How to Write and Publish a Scientific Paper Barbara Gastel, Robert A. Day, 2022-06-30 Thoroughly updated throughout, this classic, practical text on how to write and publish a scientific paper takes its own advice to be as clear and simple as possible. The purpose of scientific writing, according to Barbara Gastel and Robert A. Day, is to communicate new scientific findings. Science is simply too important to be communicated in anything other than words of certain meaning. This clear, beautifully written, and often funny text is a must-have for anyone who needs to communicate scientific information, whether they're writing for a professor, other scientists, or the general public. The thoughtfully revised 9th edition retains the most important material—including preparing text and graphics, publishing papers and other types of writing, and plenty of information on writing style—while adding up-to-date advice on copyright, presenting online, identifying authors, creating visual abstracts, and writing in English as a non-native language. A set of valuable appendixes provide ready reference, including words and expressions to avoid, SI prefixes, a list of helpful websites, and a glossary. Students and working scientists will want to keep *How to Write and Publish a Scientific Paper* at their desks and refer to it at every stage of writing and publication.

Driving Science Information Discovery in the Digital Age Svetla Baykoucheva, 2021-09-30 New digital technologies have transformed how scientific information is created, disseminated—and discovered. The emergence of new forms of scientific publishing based on open science and open access have caused a major shift in scientific communication and a restructuring of the flow of information. Specialized indexing services and search engines are trying to get into information seekers' minds to understand what users are actually looking for when typing all these keywords or drawing chemical structures. Using artificial intelligence (AI), machine learning, and semantic indexing, these discovery agents are trying to anticipate users' information needs. In this highly competitive environment, authors should not sit and rely only on publishers, search engines, and indexing services to make their works visible. They need to communicate about their research and reach out to a larger audience. *Driving Science Information Discovery in the Digital Age* looks through the eyes of the main players in this game and examines the discovery of scientific information from three different, but intertwined, perspectives: - Discovering, managing, and using information (Information seeker perspective) - Publishing, disseminating, and making information discoverable (Publisher perspective) - Creating, spreading, and promoting information (Author perspective). - Presents an overview of the current scientific publishing landscape - Shows how users can search for scientific information more efficiently - Critically analyses the metrics used to measure the quality of journals and the impact of research - Looks at the discovery of scientific information from the perspectives of information seekers, publishers, and authors - Delves into the practices used by specialized indexing services and search engines to process scientific information and make it discoverable - Recommends strategies that authors could use to promote their research
