Biology Peter J. Russell,Heather Addy,Kenneth Davey,Brock Fenton,Tom Haffie,Paul E. Hertz,2009-03-16 Biology: Exploring the Diversity of Life covers all the core concepts professors need their students to master before going on to upper level courses in a concise and accessible fashion. It also gives the historical precedent for all that we know now, as well as providing information on current research and modern molecular tools that have allowed us to ask and answer questions we never thought possible 10 years ago. The final piece of the puzzle and also the most unique feature is that, through the Unanswered Questions box, the text gives students a perspective on what researchers are working on for the future and what the impact will be to the world when these discoveries are made. Biology: Exploring the Diversity of Life goes beyond what normal Biology textbooks have done. Not only has it been designed with the Canadian student in mind but it has been built with the help of Canadian students. With new features such as Molecule Behind Biology, People Behind Biology and Life on the Edge, Canadian students will enjoy learning Biology and instructors will enjoy teaching it.

Biology Peter J. Russell,Shona Ellis,2018-02-14 Biology: Exploring the Diversity of Life is uniquely designed for today's Canadian biology student. The intention of this introductory biology text is to capture students' imaginations and evoke a sense of curiosity about the vast world of biology. To facilitate immediately immersing students in biology, the text puts the review of chemistry and biochemistry in a distinct section called the Purple Pages, to be easily referenced when needed. The authors have taken great care to encourage critical thinking and learning with engaging visuals and by integrating the material across the book's chapters. With a focus on the Canadian biology student, the text approaches the material with a readable style that instills a sense of wonder by using examples from across the spectrum of biodiversity, showcasing Canadian research and innovation, and highlighting an array of career options that stem from biology. The text engages students in the science and future of biological science with effective pedagogy, streamlined content, a comprehensive

MindTap, and a focus on research and experimentation that creates a complete biology learning solution.

A Look at Life Carol S. Crowder, Mary Durant, 1996-08-01 Our goal in writing this laboratory manual was to provide lab information and activities for a comprehensive study of biological diversity in a freshman biology course taken by both majors and non-majors. We have tried to include organisms that are interesting as well as those that show major anatomical, physiological, reproductive, behavioral and ecological features within all Kingdoms. Living specimens are included in several of the lab activities.--Preface.

Biodiversity D. J. Perlman, G. Adelson, 2009-07-01 Biodiversity has become a buzzword in the environmental movement and in science, and is increasingly being taught in university degree courses. This new text is designed as a primer, giving non-specialists an introduction to the historical context, current debates, and ongoing research in this subject.

The Diversity of Life Edward O. Wilson, 1992 View a collection of videos on Professor Wilson entitled *On the Relation of Science and the Humanities* In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon. There in the perfect bowl of the night sky, untouched by light from any human source, a thunderstorm sends its premonitory signal and begins a slow journey to the observer, who thinks: the world is about to change. Watching from the edge of the Brazilian rain forest, witness to the sort of violence nature visits upon its creatures, Edward O. Wilson reflects on the crucible of evolution, and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity. Wilson, internationally regarded as the dean of biodiversity studies, conducts us on a tour through time, traces the processes that create new species in bursts of adaptive radiation, and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years. The five enormous natural blows to the planet (such as meteorite strikes and climatic changes) required 10 to 100 million years of evolutionary repair. The sixth

great spasm of extinction on earth--caused this time entirely by humans--may be the one that breaks the crucible of life. Wilson identifies this crisis in countless ecosystems around the globe: coral reefs, grasslands, rain forests, and other natural habitats. Drawing on a variety of examples such as the decline of bird populations in the United States, the extinction of many species of freshwater fish in Africa and Asia, and the rapid disappearance of flora and fauna as the rain forests are cut down, he poignantly describes the death throes of the living world's diversity--projected to decline as much as 20 percent by the year 2020. All evidence marshaled here resonates through Wilson's tightly reasoned call for a spirit of stewardship over the world's biological wealth. He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth. Cutting through the tangle of environmental issues that often obscure the real concern, Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over; he convincingly drives home the point that both aims can, and must, be integrated. Unparalleled in its range and depth, Wilson's masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet's health.
