

Structures On The Far Side Of The Moon

LM Reder

The Moon's Near Side Megabasin and Far Side Bulge Charles Byrne, 2014-02-01 Since Luna and Lunar Orbiter photographed the far side of the Moon, the mysterious dichotomy between the face of the Moon as we see it from Earth and the side of the Moon that is hidden has puzzled lunar scientists. As we learned more from the Apollo sample return missions and later robotic satellites, the puzzle literally deepened, showing asymmetry of the crust and mantle, all the way to the core of the Moon. This book summarizes the author's successful search for an ancient impact feature, the Near Side Megabasin of the Moon and the extensions to impact theory needed to find it. The implications of this ancient event are developed to answer many of the questions about the history of the Moon.

New View of the Moon 2 Clive R. Neal, Lisa R. Gaddis, Bradley L. Jolliff, Samuel J. Lawrence, Stephen J. Mackwell, Charles K. Shearer, Sarah N. Valencia, 2024-05-06 Much has happened in the world in the 17 years since the first New Views of the Moon was published as volume 60 of the Mineralogical Society of America in 2006. An exciting new era of lunar exploration has begun, including the promise of resuming human lunar exploration, exploring the lunar Poles, and missions to many other high-priority science targets. It is fitting, therefore, to now summarize the current state of knowledge to the degree possible at a time when advancements in knowledge of the Moon are proceeding at a breakneck pace. Therefore, during this period of unprecedented lunar exploration activity, and as we continue to rebound from a global pandemic, we now happily announce this New Views of the Moon 2 volume summarizing the advances in lunar science and exploration since 2006. The

Steering Committee is eternally grateful to all contributors and especially the chapter leads, and to Professor Makiko Ohtake (University of Aizu, Japan) and Dr. David Blewett (Johns Hopkins University Applied Physics Laboratory, U.S.A.) for organizing the New Views of the Moon 2 Electronic Annex. We deeply appreciate the hard work and dedication of everyone involved in the production of this volume, especially Rachel Russell and Ian Swainson at the Mineralogical Society of America. This volume helps to frame our knowledge and expectations for an exciting future of lunar science and exploration and the new discoveries to be made. Having humans return to the Moon now seems more likely than it ever has since the last humans left the Moon on 14 December 1972.

Essential Atlas of Astronomy Parramon Studios, 2002-08-01 This good-looking, information-packed atlas has been designed with space-age skywatchers in mind. It's filled with full-color photos, sky charts, and vivid full-color art renditions of objects in outer space. Diagrams and illustrations explain the origins of the universe and our solar system. Photos taken from powerful telescopes capture visions of comets, nebulae, stars being born, distant galaxies, the surface of our Sun, and the earth's neighboring planets. The composition of the Earth, as well as other planets, is shown and discussed. Also shown and explained are both ancient and modern telescopes, including giant, state-of-the-art radiotelescopes located in various parts of the world. The book's final section shows and discusses the history of space exploration, starting with early twentieth-century experiments in rocket science, and extending to the international manned space station currently under construction. Here's a great volume for amateur astronomers of all ages, and a fine textbook supplement for high school science classes.

Exploration of Terrestrial Planets from Spacecraft И. У. Ри́ Aleksandrovich Surkov, 1997 This book is divided into two parts. In Part I, the author describes the evaluation of the Solar System from the earliest stages to the formation of the planets and differentiation of their material. He then discusses the nature, composition and properties of Mercury, Venus, the Moon and Mars and several planetary satellites. In Part II, the author gives a comprehensive overview of the methods and instrumentation which have been utilized in spacecraft studies of these bodies, including gamma-ray and X-ray spectrometry, neutronmetry, alpha-particle spectrometry and mass spectrometry.
