Cybersecurity Federico Bergamasco, Roberto Cassar, Rada Popova, 2020-07-09 Cybersecurity Key Legal Considerations for the Aviation and Space Sectors Federico Bergamasco, Roberto Cassar, Rada Popova & Benjamyn I. Scott As the aviation and space sectors become ever more connected to cyberspace and reliant on related technology, they become more vulnerable to potential cyberattacks. As a result, cybersecurity is a growing concern that all stakeholders in both sectors must consider. In this forward-looking book, which is the first comprehensive analysis of the relevant facets of cybersecurity in the aviation and space sectors, the authors explore the vast spectrum of relevant international and European Union (EU) law, with specific attention to associated risks, existing legal provisions and the potential development of new rules. Beginning with an overview of the different types of malicious cyber operations, the book proceeds to set the terminological landscape relevant to its core theme. It takes a top-down approach by first analysing general international and EU law related to cybersecurity, then moving to the more specific aspects of the aviation and space sectors, including telecommunications. Finally, the salient features of these analyses are combined with the practical realities in the relevant industries, giving due regard to legal and regulatory initiatives, industry standards and best practices. The broad range of issues and topics covered includes the following and more: whether the various facets of the international law on conflict apply in cyberspace and to cyberattacks; substantial policy and regulatory developments taking place at the EU level, including the activities of its relevant institutions, bodies and entities; jurisdiction and attributability issues relevant to cybersecurity in the aviation and space sectors; vulnerability of space systems, including large constellations, to malicious cyber activities and electromagnetic interference; various challenges for critical infrastructure resulting from, e.g., its interdependency, cross-border nature, public-private ownership and dual civil-military uses; safety and security in international air transportation, with special attention to the Chicago Convention and its Annexes; aviation liability and compensation in cases of cyberattacks, and insurance coverage against cyber risks; review of malicious relevant actors, malicious cyber operations, the typical life cycle of a cyberattack and industry responses. This book clearly responds to the need to elaborate adequate legal rules for ensuring that the multiple inlets for malicious cyber operations and the management of cybersecurity risks are addressed appropriately. It will be welcomed by all parties involved with aviation and space law and policy, including lawyers, governments, regulators, academics, manufacturers, operators, airports, and international governmental and non-governmental organisations.

Big Data Technologies for Monitoring of Computer Security: A Case Study of the Russian Federation Sergei Petrenko, 2018-05-17 This timely book offers rare insight into the field of cybersecurity in Russia -- a significant player with regard to cyber-attacks and cyber war. Big Data Technologies for Monitoring of Computer Security presents possible solutions to the relatively new scientific/technical problem of developing an early-warning cybersecurity system for critically important governmental information assets. Using the work being done in Russia on new information security systems as a case study, the book shares valuable insights gained during the process of designing and constructing open segment prototypes of this system. Most books on cybersecurity focus solely on the technical aspects. But Big Data Technologies for Monitoring of Computer Security demonstrates that military and political considerations should be included as well. With a broad market including architects and research engineers in the field of information security, as well as managers of corporate and state structures, including Chief Information Officers of domestic automation services (CIO) and chief information security officers (CISO), this book can also be used as a case study in university courses.

The New School of Information Security Adam Shostack, Andrew Stewart, 2008-03-26 "It is about time that a book like *The New School* came along. The age of security as pure technology is long past, and modern practitioners need to understand the social and cognitive aspects of security if they are to be successful. Shostack and Stewart teach readers exactly what they need to know--I just wish I could have had it when I first started out." --David Mortman, CSO-in-Residence Echelon One, former CSO Siebel Systems Why is information security so dysfunctional? Are you wasting the money you spend on security? This book shows how to spend it more effectively. How can you make more effective security decisions?

This book explains why professionals have taken to studying economics, not cryptography--and why you should, too. And why security breach notices are the best thing to ever happen to information security. It's about time someone asked the biggest, toughest questions about information security. Security experts Adam Shostack and Andrew Stewart don't just answer those questions--they offer honest, deeply troubling answers. They explain why these critical problems exist and how to solve them. Cyber Security Noah Zhang, 2019-10-07 Cyber Security Is Here To Stay Do you often wonder how cyber security applies to your everyday life, what's at risk, and how can you specifically lock down your devices and digital trails to ensure you are not Hacked? Do you own a business and are finally becoming aware of how dangerous the cyber threats are to your assets? Would you like to know how to quickly create a cyber security plan for your business, without all of the technical jargon? Are you interested in pursuing a career in cyber security? Did you know that the average starting ENTRY salary of a cyber security professional ranges from \$65,000 to \$80,000 and jumps to multiple figures in a few years, depending on how far you want to go? Here is an interesting statistic, you are probably already compromised. Yes, at some point, one of your digital devices or activities has been hacked and your information has been sold to the underground market. If you knew how bad the threats really are online, you would never go online again or you would do everything possible to secure your networks and devices, especially at home....and we're not talking about the ads that suddenly pop up and follow you around everywhere because you were looking at sunglasses for sale on Google or Amazon, those are re-targeting ads and they are totally legal and legitimate...We're talking about very evil malware that hides deep in your device(s) watching everything you do and type, just as one example among many hundreds of threat vectors out there. Why is This Happening Now? Our society has become saturated with internet-connected devices and trackers everywhere. From home routers to your mobile phones, most people AND businesses are easily hacked if targeted. But it gets even deeper than this; technology has advanced now to where most hacks are automated by emerging A.I., by software. Global hackers have vast networks and computers set up to conduct non-stop scans, pings and probes for weaknesses in millions of IP addresses and network domains, such as businesses and residential home routers. Check your router log and you'll see it yourself. Now most devices have firewalls but still, that is what's called an persistent threat that is here to stay, it's growing and we all need to be aware of how to protect ourselves starting today. In this introductory book, we will cover verified steps and tactics on how to increase the level of Cyber security in an organization and as an individual. It sheds light on the potential weak points which are used as infiltration points and gives examples of these breaches. We will also talk about cybercrime in a technologically-dependent world ..(Think IoT) Cyber security has come a long way from the days that hacks could only be perpetrated by a handful of

individuals, and they were mostly done on the larger firms or government databases. Now, everyone with a mobile device, home system, car infotainment, or any other computing device is a point of weakness for malware or concerted attacks from hackers, real or automated. We have adopted anti-viruses and several firewalls to help prevent these issues to the point we have become oblivious to the majority of the attacks. The assistance of malware blocking tools allows our computing devices to fight thousands of attacks per day. Interestingly, cybercrime is a very lucrative industry, as has been proven by the constant investment by criminals on public information. It would be wise to pay at least half as much attention to your security. What are you waiting for, scroll to the top and click the Buy Now button to get started instantly!
