**Health Psychology** Gillian N. Penny,Paul Bennett,Mike Herbert,1994 The psychology of health is a rapidly expanding field within psychology. It draws upon a number of areas of psychology for its theoretical base but, whilst the contribution of social and cognitive psychology is widely acknowledged, that of lifespan psychology is perhaps less well recognised. However, a lifespan perspective has much to offer the health psychologist in the search for a more comprehensive understanding of health and illness. This book brings together European, American and Australian researchers whose interests in health psychology can be located within a lifespan context. The book explores the relevance of developmental and ageing processes to such issues as health and illness perception, illness prevention and health promotion, the experience of chronic illness, health and illness behaviour and the costs and consequences of illness. It does so by addressing specific health concerns within each of five stages in the life-cycle-childhood, adolescence, early adulthood, middle adulthood and old age. Thus, for example, the implications of emergent sexuality for health are addressed within the section on adolescence, psychological aspects of reproductive failure and the new technologies are considered within the section on early adulthood whilst issues of social support, social control and health are explored in the section on old age. Taken as a whole, the book offers the reader an interesting and informative illustration of the ways in which a lifespan perspective can enhance our understanding of health and illness.
