Management and Regulation of Pension Schemes Nicholas Morris, 2018-03-19 Perhaps the greatest long-term challenge facing modern economies is how to pay for the living expenses and care costs of the elderly. Following policy decisions made in Australia in the 1990s, a substantial part of the pension requirements of the next cohort of retirees will be met from savings accumulated during working years. The effective management of these savings is crucial. If they are invested wisely, the assets available to fund pensions and care will grow; if not, available funds may turn out to be insufficient. Unfortunately, there is considerable evidence worldwide that the management of funds attracts rent-seeking behaviour by the financial services industry which erodes much of the potential return. Australia introduced compulsory superannuation contributions for its working population in 1991, leading to a proliferation of funded schemes that are largely run by the private sector. Complexity, and many degrees of separation between fund members and those who manage their funds, have emerged as serious problems. Combined with weak competitive pressures and governance systems, and insufficient legal and regulatory constraints, the result is a system that does not serve its members well. This book provides a detailed evaluation of the Australian experience, highlights the extent to which the financial services industry has extracted rents from Australian pensioners, and how and why this occurred. Based on original empirical research, and examination of industry reviews and relevant literature, the book demonstrates the numerous principal-agent, conflict of interest and rent extraction problems that have emerged in Australia. The book makes suggestions for how these problems can be addressed in Australia, and also provides lessons for other countries wishing to enact pension reform.

Handbook of Novel Psychoactive Substances Ornella Corazza, Andres Roman-Urrestarazu, 2018-10-10 Handbook of Novel Psychoactive Substances (NPS) provides a comprehensive overview of the challenges that clinicians face when dealing with NPS and discusses how the profile of patients and their socio-demographic characteristics frame the serious public health concern that NPS pose. It presents various clinical cases, as well as detailed accounts of symptoms, psychopathology, toxicity, and overall clinical management that NPS require. This handbook brings together a unique collection of chapters written by leading experts in the field, who have felt the need to share their knowledge and experience to improve the clinical practice on NPS and the wellbeing of their patients.

The Great Convergence and the World System Reconfiguration Robert Dygas, 2025-08-25 For decades, the global

balance of power has been shaped by a handful of dominant nations, primarily the United States and Western Europe. Yet, the rise of emerging powers like China, India, Brazil, and Russia is transforming the foundations of the world order. These nations are challenging the traditional dominance of the West, promoting a multipolar world, and reshaping international norms, trade networks, and geopolitical alliances. This book explores the profound implications of this shift from a geoeconomic perspective, and the change of the geoeconomic paradigm, focusing on how these emerging powers influence global governance, economic policies, and security dynamics. It examines pivotal initiatives like China's Belt and Road Initiative, India's expanding global partnerships, and the role of BRICS in creating alternative financial systems to rival Western-dominated institutions such as the IMF and World Bank. By analyzing the complex interplay of cooperation, competition, and confrontation between established and rising powers, the book sheds light on critical questions: How are emerging powers shaping the new geoeconomic paradigm? Can the Global South achieve lasting economic independence? What strategies can prevent escalating international conflicts? How will digital mobility evolve in a changing global economy? Combining a deep analysis of foreign policies, hard and soft power strategies, and regional responses, this book provides readers with a nuanced understanding of how both traditional and emerging powers are forging new global and regional orders. With its timely insights, this book is an essential resource for academics, policymakers, researchers, and anyone aiming to grasp the future of international relations in an era of transformation.

The Reconnected Heart Dr. Jonathan Andrews MAPS FCCLP, 2020-12-03 Do you carry pain from a previous or existing relationship? Perhaps a friend, family member or partner has hurt you and you just can't seem to get over it. You try to move forward, but you have suffered injuries of connection and your heart isn't healing. Injuries of connection can be the deepest and most disruptive of all psychological conditions, leading to deep feelings of betrayal, worthlessness, shame and alienation. But there is hope. While it is true that relationships can hurt us, they can also heal us. Your heart can mend by connecting with yourself, connecting with safe and understanding people, and connecting with the God who created you and longs to love you in the midst of your pain. Using his 20 years of experience as a practising clinical psychologist, together with biblical foundations, insights from literature and scientific evidence, Dr Jonathan Andrews will lead you through the steps of healing. He will guide you through the chaos of psychological injuries caused by disconnection and towards a reconnected heart—and set you up for a life of trust, self-esteem, honour and belonging.

Lone Star Politics Ken Collier, Steven Galatas, Julie Harrelson-Stephens, 2020-12-03 In Texas, myth often clashes with the reality of everyday government. Explore the state's rich political tradition with Lone Star Politics as the author team explains who gets what and how. Utilizing a comparative approach, the authors set Texas in context with other states' constitutions, policymaking, electoral practices, and institutions as they delve into the evolution of its politics. Critical thinking questions and unvarnished Winners and Losers discussions guide students toward understanding Texas government and assessing the

state's political landscape. The highly anticipated Seventh Edition includes coverage of the state's response to the COVID pandemic, brand new chapter-level learning objectives, updated demographic and immigration statistics, and new Discussion Starter questions to help in-class discussion on critical policy debates. Farmers' Review ,1915

Unnaturally Delicious Jayson Lusk,2016-03-22 The food discussion in America can be quite pessimistic. With high obesity rates, diabetes, climate change, chemical use, water contamination, and farm animal abuse, it would seem that there wasn't very much room for a positive perspective. The fear that there just isn't enough food has expanded to new areas of concern about water availability, rising health care costs, and dying bees. In *Unnaturally Delicious*, Lusk makes room for optimism by writing the story of the changing food system, suggesting that technology and agriculture can work together in a healthy and innovative way to help solve the world's largest food issues and improve the farming system as we know it. This is the story of the innovators and innovations shaping the future of food. You'll meet an ex-farmer entrepreneur whose software is now being used all over the world to help farmers increase yields and reduce nutrient runoff and egg producers who've created new hen housing systems that improve animal welfare at an affordable price. There are scientists growing meat in the lab. Without the cow. College students are coaxing bacteria to signal food quality and fight obesity. Nutrient enhanced rice and sweet potatoes are aiming to solve malnutrition in the developing world. Geneticists are creating new wheat varieties that allow farmers sustainably grow more with less. And, we'll learn how to get fresh, tasty, 3D printed food at the touch of a button, perhaps even delivered to us by a robotic chef. Innovation is the American way. Thomas Jefferson, George Washington Carver, and John Harvey Kellogg were food and agricultural entrepreneurs. Their delicious innovations led to new healthy, tasty, convenient, and environmentally friendly food. The creations were unnaturally delicious. Unnatural because the foods and practices they fashioned were man-made solutions to natural and man-made problems. Now the world is filled with new challenges changing the way we think about food. Who are the scientists, entrepreneurs, and progressive

farmers who meet these challenges and search for solutions? Unnaturally Delicious has the answers.

Advances in Computers Marvin Zelkowitz, 2009-06-12 This is volume 72 of *Advances in Computers*, a series that began back in 1960 and is the oldest continuing series chronicling the ever-changing landscape of information technology. Each year three volumes are produced, which present approximately 20 chapters that describe the latest technology in the use of computers today. In this volume 72, we present the current status in the development of a new generation of high-performance computers. The computer today has become ubiquitous with millions of machines being sold (and discarded) annually. Powerful machines are produced for only a few hundred U.S. dollars, and one of the problems faced by vendors of these machines is that, due to the continuing adherence to Moore's law, where the speed of such machines doubles about every 18 months, we typically have more than enough computer power for our needs for word processing, surfing the web, or playing video games. However, the same cannot be said for applications that require large powerful machines. Applications such as weather and climate prediction, fluid flow for designing new airplanes or automobiles, or nuclear plasma flow require as much computer power as we can provide, and even that is not enough. Today's machines operate at the teraflop level (trillions of floating point operations per second) and this book describes research into the petaflop region (1,015 FLOPS). The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015.

History and Evolution of Aircraft Ahmed F. El-Sayed, 2024-07-31 *History and Evolution of Aircraft* reviews the history of aviation from early history to the present day, including the evolution milestones of military aircraft, civil aircraft, helicopters, drones, balloons, airships, and their engines. It also provides the background and development of different types of aircraft, including manned and unmanned vehicles, aircraft carriers, fixed or rotary wings, air, sea, and amphibian flight vehicles. Covering current and developing applications of unmanned aerial vehicles (UAVs), the book highlights the prospects of future flying vehicles including automotives and jetpacks. It follows the transition from piston to jet engines that include shaft-based engines (turboprop, turboshaft, and propfan), turbine-based engines (turbojet and turbofan), and athodyd engines (ramjet, turbo-ramjet, and scramjet). The book explores flight vehicles' technological advancements and evolution, including their geometrical features and performance parameters. It will also include nine appendices resembling databases for all types of aircraft. The book will be a useful reference for academic researchers and aviation, aerospace, and mechanical engineering students taking aerodynamics, aircraft structures, aircraft engines, and propulsion courses. Aviation history enthusiasts will be interested in the scope of the content as well. Instructors can utilize a Solutions Manual for their course.
