What to Expect Before You're Expecting Heidi Murkoff, 2009-05-15 Announcing the prequel. From Heidi Murkoff, author of America's bestselling pregnancy and parenting books, comes the must-have guide every expectant couple needs before they even conceive—the first step in *What to Expect: What to Expect Before You're Expecting*. An estimated 11 million couples in the U.S. are currently trying to conceive, and medical groups now recommend that all hopeful parents plan for baby-making at least three months before they begin trying. And who better to guide wanna-be moms and dads step-by-step through the preconception (and conception) process than Heidi Murkoff? It's all here. Everything couples need to know before sperm and egg meet up. Packed with the same kind of reassuring, empathetic, and practical information and advice and tips that readers have come to expect from *What to Expect*, only sooner. Which baby-friendly foods to order up (say yes to yams) and which fertility-busters to avoid (see you later, saturated fat); lifestyle adjustments that you'll want to make (cut back on cocktails and caffeine) and those you can probably skip (that switch to boxers). How to pinpoint ovulation, time lovemaking, keep on-demand sex sexy, and separate conception fact (it takes the average couple up to 12 months to make a baby) from myth (position matters). Plus, when to seek help and the latest on fertility treatments—from Clomid and IVF to surrogacy and more. Complete with a fill-in fertility journal to keep track of the babymaking adventure and special tips throughout for hopeful dads. Next step? *What to Expect When You're Expecting*, of course.

Biofouling Simone Dürr, Jeremy C. Thomason, 2009-12-21 *Biofouling* (the colonisation of an interface by a diverse array of

organisms) is almost always a problem where it occurs, as it negatively affects surfaces, the materials that they are made from and the structures that they form, and can even destroy them. This comprehensive book covers in detail in its first section the processes involved in marine , freshwater and medical biofouling including coverage of settlement by larvae and spores, biofouling community processes, epibiosis (biofouling on living organisms) and microbial fouling, including biofilms deleterious to human health. The book's second section, encompassing biofouling processes with industrial implications, includes coverage of biofouling on artificial substrata, paints and coatings technology for the control of marine biofouling, biofouling and antifouling in the maritime industries, such as shipping, offshore oil , and aquaculture, and in power stations and other industries. The impacts of both biofouling and biofouling control and details of current legislation of relevance to biofouling issues are fully covered. The book's final section looks at methods for the measurement of biofouling, and future prospects for biofouling, including in-depth coverage of the changes anticipated in biofouling worldwide due to global climate change, and likely future directions in antifouling research, technology and legislation. Biofouling, which includes contributions from many international experts, is an essential reference for all those working in the antifouling industry including those involved in formulation of antifouling products such as paints and other coatings. Aquatic biologists, ecologists, environmental scientists and lawyers, marine engineers, aquaculture personnel, chemists, and medical researchers will all find much of interest within this book. All universities and research establishments where these subjects are studied and taught should have copies of this important work on their shelves.
