Measuring Innovation in the Mining Industry with Patents Giulia Valacchi ,Julio Raffo,Alica Daly,2019-05-09 Traditionally, the mining sector has been considered a slow innovator compared to other industries, like the manufacturing or pharmaceutical industries. However, we observe an upsurge in the innovation activity of the mining industry in the first half of the 2000s. During this period, mining innovation started to increase rapidly after periods of stagnation and downward trends. To conduct an in-depth investigation of the global trends and patterns behind this structural change in mining innovation, we formulated a general search strategy to identify patent activity in this sector. The strategy is repeatable over time and in multiple databases. It enabled us to produce a dataset of patents in mining and mining-related technologies. Using this newly-created database we identified at the basis of the structural change a switch away from refining technologies into exploration and environmental technologies probably explained by the took over of the so-called 4th Industrial Revolution. The types of actors active in the mining innovation also changed across time: there are now many more individuals, research centers and universities innovating in mining and relatively less companies. Finally, the country composition in the pool of mining innovation activity has radically changed with the appearance of China on the global scene starting from early 2000.

SME Mining Engineering Handbook, Third Edition Peter Darling,Society for Mining, Metallurgy, and Exploration (U.S.),2011 This third edition of the SME Mining Engineering Handbook reaffirms its international reputation as the handbook of choice for today's practicing mining engineer. It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals.Virtually all of the information is original content, representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term--why such changes are inevitable, what this will mean in terms of challenges, and how they could be managed Explaining the mechanics associated with the multifaceted world of mine and mineral economics, from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash-flow issues associated with

mine planning at a mature operation Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving optimization, or process dewatering methods Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking, whether employing a tunnel boring machine for development work, mineral extraction using a mobile miner, or cast blasting at a surface coal operation Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond, and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders

MINE mechanization and automation ,1993 Today, the mining industry is operating in a harsh economic climate. To survive, the industry must continuously refine and develop techniques and procedures related to mining operations. Mechanization and automation of mining operation is a very important means to cut costs, achieve higher productivity and improve the working environment in mines.

Mine Planning and Equipment Selection 1998 Raj K. Singhal,1998-01-01 This work details the findings of the 7th International Conference on Mine Planning and Equipment Selection of 1998, held in Calgary. Topics include: design and planning of surface and underground mines; geotechnical stability in surface and underground mines; and mining and the environment.

Human Systems Integration for Mining Automation Robin Burgess-Limerick,Tim Horberry,Danellie Lynas,Andrew Hill,Joel M Haight,2025-02-12 Human Systems Integration for Mining Automation is the professional's guide to understanding the issues, approaches, and pitfalls associated with mining automation from a human perspective. This book delves into a timely and fast-developing issue in mining and the wider minerals industry - the design and deployment of automation. The book approaches this from a "Human Systems Integration" standpoint in which the technical and human-related aspects are jointly considered as part of an integrated, automated mining system. This accessible and readable title offers a wider Human Systems Integration framework that can be applied to mining projects. It is based on an established framework that has been developed and used successfully in other work. The framework is backed up with information obtained from mines in Australia, the USA, Canada, Sweden, and Chile and original equipment manufacturers such as Caterpillar, Komatsu, Sandvik and Epiroc. Every reader of this book will recognise the essential benefits of human systems integration for mining automation. This book will be an ideal read for industry professionals including systems engineers,

safety engineers, mining engineers, human factors engineers, and engineers working on developing and deploying automation in mining and related industries including rail, road transport, and process control. It will also be of interest to students, researchers, and academics in related fields.

Occupational noise-induced hearing loss Katijah Khoza-Shangase,2023-03-01 Within the well-documented understanding of occupational noise-induced hearing loss (ONIHL) being a complex occupational health condition requiring the adoption of the complex interventions approach to management, challenges confronting hearing conservation programmes (HCPs) within the African context need clear characterisation and insightful deliberation. Guided by the systems theory, to be realistic about the implementation, monitoring, as well as evaluation of outcomes of HCPs within the African mining context, this book is a call for a paradigm shift in the assessment and management of ONIHL and HCPs in African mines. This book, *Occupational Noise Induced Hearing Loss: An African Perspective*, equips researchers involved in the management of ONIHL and implementation of HCPs with evidence that allows for contextually relevant best practices in mine settings, particularly those located in low-and-middle-income countries (LMICs). This best practice is multidisciplinary in nature and engages all stakeholders in all relevant sectors, with the goal of adopting a preventive audiology approach to ONIHL rather than the compensation-oriented approach that is currently prevailing. This book is a research-driven contribution to the occupational health and safety (OHS) space, with ONIHL as a focus case study, and it provides contemporary, contextually relevant, and responsive evidence related to ONIHL and HCPs in LMICs with a very specific focus on the South African context. This book expansively addresses all aspects of ONIHL and HCPs in one volume, with careful considerations of complexities and challenges to HCPs implementation, applicable specifically to LMICs, although useful globally. The book offers potential solutions and recommendations for all challenges identified, having carefully and deliberately engaged with local evidence, local context, and local policies and regulations to ensure an Afrocentric contribution to the world of evidence.

Automatisation de L'exploitation Minière II Canada Centre for Mineral and Energy Technology,Mining Research Laboratories (Canada),1986 In 1985 a proposal was made to establish an international research centre for innovative systems

of remote mining in the U.S. CANMET was requested to study the proposal and to prepare a Canadian response. To bring together representatives of the Canadian mining industry and get their views on the proposal, a workshop was held in March 1986, attended mainly by representatives of hardrock mining, with few operators of open pit mines and quarries, as well as other key sectors. In an attempt to establish the viewpoints of the missing sectors, a second workshop was held in October 1986, with similar results. This report contains all of the written submissions received in connection with the workshop, as well as brief summaries of the principal points made for non-written submissions. Views and opinions of the universities, manufacturers and consultants, the mining industry, government organizations, and other organizations and individuals are presented.
