**Chemistry (Teacher Guide)** Dr. Dennis Englin, 2018-02-26 This book was created to help teachers as they instruct students through the Master's Class Chemistry course by Master Books. The teacher is one who guides students through the subject matter, helps each student stay on schedule and be organized, and is their source of accountability along the way. With that in mind, this guide provides additional help through the laboratory exercises, as well as lessons, quizzes, and examinations that are provided along with the answers. The lessons in this study emphasize working through procedures and problem solving by learning patterns. The vocabulary is kept at the essential level. Practice exercises are given with their answers so that the patterns can be used in problem solving. These lessons and laboratory exercises are the result of over 30 years of teaching home school high school students and then working with them as they proceed through college. Guided labs are provided to enhance instruction of weekly lessons. There are many principles and truths given to us in Scripture by the God that created the universe and all of the laws by which it functions. It is important to see the hand of God and His principles and wisdom as it plays out in chemistry. This course integrates what God has told us in the context of this study. Features: Each suggested weekly schedule has five easy-to-manage lessons that combine reading and worksheets. Worksheets, quizzes, and tests are perforated and three-hole punched — materials are easy to tear out, hand out, grade, and store. Adjust the schedule and materials needed to best work within your educational program. Space is given for assignments dates. There is flexibility in scheduling. Adapt the days to your school schedule. Workflow: Students will read the pages in their book and then complete each section of the teacher guide. They should be encouraged to complete as many of the activities and projects as possible as well. Tests are given at regular intervals with space to record each grade. About the Author: DR. DENNIS ENGLIN earned his bachelor's from Westmont College, his master of science from California State University, and his EdD from the University of Southern California. He enjoys teaching animal biology, vertebrate biology, wildlife biology, organismic biology, and astronomy at The Master's University. His professional memberships include the Creation Research Society, the American Fisheries Association, Southern California Academy of Sciences, Yellowstone Association, and Au Sable Institute of Environmental Studies.

**Removing the Educational Silos** Wiline Pangle, Keeley Stanley-Bohn, Ann Dasen, Jay Batzner, Heather Trommer-Beardslee, 2022-08-22 This collection was written by educators who are engaging in multi- and interdisciplinary education and are led by curiosities encompassing the collaborative nature of cognitive and kinesthetic engagement and awareness. The chapters are designed as sources for inspiration, replication, and adaptation. They are a place to start or continue. Each chapter, in varying modalities, addresses interdisciplinary course development and implementation in institutions of higher education. The common themes that emerge in the collection include navigating administrative systems and solving the challenges encountered when crossing departments or colleges, whether it be regarding listing of courses or the intricacies of course load on each professor. Many chapters also provide detailed information on the nuts and bolts of the specific course or courses taught, including syllabi, lesson examples, and both formal and informal assessments implemented. Multiple case studies are included in this collection, with many chapters providing specific examples of students' work. Contributors candidly offer discussions of failures and successes of their interdisciplinary collaborations, be it in course design, lesson planning or complications brought in by unforeseen pandemics. Most chapters end with a section entitled 'Lessons learned', where experiences from the field provide opportunities for growth and continued exploration. Readers can follow the book from cover to cover or dip in, finding the chapters that serve a particular project or teaching endeavour. The varying writing styles and topics are in direct relationship with the exact nature of the inspiration for this text. The over-arching themes of collaboration (diverse backgrounds, ideas, and skill sets, multidisciplinary, and interdisciplinarity) are the consistent touchstones that create a thematic self-guided journey of exploration through the book. The chapters offer readers guidance and encouragement to implement some of the approaches described, and inspiration to forge their own paths in the world of

multi- and interdisciplinary teaching and research. The depth and breadth of collaborative possibilities are exciting, and the editors' goal is to spark further experimentation. An excellent and practical resource for any educator hoping to teach his or her subject matter through an interdisciplinary approach and for all courses revolving around topics of pedagogy. The key audience will be graduate students, and teachers in all stages of education from primary to higher education.
