Four Battlegrounds Paul Scharre, 2023-02-28 An NPR 2023 Books We Love Pick One of the Next Big Idea Club's Must-Read Books An invaluable primer to arguably the most important driver of change for our future. —P. W. Singer, author of *Burn-In* An award-winning defense expert tells the story of today's great power rivalry—the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives—and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States, and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game-changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing power, talent, and institutions. Data is a vital resource like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power—control over chip supply chains grants leverage over rivals. Talent is about people: which country attracts the best researchers and most advanced technology companies? The fourth “battlefield” is maybe the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society, and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war-game simulations, developing combat tactics better than any human, tracking billions of people using biometrics, and subtly controlling information with secret algorithms. He visits China's “National Team” of leading AI companies to show the chilling synergy between China's government, private sector, and surveillance state. He interviews Pentagon leadership and tours U.S. Defense Department offices in Silicon Valley, revealing deep tensions between the military and tech giants who control data, chips, and talent. Yet he concludes that those tensions, inherent to our democratic system, create resilience and resistance to autocracy in the face of overwhelmingly powerful technology. Engaging and direct, *Four Battlegrounds* offers a vivid picture of how AI is transforming warfare, global security, and the future of human freedom—and what it will take for democracies to remain at the forefront of the world order.

ACT 5000 English Vocabulary According CEFR C1 C2 □□□□□□□□ DAVID YAO, The ACT is a standardized test used for college admissions in the United States. It is currently administered by ACT, a nonprofit organization of the same name.

The ACT test covers four academic skill areas: English, mathematics, reading, and scientific reasoning. It also offers an optional direct writing test. Wikipedia Based on our many years' experience in HSK and IGCSE Chinese teaching and course contents preparation, we find vocabulary level classification is so important. Students can use CEFR levels for self-assessment so that they can more clearly define what they need to work on, and work out what they would like to achieve in their target language. We give the Best English-English-Chinese explanations for better understanding. Many students call it LIFE SAVING STRAW for their exam. This book is suitable for students with different language background.

Mental Models across Languages Pawel Sickinger, 2018-12-15 This book presents a study that triangulates the meanings of expressions across English, German and Japanese via their perception-based conceptual representations. In an online experiment, native speakers of the three languages were asked to design visual representations of expressions referring to baldness phenomena. These sets of visualizations are used to determine conceptual overlap or distance between expressions in the three languages, resulting in lexical-conceptual 'maps' for MALE BALDNESS. The study is discussed against the background of an embodied, perceptual symbol-based understanding of linguistic meaning. A section of the book further applies this perspective to the issue of translation, developing a process model of translation based on the concept of cognitive equivalence. The book presents a novel approach to lexical semantics from a cognitive linguistic perspective, tested through a methodologically innovative experiment. It is a compelling read to scholars in cognitive semantics, contrastive semantics, embodied cognition and cognitive translation studies.
