Craig A. Mertler

International Action Research Sandra Hollingsworth, 1997 How people from educational settings worldwide conduct research together is the focus of this book. It examines the impact of action research on educational reform, and considers its influence on professions such as social work and nursing.

The SAGE Handbook of Educational Action Research Bridget Somekh, 2009-05-19 There has been a huge growth of interest in action research in educational settings over the past 20 years across the Americas, Europe, Australia and Africa - this Handbook provides a scholarly reference text that will inform the development of the field.

Action Research Craig A. Mertler, 2011-01-11 Written for pre-and in-service educators, this Third Edition of Craig A. Mertler's Action Research: Improving Schools and Empowering Educators introduces the process of conducting one's own classroom- or school-based action research in conjunction with everyday instructional practices and activities. The text provides educators with the knowledge and skills necessary to design research studies, conduct research, and communicate findings to relevant stakeholders and interested parties.

Action Research Craig A. Mertler, 2009 Action Research, Second Edition introduces practicing teachers to the process of conducting classroom-based action research. The book's practicality stems from its focus on research methods and procedures that teachers can use with their everyday instructional practices and classroom activities. Detailed, practical information is included for teachers as they design and conduct applied classroom-based research projects. Features and Benefits: Action Research Portraits (3 portraits in each chapter) These portraits show how teachers and other educators can actually conduct action research in order to address their own specific local-level problems. Lists of online resources (updated) The comprehensive lists are comprised of Web sites that readers can pursue for additional related information. Discussion of rigor in action research (new) This discussion communicates to the reader how to maintain the high

level of rigor and validity in action researchWriting Up Action ResearchSpecial sections, titled Writing Up Action Research, are included in Chapters 3 through 8. These sections provide annotated excerpts from published or otherwise disseminated action research reports, highlighting specific concepts presented in each particular chapter.

Action Research Communities Craig A. Mertler, 2017-09-01 Action Research Communities presents a new perspective on two current and proven educational practices: classroom-/school-based action research and professional learning communities. Implementation of one or the other of these practices often results in a variety of possible benefits for the teaching-learning process, for student achievement, and for overall school improvement. While these might seem to be separate, isolated practices, the author has taken the beneficial aspects of each practice and merged them into a cohesive and potentially powerful concept, coined action research communities. Each of the two concepts or approaches (action research and professional learning communities) is presented and discussed in detail. Because they both focus on local-level improvement of educational practice and share several overlapping features, the two concepts are then merged into a single entity—action research communities, or ARCs. These professional learning communities, with action research at their core, hold an immense amount of power and potential when it comes to enhanced professional growth and development for educators, increased student achievement, school improvement, and educator empowerment. ARCs essentially capitalize on all the individualized benefits and strengths of action research and of professional learning communities, and merge them into a single educational concept and practice. ARCs have the potential to help educators everywhere experience: • a common and collective focus and vision; • sustained collaborative inquiry; • individualized, customizable—and meaningful—professional growth; and • true empowerment that comes with this form of collaborative, inquiry-based, and reflective practice. Practical guidance for the development and implementation of ARCs is also provided, by focusing on ways in which professional educators (teachers, administrators, support staff, etc.) can implement, sustain, and extend the impact of their respective action research communities. Specific roles for district administrators, building administrators, and teachers are presented and discussed in depth, as are ways that ARCs can be used both to deepen professional learning for educators and to improve student learning.

Studying Your Own School Gary L. Anderson, Kathryn Herr, Ann Sigrid Nihlen, 2007-03-06 While there are many books out there on action research, few immerse the reader so effectively in the nitty-gritty realities of the method, while also pushing school practitioners to use inquiry to challenge an unacceptable status quo. This text should be read by all teachers and school leaders who care about empowering students and communities through action research. —Ruth Johnson, Professor of Educational Administration, California State University, Los Angeles Author, *Using Data to Close the Achievement Gap* A highly accessible and informative book for K-12 educators and university graduate students. Action Research in Teaching and Learning Lin Norton, 2009-05-07 A practical, down-to-earth guide for those who work in teaching and learning in universities, this book will be indispensable reading for those who would like to carry out action research on their own practice. Lin S Norton's concept of 'pedagogical action research' has come from over twenty years' experience of carrying out such research, and more than six years of encouraging colleagues to carry out small scale

studies at an institutional, national and international level. This accessible text illustrates what might be done to improve teaching/supporting learning by carrying out action research to address such questions such as: What can I do to enthuse my students? What can I do to help students become more analytical? How can I help students to link theory with their practice? What can I do to make my lecturing style more accessible? What is going wrong in my seminars when my students don't speak? Action Research for Teaching and Learning offers readers practical advice on how to research their own practice in a higher education context. It has been written specifically to take the reader through each stage of the action research process with the ultimate goal of producing a research study which is publishable. Cognisant of the sector's view on what is perceived to be 'mainstream research', the author has also written a substantial theoretical section which justifies the place of pedagogical action research in relation to reflective practice and the scholarship of teaching and learning.

Action Research: A Methodology For Change And Development Somekh, Bridget, 2005-12-01 This book presents a fresh view of action research as a methodology uniquely suited to researching the processes of innovation and change. Drawing on twenty-five years' experience of leading or facilitating action research projects, Bridget Somekh argues that action research can be a powerful systematic intervention, which goes beyond describing, analyzing and theorizing practices to reconstruct and transform those practices. The book examines action research into change in a range of educational settings, such as schools and classrooms, university departments, and a national evaluation of technology in schools. The opening chapter presents eight methodological principles and discusses key methodological issues. The focus then turns to action research in broader contexts such as 'southern' countries, health, business and management, and community

development. Each chapter thereafter takes a specific research project as its starting point and critically reviews its design, relationships, knowledge outcomes, political engagement and impact. Action Research is important reading for postgraduate students and practitioner researchers in education, health and management, as well as those in government agencies and charities who wish to research and evaluate change and development initiatives. It is also valuable for pre-service and in-service training of professionals such as teachers, nurses and managers.

He fully understands the uniqueness of teacher-centered research. . . . The language and the illustration cater to the classroom research contexts and it is easy to understand and apply." -Adel Al-Bataineh, Illinois State University "The book emphasizes the importance of reflection and creating an action plan. . . . Examples of action research papers are included. There are study sites, videos, slides and other supplemental materials available for the students to consult for ancillary learning. The writing style is clear, interesting and engaging. Throughout the text, Mills offers the reader a research scenario that helps to position him or her around the theme of the chapter and context of the research phase. This helps to alleviate some of the anxiety students of action research may experience as they begin each aspect of the action research process." -Beverly Melenzyer, California University of Pennsylvania "[T]he survey examples, SurveyMonkey, and direct observation examples are very good, as well as the informal interview, making records, [and] data collection techniques. . . .
