Monitorización en Anestesia, Cuidados Críticos y Medicina de Urgencias Borja de la Quintana,2004 Esta obra trata de la monitorización en el paciente anestesiológico, paciente crítico y paciente de urgencias. La monitorización de los diferentes parámetros vitales resulta una herramienta de la máxima trascendencia en el control del paciente quirúrgico, críticamente enfermo o con una patología urgente grave. Las técnicas disponibles se actualizan y perfeccionan a gran velocidad, a la vez que surgen técnicas nuevas, por lo que es necesario tener un profundo conocimiento de la función que cumplen, sus posibilidades, limitaciones o posibles errores y/o desviaciones de las mismas. Se trata de un tema de una trascendencia cada vez mayor en Medicina, dado que un mal conocimiento de estos aspectos puede conducir a un error diagnóstico por mala interpretación de los resultados o a no saber valorar la situación clínica correctamente por pérdida de información del observador al no saber interpretar los datos, lo que con pacientes de gravedad puede conducir a consecuencias muy negativas. En esta obra se hace un recorrido exhaustivo por las distintas técnicas de monitorización, analizando en cada una de ellas sus fundamentos físicos, técnica de muestreo y materiales necesarios, limitaciones técnicas y fuentes de error, solución de problemas, complicaciones de la técnica e indicaciones de la misma. En definitiva, la primera obra escrita en español sobre este tema y el texto más completo del mercado sobre el mismo, ya que trata temas escasamente tratados en otras obras.
