**Toolkit for Counseling Spanish-Speaking Clients** Lorraine T. Benuto, 2017-11-14 This timely practical reference addresses the lack of Spanish-language resources for mental health professionals to use with their Latino clients. Geared toward both English- and Spanish-speaking practitioners in a variety of settings, this volume is designed to minimize misunderstandings between the clinician and client, and with that the possibility of inaccurate diagnosis and/or ineffective treatment. Coverage for each topic features a discussion of cultural considerations, guidelines for evidence-based best practices, a review of available findings, a treatment plan, plus clinical tools and client handouts, homework sheets, worksheets, and other materials. Chapters span a wide range of disorders and problems over the life-course, and include reproducible resources for: Assessing for race-based trauma. Using behavioral activation and cognitive interventions to treat depression among Latinos. Treating aggression, substance use, abuse, and dependence among Latino Adults. Treating behavioral problems among Latino adolescents. Treating anxiety among Latino children. Working with Latino couples. Restoring legal competency with Latinos. The Toolkit for Counseling Spanish-Speaking Clients fills a glaring need in behavioral service delivery, offering health psychologists, social workers, clinical psychologists, neuropsychologists, and other helping professionals culturally-relevant support for working with this under served population. The materials included here are an important step toward dismantling barriers to mental health care.

*The Routledge Spanish Bilingual Dictionary of Psychology and Psychiatry* Steven Kaplan, 2011-02-01 The Routledge Spanish Bilingual Dictionary of Psychology and Psychiatry contains over 100,000 entries making this the most comprehensive and up-to-date dictionary of its kind. The Dictionary provides concise, comprehensive and current coverage of every word or phrase used in the study and practice of psychiatry and psychology. This valuable reference tool covers all disciplines and sub-disciplines, both research-based and clinical. This is a vital resource to those in the healthcare professions, to academicians and to those who work in translation and/or interpretation, healthcare and the law who are in contact with the English and Spanish speaking communities.

Using Information and Communication Technologies (ICT) for Mental Health Prevention and Treatment Ana Fonseca, Jorge Osma, 2021-03-30 The use of Information and Communication Technologies (ICT) to deliver psychological services has been emerging as an effective way of increasing individual access to mental health promotion, prevention, and

treatment. This Special Issue brings together different contributions focusing on the acceptability and feasibility, (cost-)effectiveness, potentialities, and limitations of ICT-based psychological services for mental health promotion, prevention, and treatment. In each paper, the implications for the implementation of ICT tools in different settings (e.g., primary care services) and for future research are discussed.

*Systematic Approaches to Mental Health Care and Promotion* Bach Tran, Roger C. Ho, Brian James Hall, 2020-06-05

Globally, mental health problems remain as one of the largest contributors to the population burden of diseases. According to WHO, common mental disorders, including depression and anxiety, affect the health of about 9% of the world's population and account for over 10% of the total years lived with disability. In many parts of the world, the number of people with mental health disorders has been increasing, fueled by a rapid population growth and aging, as well as urbanization and immigration. It is estimated that 80% of these non-fatal diseases occurred in low and middle income countries. However, in such settings, coverage of both preventive and curative services is still very limited. Diversity in socio-cultural backgrounds and limited capacity of local health care systems are emphasizing the importance of systematic approaches to understanding and intervening in the issue. Although the social, economic and health burden of mental health issues are substantial, effectiveness of policies and interventions is varied across regions and largely driven by contextual factors. Evidence-based prevention and treatment approaches involve the synthesis of epidemiological surveys, assessment of clinical populations (e.g. chronic medical diseases, chronic psychiatric illnesses) and studies exploring the role of biological markers in psychiatric illnesses. This Research Topic aims to introduce the latest research findings on the application of system-thinking in Mental Health Care and Promotion

**Minority and Cross-Cultural Aspects of Neuropsychological Assessment** F. Richard Ferraro, 2015-07-16

Minority and cross-cultural psychology is more relevant now than ever in our diverse world. Given the dramatic local and global changes occurring daily with regard to demographics, population changes, and immigration issues, minority and cross-cultural psychology is fast becoming a respected and critical area of scientific study. Pair that with the fact that people of all cultures and racial groups are living longer and experiencing age-related diseases and disorders, one can easily see the need for additional work on issues related to neuropsychological assessment. This new edition brings to the forefront recent developments by seasoned experts in the field. They offer up their newest projects in minority and cross-cultural aspects of neuropsychological assessment and are joined by new, up-and-coming professionals across a wide array of disciplines including psychology, medicine, and neuropsychology. Like the first edition, this updated collection sheds light on the ever-growing need for adequate neuropsychological assessment to a wider subset of individuals, crossing many cultural and minority barriers in the process. Continuously pushing the boundaries of neuropsychological assessment, this collection is essential reading for cognitive and clinical psychologists, and neuropsychologists, and a model text for advanced courses

dealing with minority and cross-cultural issues.

**Mental Health Care for People of Diverse Backgrounds** Julia D. Buckner, Yezzennya Castro, Norman Ellis, 2018-04-19  
Mental health care needs vary in different groups of people, but many healthcare professionals have a poor understanding of exactly how. From ethnicity to sexuality, family to religion, *Mental Health Care for People of Diverse Backgrounds* is a unique examination of how cultures can, and should, influence psychological services. It presents both theoretical and practical information regarding assessment, diagnosis and treatment. Concentrating on empirically based treatments, the book fuses clinical experience and research to give a wide-ranging overview. It also features many illuminating case studies. It is an invaluable reference for all mental healthcare professionals including psychologists, psychiatrists, doctors, social workers, nurses and counsellors, as well as students and academics with an interest in mental healthcare. The information contained in these chapters is intended for individuals with many levels of clinical training and is therefore appropriate for trainees in psychology and psychiatry, as well as experienced mental health providers. The chapters in this book contain information relevant to assessment, diagnosis, and treatment of individuals from diverse populations. - Julia D Buckner, Yezzennya Castro, Jill M Holm-Denoma and Thomas E Joiner Jr.

*Guide to Psychological Assessment with Hispanics* Lorraine T. Benuto, 2012-09-19 This book focuses on diversity, culture, and ethnicity as they relate to psychological assessment of Hispanics. It is a how-to guide for clinicians, researchers, and instructors working with Hispanic clients. Each chapter contains an overview of cultural considerations needed for assessing the Hispanic client followed by a specific exploration of the assessment measures available and the research that has been conducted on these measures with Hispanic participants. An exploration of the strengths and limitations of each assessment measure is included. Considering that ethnocultural minority individuals who are of Hispanic/Latino origin make up the largest ethnocultural minority group in the United States, guidelines for working with this population are a must. Given that a large subset of this percentage is composed of immigrants many of whom do not speak English or who have learned English as a second language, special considerations for effective psychological assessment are necessary. This book fills a gap in the scientific literature by consolidating the research on psychological assessment with Hispanic samples into one comprehensive volume and providing simple recommendations for the psychological assessment of Hispanic clients. An exploration of the general psychological assessment domains (e.g., personality, intelligence) is included with references to research on the major assessment measures used in the field. A more specific exploration of psychodiagnostic assessment measures follows, including the assessment of mood disorders, anxiety disorders, sexual dysfunction, psychosis, etc. Several chapters are dedicated to specialized assessment, including neuropsychological assessment, forensic assessment, and school-based assessment, overall creating the most comprehensive, up-to-date, research-based compendium of psychological assessment measures for use with Hispanic clients.

Neuropsychological Management of Mild Traumatic Brain Injury Sarah A. Raskin, Catherine A. Mateer, 2000 Despite the importance of the problem, strikingly little has been written about effective approaches to the treatment of individuals with mild to moderate brain injury. This book is designed for neuropsychologists, counseling and rehabilitation psychologists, and other rehabilitation professionals who work with individuals who have sustained brain injuries of mild to moderate severity. It provides a context for understanding and evaluating the common consequences of such injuries and offers both theoretical perspectives and practical suggestions for helping individuals to adjust to and compensate for residual difficulties. Early chapters focus on different domains of cognitive functioning, while later chapters describe clinical approaches to helping clients manage common emotional reactions such as depression, irritability, and anxiety. While the book acknowledges and discusses the controversy about the origins of persistent symptoms following mild brain injuries, it does not focus on the controversy. Rather, it adopts a what works approach to dealing with individuals who have persistent symptoms and perceptions that contribute to disability and to emotional distress. Many of these individuals benefit significantly from neuropsychological intervention. Case examples throughout the book illustrate the adaptation of cognitive, cognitive-behavioral, and traditional psychotherapeutic approaches to individuals with mild to moderate brain injury. Self-regulation and self-management of both cognitive failures and emotional responses are described as appropriate and effective in this population.

**Measuring Health** Ian McDowell, 2006-03-09 Worldwide economic constraints on health care systems have highlighted the importance of evidence-based medicine and evidence-based health policy. The resulting clinical trials and health services research studies require instruments to monitor the outcomes of care and the output of the health system. However, the over-abundance of competing measurement scales can make choosing a measure difficult at best. *Measuring Health* provides in-depth reviews of over 100 of the leading health measurement tools and serves as a guide for choosing among them. Now in its third edition, this book provides a critical overview of the field of health measurement, with a technical introduction and discussion of the history and future directions for the field. This latest edition updates the information on each of the measures previously reviewed, and includes a complete new chapter on anxiety measurement to accompany the one on depression. It has also added new instruments to those previously reviewed in each of the chapters in the book. Chapters cover measurements of physical disability, social health, psychological well-being, anxiety, depression, mental status testing, pain, general health status and quality of life. Each chapter presents a tabular comparison of the quality of the instruments reviewed, followed by a detailed description of each method, covering its purpose and conceptual basis, its reliability and

validity and, where possible, shows a copy of the actual scale. To ensure accuracy of the information, each review has been approved by the original author of each instrument or by an acknowledged expert.
