Handbook of Research on Race, Culture, and Student Achievement Keengwe, Jared, 2023-01-13 There is growing pressure on teachers and other educators to understand and adopt culturally relevant pedagogies as well as strategies to work with diverse groups of races, cultures, and languages that are represented in classrooms. Establishing sound cross-cultural pedagogy is also critical given that racial, cultural, and linguistic integration has the potential to increase academic success for all learners. The Handbook of Research on Race, Culture, and Student Achievement highlights cross-cultural perspectives, challenges, and opportunities of providing equitable educational opportunities for marginalized students and improving student achievement. Additionally, it examines how race and culture impact student achievement in an effort to promote cultural competence, equity, inclusion, and social justice in education. Covering topics such as identity, student achievement, and global education, this major reference work is ideal for researchers, scholars, academicians, librarians, policymakers, practitioners, educators, and students.

Educating Science Teachers for Sustainability Susan K. Stratton, Rita Hagevik, Allan Feldman, Mark Bloom, 2015-06-18 This volume contains a unique compilation of research and reflections representing multiple vantage points stemming from different parts of the world that can help science educators and teacher educators in finding ways to meaningfully and purposefully embed sustainability into teaching and learning. It is a rich resource for exploring and contextualizing sustainability-oriented science education. At this time we find ourselves in a situation in which the earth's ecological system is under significant strain as a result of human activity. In the developed world people are asking "How can we maintain our current standard of living?" while those in the developing world are asking "How can we increase the quality of our lives?" all while trying to do what is necessary to mitigate the environmental problems. This volume responds to these questions with a focus on educating for sustainability, including historical and philosophical analyses, and pedagogical and practical applications in the context of science teacher preparation. Included are many examples of ways to educate science teachers for sustainability from authors across the globe. This text argues that issues of sustainability are increasingly important to our natural world, built world, national and international economics and of course the political

world. The ideas presented in the book provide examples for original, effective and necessary changes for envisioning educating science teachers for sustainability that will inform policy makers.
