Fundamentals of Physics, Part 1 David Halliday, Robert Resnick, Jearl Walker, Karen Cummings, 2000-07-14

Fundamentals of Physics, Extended David Halliday, Robert Resnick, Jearl Walker, 2013-08-13 The 10th edition of Halliday's Fundamentals of Physics, Extended building upon previous issues by offering several new features and additions. The new edition offers most accurate, extensive and varied set of assessment questions of any course management program in addition to all questions including some form of question assistance including answer specific feedback to facilitate success. The text also offers multimedia presentations (videos and animations) of much of the material that provide an alternative pathway through the material for those who struggle with reading scientific exposition. Furthermore, the book includes math review content in both a self-study module for more in-depth review and also in just-in-time math videos for a quick refresher on a specific topic. The Halliday content is widely accepted as clear, correct, and complete. The end-of-chapters problems are without peer. The new design, which was introduced in 9e continues with 10e, making this new edition of Halliday the most accessible and reader-friendly book on the market. WileyPLUS sold separately from text.

Fundamentals of Physics, Volume 1 David Halliday, Robert Resnick, Jearl Walker, 2017-12-11 The first volume of a two-volume text that helps students understand physics concepts and scientific problem-solving Volume 1 of the Fundamentals of Physics, 11th Edition helps students embark on an understanding of physics. This loose-leaf text covers a full range of topics, including: measurement, vectors, motion, and force. It also discusses energy, rotation, equilibrium, gravitation, and oscillations as well temperature and heat. The First and Second Law of Thermodynamics are presented, as is the Kinetic Theory of Gases. The text problems, questions, and provided solutions guide students in improving their problem-solving skills.

Ways of Learning and Knowing Hugh G. Petrie, 2012-08 Hugh Petrie, the author of the chapters in this anthology, spent his entire professional life as a philosopher, philosopher of education, and educational administrator fascinated by the questions of how we learn and how we know what we learn. The chapters in this anthology are selected from the articles and book chapters he published during his career. They include critiques of behaviorism and its supposed relevance to educational practice, analyses of the issues involved with interdisciplinary education, the nature of conceptual change, the role of metaphor as an essential component in learning anything radically new, a thorough-going examination of current

educational testing dogma, and several discussions of the importance of ways of knowing for various educational policy issues. The works are informed throughout by the insights of evolutionary epistemology and Perceptual Control Theory. These two under-appreciated approaches show how an adaptation of thought and action to the demands of the natural and social world explain how learning and coming to know are possible. These insights are as relevant today as they were when the chapters were first written.

Physics John D. Cutnell, Kenneth W. Johnson, 2009-09-08 Designed for medical professionals who may struggle with making the leap to conceptual understanding and applying physics, the eighth edition continues to build transferable problem-solving skills. It includes a set of features such as Analyzing-Multiple-Concept Problems, Check Your Understanding, Concepts & Calculations, and Concepts at a Glance. This helps the reader to first identify the physics concepts, then associate the appropriate mathematical equations, and finally to work out an algebraic solution.

Instructional Effectiveness of Video Media C. Douglas Wetzels, Paul H. Radtke, Hervey W. Stern, 1994 Visual forms of instruction are increasingly used as a result of the broader availability of technologies such as broadcasts, teleconferencing, videotapes, videodiscs, and emerging multimedia combinations of computer and digital audio-video technologies. A considerable amount of research stretches back to early work with film, television, and static visual materials that can be of benefit in developing these new forms of instruction. It is important for new work to profit from this accumulated research on the effectiveness and practical benefits of instruction with video and film. Accordingly, a review of this literature will benefit researchers and developers of instruction that use existing and new video technologies. The widespread and growing use of video and video-based media in instruction is based on a perception of television and similar dynamic visual media as having unique and positive attributes. This comprehensive review of the research literature regarding the use and effectiveness of video-based media attempts to summarize the current state of knowledge in this important area. Focusing on empirical findings, the authors have attempted to pull together several threads of research into a single work including works in educational and cognitive psychology, and communication and media research. As such, this book examines the research literature regarding the use of dynamic video media in instruction, including: * general reviews of the effectiveness, acceptance, and costs of several forms of educational television; * teaching techniques used effectively with video media; *

the combining of visual and verbal information; * the effects of motion, animation, and interactivity; * the relationship between media perceptions and learning; * the effect of various video production techniques on learning; and * critical perspectives on learning from media.
