D Keegan

Analyse numérique et optimisation Grégoire Allaire, 2005 Ce livre est issu d'un cours enseigné à l'École Polytechnique dont l'objectif, au delà de la présentation de l'analyse numérique et de l'optimisation, est d'introduire les étudiants au monde de la modélisation mathématique et de la simulation numérique. La modélisation et la simulation ont pris une importance considérable ces dernières décennies dans tous les domaines de la science et des applications industrielles (ou sciences de l'ingénieur). En effet, depuis leur apparition au lendemain de la seconde guerre mondiale les ordinateurs ont profondément transformé les mathématiques en en faisant une science expérimentale : on fait des « expériences numériques » (des calculs sur ordinateurs) comme d'autres font des expériences physiques. L'analyse numérique est justement la discipline qui conçoit et analyse les méthodes ou algorithmes de calcul. La simulation numérique permet aux mathématiciens de s'attaquer à des problèmes beaucoup plus complexes et concrets qu'auparavant, issus de motivations immédiates industrielles ou scientifiques, auxquels on peut apporter des réponses à la fois qualitatives mais aussi quantitatives : c'est la modélisation mathématique. Remarquons qu'à côté des champs d'applications traditionnels que sont la chimie, le mécanique et la physique se sont ouverts de nouvelles perspectives en biologie, environnement, finance, médecine et sciences sociales. Par ailleurs, l'ingénieur ou le scientifique qui a réussi à simuler numériquement son problème ne s'arrête pas en si bon chemin: il veut ensuite pouvoir intervenir sur certains paramètres pour améliorer ou optimiser le fonctionnement, le rendement, ou la réponse d'un système en maximisant (ou minimisant) des fonctions associées. C'est précisément le but de l'optimisation qui fournit des outils théoriques ou numériques pour ce faire. L'analyse numérique et l'optimisation sont donc deux outils essentiels et complémentaires de la modélisation mathématique. Des travaux pratiques de simulation numérique à l'aide des logiciels Scilab et FreeFem++ accompagnent cet ouvrage et sont disponibles sur le site web <http://www.cmap.polytechnique.fr/~allaire/>

Le problème du sac à dos multidimensionnel Collectif, 2018-02-28 Le problème du sac à dos plusieurs contraintes est un problème classique de l'optimisation appartenant à la classe des problèmes NP-difficiles. On le retrouve notamment sous la forme de sous-problème de nombreux problèmes d'optimisation combinatoire. Les méthodes classiques de résolution exacte telles que la programmation dynamique ou le branch-and-bound ont été traitées abondamment dans la littérature. Elles présentent néanmoins des faiblesses si elles sont utilisées telles quelles, d'où l'idée de faire coopérer ces méthodes en tirant profit

de leurs spécificités afin de proposer soit des méthodes heuristiques performantes, soit des méthodes exactes plus efficaces. Les approches heuristiques que nous proposons sont comparées d'autres heuristiques de la littérature. Notre méthode coopérative est, quant elle, comparée à un algorithme de branch-and-bound. L'ensemble de ces tests numériques ont été menés pour diverses instances plus ou moins difficiles de la littérature ainsi que sur des instances engendrées aléatoirement.

Mathématiques pour l'informatique Salim Haddadi, 2023-11-21 Les modèles et méthodes mathématiques sont indispensables à l'informatique pour appréhender et analyser les problèmes auxquels elle se confronte. Cet ouvrage propose : les notions élémentaires : les propositions logiques, les ensembles...les concepts plus évolués : l'induction, les coefficients du binôme, les suites et les séries...une série d'exercices de difficultés inégales à la fin de chaque chapitre. Plusieurs annexes sont destinées à aider à la compréhension de certains passages du livre sous forme de rappels ou de brèves introductions au sujet traité. Il est destiné à un public universitaire de niveau avancé en Licence et en Master. Les domaines ciblés sont essentiellement : Mathématiques-Informatique, Ingénierie, Économie, Management.

Optimisation combinatoire: Graphes et programmation linéaire Michel Sakarovitch, 1984 L'optimisation combinatoire traite des problèmes - apparemment dépourvus de mystère - dans lesquels on a à extraire un meilleur élément (de coût minimum, par exemple) d'un ensemble fini. Un instant de réflexion montre que la plupart des problèmes concrets d'optimisation appartiennent effectivement à cette classe ou peuvent se formuler de cette manière. Quoique fini, l'ensemble objet de l'étude comporte en général un grand nombre d'éléments (par rapport au nombre de données du problème). C'est ce phénomène qui, en interdisant la solution par énumération de toutes les solutions possibles, rend la problématique de l'optimisation combinatoire non triviale : on est amené à mettre en évidence certaines structures du modèle étudiées et à élaborer différentes méthodes de solution. Cet ouvrage présente l'ensemble de ces techniques très diverses [...]. Ce premier volume est un traité des deux disciplines fondamentales de l'optimisation combinatoire : la théorie des graphes, moyen puissant d'investigation des structures combinatoires et la programmation linéaire, outil de modélisation d'un grand nombre de situations concrètes ayant suscité la création d'une technique algorithmique - la méthode du simplexe - d'une grande richesse conceptuelle et d'une extraordinaire efficacité pratique. Parallel Processing and Applied Mathematics Roman Wyrzykowski,Jack Dongarra,Marcin Paprzycki,Jerzy Wasniewski,2003-08-01 This book constitutes the thoroughly refereed post-proceedings of the 4th International Conference on Parallel Processing and Applied Mathematics, PPAM 2002, held in Naleczow, Poland, in September 2001. The 101 papers presented were carefully reviewed and improved during two rounds of reviewing and revision. The book offers topical sections on distributed and grid architectures, scheduling and load balancing, performance analysis and prediction, parallel non-numerical algorithms, parallel programming, tools and environments, parallel numerical algorithms, applications, and evolutionary computing and neural networks.
