respect for the voices of this community and highlights those who have contributed to the growth of music therapy practices for autistic people. The publication gives a historical contextualization of each topic and an up-to-date understanding of current discussions in this area of practice. The term integrative is also used to emphasize that the book integrates music therapy topics and knowledge from other areas including neurology, life development, and psychology. Although the primary focus is on music therapists and music therapy students, the book can also be read by autistic people and their families, professionals in other fields, and anyone interested in the topic. The book is organized into four central units concerning the themes related with music therapy and the autism spectrum: 1) Beginning the Studies, 2) Fundamental Aspects of Music Therapy Practice, 3) The Spectrum of Theories and Practices in the Field of Music Therapy and the Autism Spectrum and 4) Relevant Themes.

**Music Therapy as a Treatment Tool for Autistic Children** Michael H. Thaut, 1980

**Children with Autism** Colwyn Trevarthen, 1998 This completely revised and substantially expanded new edition embraces new developments in this rapidly developing field. Every chapter has been rewritten with the addition of new material, and a new final chapter on 'Putting the Pieces Together' reflects the authors' conviction that the complexity of autism means that many kinds of information are valuable and need to be taken into account in providing therapy or teaching for children with autism. Other chapters, updated from the first edition, include a description of the latest information on the

findings of brain research (put into the context of the development of the human brain and its effect on communication in early childhood), and the contributions of music therapy and psychoanalysis. A very much enlarged chapter on educational provision for children with autism and Asperger's Syndrome provides information on the latest methods for improving the learning of these children, to give them the best possible preparation for a life of greater autonomy and maximum self-satisfaction in the pleasure of human company. New appendices summarise medical diagnostic systems, checklists and questionnaires for identifying autism, and the glossary has been considerably expanded. The wealth of up-to-date information provided will be invaluable not only for researchers and students but also for psychologists, teachers and other professionals, and parents, carers and family members in search of comprehensive and helpful information.

Music-centered Music Therapy Kenneth Aigen, 2005 An ambitious and long-awaited text that sets out the basic practices and principles of approaches to music therapy that place music and music experience in a central role. The text provides a philosophical and practical rationale for music experience as a legitimate goal of clinical music therapy. An historical account is given of music-centered thinking in music therapy and the manifestation of this way of thinking in various contemporary music therapy models. The latter part of the book develops the specifics of a particular music-centered theory that is meant to be applicable across different domains of treatment. This book is essential for readers interested in the development of theory in music therapy, for music-centered practitioners who have been searching for a vocabulary and conceptual framework in which to articulate their clinical approach, and for anyone interested in the intrinsic value of music experience for human development.

**Autism: The Movement (Sensing) Perspective a Decade Later** Elizabeth B. Torres, Jonathan T. Delafield-Butt, Vikram K. Jaswal, Susan Crawford, Ashok Srinivasan, Brittany Travers, 2025-08-19 A decade ago, in 2013, the Research Topic Autism the Movement Perspective, proposed the radical idea that using movement and its sensations could help us better understand the many complex layers of autism spectrum disorders. Inspired by earlier work from other fields, the work positioned front and center approaches from neuromotor control, infusing the research with new computational ideas to study autism across the human lifespan. Through the lens of motor variability as a form of kinesthetic reafference, causal inference and predictive codes, the Research Topic brought together a group of researchers, parents, practitioners, and self-advocates to rethink autism as sensory motor differences contributing to the emergence of powerful coping mechanisms that advanced our understanding of how the human brain develops and functions. Today, with new improvements in biosensing technologies, and neuroscience, and the embodied and affective psychology on which development is based, we revisit this Research Topic, approaching autism anew through a modernized lens of precision aimed at enabling socio-motor agency.

**Child and Adolescent Therapy** David A. Lane, Andy Miller, 1992 An overview of current developments in child and

adolescent therapy. It presents diverse practice in multiple settings; it looks at the changing agenda for therapy, and the evaluation of interventions; and explores the challenges in play therapy for the management of trauma.

**The Effect of Improvisational Music Therapy on the Communicative Behaviors of Autistic Children** Cindy Lu Edgerton, 1993 Clinicians, researchers, and educators have studied extensively the communication deficits of people diagnosed with autism and have commented frequently on their unusual responsiveness to music. The purpose of this study was to determine the effectiveness of improvisational music therapy, based on Nordoff and Robbins' (1977) Creative Music Therapy approach, on autistic children's communicative behaviors. Eleven autistic children, ranging in age from 6 to 9 years, participated in individual improvisational music therapy sessions for a period of ten weeks. A reversal design was applied. The Checklist of Communicative Responses/Acts Score Sheet (CRASS), designed specifically for this study, was used to measure the subjects' musical and nonmusical communicative behaviors. Results strongly suggest the efficacy of improvisational music therapy in increasing autistic children's communicative behaviors. Significant differences were found between the subjects' first session CRASS scores and those of their last sessions (p

*Musical Creativity* Irène Deliège, Geraint A. Wiggins, 2006-10-16 This collection initiates a resolutely interdisciplinary research dynamic specifically concerning musical creativity. Creativity is one of the most challenging issues currently facing scientific psychology and its study has been relatively rare in the cognitive sciences, especially in artificial intelligence. This book will address the need for a coherent and thorough exploration. *Musical Creativity: Multidisciplinary Research in Theory and Practice* comprises seven sections, each viewing musical creativity from a different scientific vantage point, from the philosophy of computer modelling, through music education, interpretation, neuroscience, and music therapy, to experimental psychology. Each section contains discussions by eminent international specialists of the issues raised, and the book concludes with a postlude discussing how we can understand creativity in the work of eminent composer, Jonathan Harvey. This unique volume presents an up-to-date snapshot of the scientific study of musical creativity, in conjunction with ESCOM (the European Society for the Cognitive Sciences of Music). Describing many of the different aspects of musical creativity and their study, it will form a useful springboard for further such study in future years, and will be of interest to academics and practitioners in music, psychology, cognitive science, artificial intelligence, neuroscience and other fields concerning the study of human cognition in this most human of behaviours.

Arts - Therapies - Communication Line Kossolapow, Sarah Scoble, Diane Waller, 2003 Arts - Therapies - Communication is
