Upton Sinclair

The Chicago River Libby Hill, 2019-02-21 In this social and ecological account of the Chicago River, Libby Hill tells the story of how a sluggish waterway emptying into Lake Michigan became central to the creation of Chicago as a major metropolis and transportation hub. This widely acclaimed volume weaves the perspectives of science, engineering, commerce, politics, economics, and the natural world into a chronicle of the river from its earliest geologic history through its repeated adaptations to the city that grew up around it. While explaining the river's role in massive public works, such as drainage and straightening, designed to address the infrastructure needs of a growing population, Hill focuses on the synergy between the river and the people of greater Chicago, whether they be the tribal cultures that occupied the land after glacial retreat, the first European inhabitants, or more recent residents. In the first edition, Hill brought together years of original research and the contributions of dozens of experts to tell the Chicago River's story up until 2000. This revised edition features discussions of disinfection, Asian carp, green strategies, the evolution of the Chicago Riverwalk, and the river's rejuvenation. It also explores how earlier solutions to problems challenge today's engineers, architects, environmentalists, and public policy agencies as they address contemporary issues. Revealing the river to be a microcosm of the uneasy relationship between nature and civilization, *The Chicago River* offers the tools and knowledge for the city's residents to be champions on the river's behalf.

Riverfront Planning - Case Study of the 'Chicago River Corridor Development Plan' Felix Weickmann, 2007-05-10 Research Paper (postgraduate) from the year 2006 in the subject Geography / Earth Science - Demographics, Urban Management, Planning, grade: none, Humboldt-University of Berlin (Institute of Geography), language: English, abstract: In many urban regions, awareness of the specific challenges facing water-connected areas is increasing, and for the last forty years waterfront revitalization has been a hot topic worldwide. This has also been the case in the seven-million citizen region of Chicago. The factories and industries that once lined the Chicago River are now mostly gone (having closed or moved to greenfield sites). Nowadays a new mode of thinking is needed to decide how riverfront areas should best be redesigned and

redeveloped. Even in the last few years, awareness of the importance of enhancing the conditions along the Chicago River corridor and developing new valuable urban areas for residential and recreational utilization has grown. In 2005, Chicago's mayor labeled the river as "Chicago's second shoreline" and claimed that the river's banks are no longer "forgotten areas". Against this political background the following paper investigates the research question: How does the City of Chicago approach comprehensive planning for the Chicago River Corridor? To answer this question an analysis of the planning process and a plan assessment is done. The paper proceeds as follows. In the next section is an overview given of the history of the development and utilization of the Chicago River corridor. Sections 3 and 4 discussed the comprehensive plan making process as a basic planning tool and the specific content and features of the Development Plan, respectively. Section 5 presents a critical assessment of the river and riverfront planning approach of the City of Chicago. The paper concludes with suggestions of how planners can improve comprehensive waterfront plans and comprehensive plans in general as well as approach best plan making processes associated with urban riverfront development.

City Creatures Gavin Van Horn,Dave Aftandilian,2015-11-03 This anthology explores Chicago's surprisingly diverse wildlife through essays, poetry, paintings, and photographs. We usually think of cities as the domain of humans—but we are just one of thousands of species that call the urban landscape home. While Chicago residents are likely familiar with squirrels, pigeons, and dogs, many would be surprised to learn about the leafhoppers and water bears, black-crowned night herons and bison, beavers and massasauga rattlesnakes that are living alongside them. City Creatures introduces readers these and other creatures through a variety of creative contributions. Contributors bring a story-based approach to this urban safari, taking readers on birding expeditions to the Magic Hedge at Montrose Harbor on the North Side, canoe trips down the South Fork of the Chicago River (better known as Bubbly Creek), and insect-collecting forays or restoration work days in the suburban forest preserves. The book is organized into six sections, each highlighting one type of place in which people might encounter animals in the city and suburbs. For example, schoolyard chickens and warrior wasps populate "Backyard Diversity," and a chorus of deep-freeze frogs awaits in "Water Worlds." Its powerful combination of insightful narratives, numinous poetry, and full-color art will help readers see the city—and the creatures who share it with us—in an entirely new light.

Packing Them In Sylvia Hood Washington,2004-12-23 This important new book by Sylvia Washington adds a vital new dimension to our understanding of environmental history in the United States. Washington excavates and tells the stories of Chicago's poor, working class, and ethnic minority neighborhoods—such as Back of the Yards and Bronzeville—that suffered disproportionately negative environmental impacts and consequent pollution related health problems. She provides a new

frame for interpreting the social, political, and administrative initiatives of the early 20th century that influenced public health and urban revitalization movements in some of Chicago's most disenfranchised communities. This pioneering work will be essential reading not only for historians, but for urban planners, sociologists, citizen action groups and anyone interested in understanding the precursors to the contemporary environmental justice movement.

Environmental Hydraulics. Volume 1 Georgos C. Christodoulou,Anastasios I. Stamou,2022-03-07 Over the last two decades environmental hydraulics as an academic discipline has expanded considerably, caused by growing concerns over water environmental issues associated with pollution and water balance problems on regional and global scale. These issues require a thorough understanding of processes related to environmental flows and transport phenomena, and the development of new approaches for practical solutions. Environmental Hydraulics includes about 200 contributions from 35 countries presented at the 6th International Symposium on Environmental Hydraulics (Athens, Greece, 23-25 June 2010). They cover the state-of-the-art on a broad range of topics, including: fundamentals aspects of environmental fluid mechanics; environmental hydraulics problems of inland, coastal and ground waters; interfacial processes; computational, experimental and field measurement techniques; ecological aspects, and effects of global climate change. Environmental Hydraulics will be of interest to researchers, civil/environmental engineers, and professional engineers dealing with the design and operation of environmental hydraulic works such as wastewater treatment and disposal, river and marine constructions, and to academics and graduate students in related fields.

Fences and Biosecurity Annika Pohl Harrisson,Michael Eilenberg,2025-03-26 Fences and Biosecurity explores the role of fencing as a mechanism of control, exclusion, and power in the name of biosecurity. While biosecurity is broadly understood as the set of measures taken to prevent the introduction and spread of harmful organisms – thereby protecting humans, animals, and plants – this volume critically examines how fencing has become a key tool in these efforts. Through an interdisciplinary lens, the chapters reveal the ways in which fences, both physical and symbolic, shape social, political, and ecological landscapes. This volume brings together scholars from different regions to investigate the ways in which biosecurity fencing is deployed across different contexts in Europe and North America. As fencing practices increase in scope

and intensity, it becomes imperative to assess their effects – both intended and unintended – on human and non-human life. More than passive structures, fences actively participate in the governance of space, reinforcing borders, and regulating mobility. They embody biosecurity concerns, turning abstract discourses into tangible barriers that impact everyday life. Yet, fences are not merely practical tools; they also serve as powerful symbols of fear, control, and exclusion. While they may provide protection, they also create division, evoking a range of intellectual and emotional reactions and raising questions about their long-term implications. *Fences and Biosecurity* highlights how fencing, as a manifestation of biosecurity anxieties, is not only about managing biological threats but also about organizing the world into hierarchies of value. By delineating spatial boundaries, fences impose distinctions between what is considered safe and what is framed as dangerous or invasive. This separation of differently valued species and biological matter is not neutral; rather, it is deeply entangled with political imaginaries, economic interests, and global trade dynamics. Fences facilitate the circulation of capital while simultaneously restricting the movement of certain species and populations, making them instruments of governance rather than mere physical barriers. While fences physically separate spaces, they also reshape cultural understandings of risk, security, and belonging. By shifting the focus from biosecurity as an abstract policy concern to fencing as a material and discursive practice, this volume reveals the ways in which security measures are enacted on the ground.

City of Lake and Prairie Kathleen A. Brosnan,Ann Durkin Keating,William C. Barnett,2020-09-08 Known as the Windy City and the Hog Butcher to the World, Chicago has earned a more apt sobriquet—City of Lake and Prairie—with this compelling, innovative, and deeply researched environmental history. Sitting at the southwestern tip of Lake Michigan, one of the largest freshwater bodies in the world, and on the eastern edge of the tallgrass prairies that fill much of the North American interior, early residents in the land that Chicago now occupies enjoyed natural advantages, economic opportunities, and global connections over centuries, from the Native Americans who first inhabited the region to the urban dwellers who built a metropolis in the nineteenth and twentieth centuries. As one millennium ended and a new one began, these same features sparked a distinctive Midwestern environmentalism aimed at preserving local ecosystems. Drawing on its contributors' interdisciplinary talents, this volume reveals a rich but often troubled landscape shaped by communities of color, workers, and activists as well as complex human relations with industry, waterways, animals, and disease.
