

Biomedical Perspective Of Health

Joan Marlene Borst

Health Psychology Charles L. Sheridan, Sally A. Radmacher, 1992 Not only examines the present state of health psychology but also provides the reader with an exciting glimpse of its future. The differences between the biomedical and the biopsychosocial model are precisely illustrated and powerful evidence is given to demonstrate the urgent need for a change of models in order to cope with the psychological health changes of the 21st century. Without relinquishing the significance of experimental or theoretical work, it focuses on the practice of health psychology. Along with actual case studies, the summaries and discussion questions at the end of each chapter make the material both enjoyable and meaningful.

Sociology for Nurses Elaine Denny, Sarah Earle, 2005-06-20 Focuses on the relevance of sociology to contemporary nursing practice. Clearly written, and carefully illustrated, the book uses jargon-free explanations of sociological theories and evidence to show how studying sociology can be useful in all branches of professional nursing practice.

Health Promotion and Health Education in Nursing Ruth Cross, 2023-10-01 Health promotion is a core nursing topic and for the past decade, as a nurse, you will be spending more time and energy in the community, doing preventative work and helping to rebalance services away from hospitals. You are expected to 'Make Every Contact Count' and look for opportunities to encourage healthier behaviours and lifestyles each time you engage with an individual. The recent Coronavirus epidemic has brought public health and health promotion activities even more sharply into the spotlight and this has made a huge impact on the work you do. This book focuses on health education – this is the core health promotion work that you will do on a daily basis and it is ideal for those studying at Masters level. It takes an international approach, with Ruth Cross being extremely experienced with a proven track record in the health promotion community. This book includes: Explanations of the theory and context of health promotion and health education International content from people in the field including Norway, Australia and Ghana 'Tutorial Triggers', 'Points to Ponder' and 'Time to Reflect' features, encouraging you to apply the chapter content to your practice Real-life examples across the lifespan and in a range of different settings

Information Retrieval William R. Hersh, 2003 This book covers the theory and practical application of all aspects of health information retrieval systems. Information Retrieval: A Health and Biomedical Perspective, Second Edition, is an essential resource for healthcare administrators, medical informaticians, library information scientists, information technology

developers, and academicians in understanding technology and remaining on the cutting edge in today's progressive and ever-changing world of healthcare.

Managing for Healthy Ecosystems David J. Rapport, Bill L. Lasley, Dennis E. Rolston, N. Ole Nielsen, Calvin O. Qualset, Ardeshir B. Damania, 2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population. Based on a symposium on ecosystem health, *Managing for Healthy Ecosystems* identifies key issues that must be resolved if there is to be progress in this complex area, such as: Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments Issues and methods for assessing, monitoring, and managing diversity and its impact on human health in the context of climate change, agroecosystems, restoration of forests, politics, culture, and tradition. Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide. The more than 100 peer-reviewed papers are grouped into three major parts. The first, *Emerging Concepts*, explores the diverse meanings of ecosystem health within ecological, socio-economic, and human health perspectives, and the linkages to related concepts such as ecological integrity, sustainable development, and ecological footprints. The second part, *Issues and Methods*, introduces methods for assessing and monitoring ecosystem health, including strategies for gaining political and stakeholder input and support for science-based ecosystem management. The final part, *Case Studies*, reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems.

Medicine Over Mind Dena T. Smith, 2019-09-13 In an era in which the medicalization of mental health troubles and treatment has been settled for several decades, little is known about how this biomedical framework affects practitioners' experiences. This book explores how practitioners make sense of a field that has shifted rapidly in just a few decades.

Science Education Research and Practice in Europe Doris Jorde, Justin Dillon, 2012-12-17 Each volume in the 7-volume series *The World of Science Education* reviews research in a key region of the world. These regions include North America, South and Latin America, Asia, Australia and New Zealand, Europe, Arab States, and Sub-Saharan Africa. The focus of this Handbook is on science education in Europe. In producing this volume the editors have invited a range of authors to describe their research in the context of developments in the continent and further afield. In reading this book you are invited to consider the historical, social and political contexts that have driven developments in science education research over the years. A unique feature of science education in Europe is the impact of the European Union on research and development over many years. A growing number of multi-national projects have contributed to the establishment of a community of researchers increasingly accepting of methodological diversity. That is not to say that Europe is moving towards homogeneity, as this volume clearly shows.

Health Psychology Felicity Allen, 1998 This text offers an introduction to the relationship between behaviour and health. It outlines the distinction between physiological and psychological causes of ill-health and analyzes the key psychological theories used to explain health behaviour.

Youth Sociology Alan France, Julia Coffey, Steven Roberts, Catherine Waite, 2020-04-09 Falling somewhere between childhood and adulthood, 'Youth' is a key period of transition. It can be difficult to define and make sense of this period in one's life. However it is categorised, young people face a number of challenges and issues growing up in today's world. From the pressures created by social media to the increasing precarity of employment, the major social, cultural and economic developments of our time are each impacting this period of the lifecourse in myriad ways. Youth Sociology helps readers to understand how such changes factor into the experience of being young today, and illuminates the realities of the world in which young people live. Embedding perspectives and insights from a wide range of disciplines beyond sociology, this authoritative new textbook will be incredibly useful for all students of youth.

Information Retrieval: A Health and Biomedical Perspective William Hersh, 2008-12-19 This series is directed to healthcare professionals who are leading the transformation of health care by using information and knowledge to advance the quality of patient care. Launched in 1988 as *Computers in Health Care*, the series offers a broad range of titles: some are addressed to specific professions such as nursing, medicine, and health administration; others to special areas of practice such as trauma and radiology. Still other books in this series focus on interdisciplinary issues, such as the computer-based patient record, electronic health records, and networked healthcare systems. Renamed *Health Informatics* in 1998 to reflect the rapid evolution in the discipline now known as health informatics, the series continues to add titles that contribute to the evolution of the field. In this series, eminent experts, serving as editors or authors, offer their accounts of innovation in health informatics. Increasingly, these accounts go beyond hardware and software to address the role of information in influencing the transformation of healthcare delivery systems around the world. The series also increasingly focuses on "peopleware" and the organizational, behavioral, and societal changes that accompany the diffusion of information technology in health services environments.

Communication and Clinical Effectiveness in Rehabilitation Frances Reynolds (Ph. D.), 2005 Incorporating a patient-focused perspective on communication and health care, this new title for physical and occupational therapists and students provides practical strategies for effective communication with both colleagues and patients. Written in a straightforward, easy-to-understand style, it offers a multidisciplinary, evidence-based approach and an emphasis on reflective practice, making it a timely and useful resource for today's readers. Discusses strategies for communicating with both colleagues and patients Examines the evidence for the importance of effective communication in enhancing clinical effectiveness Contains reflective exercises for self-awareness of personal communication skills and difficulties Provides case studies that allow the

reader to analyze a range of realistic communication problems Includes research-based evidence throughout

Family Medicine John L. Buckingham,E.P. Donatelle,Thomas A. Jr. Johnson,Joseph E. Scherger,Robert B. Taylor,2013-11-21 New material in a new format is contained in this third edition of Family Medicine. The comprehensive text nevertheless remains true to the goal of previous editions in offering a scientific approach to health and illness within the context of the family. Using up-to-date clinical material, the book demonstrates how the family physician may provide comprehensive health care to persons of all ages. The first part of Family Medicine discusses such topics as the conceptual basis of family as discipline and specialty, problem differentiation, family-centered health care, longitudinal care, clinical reasoning, and resource management. The second part explores both problems related to organs and systems and problems related to the person, family and community, including: pregnancy, care of infants, children, adolescents, and the elderly; behavioral and psychiatric problems; emergency and critical care; sports medicine; alcoholism and substance misuse; environmental health; and neoplastic and infectious diseases. Family Medicine, with its greatly expanded in-depth coverage of the most commonly encountered clinical core problems and procedures in family medicine, continues to be a textbook written and edited by family physicians for family physicians.

Long-Term Conditions Liz Meerabeau,Kerri Wright,2011-05-09 This book is a very welcome tool, which will enable health professionals to understand the complexity, challenge and rewards of proactively managing long-term conditions. Putting this knowledge into skilled practice, in partnership with patients, will transform the lives of many individuals and their families, and thus fulfil the fundamental purpose of nursing. —From the Foreword by Professor Rosemary Cook CBE, Director, the Queen's Nursing Institute and Visiting Professor of Enterprise, University of Northumbria Long-Term Conditions is a comprehensive, practical guide for nurses and healthcare professionals on the care and management of people with chronic illness. It explores case management, individual care and management, the role of the 'expert patient', quality-of-life issues, counselling skills, self-management, and optimum self-care. Long-Term Conditions discusses the three main long-term conditions currently resulting in most hospital admissions: diabetes, respiratory, and coronary heart disease, with a focus on empowering the patient to self-manage. Key Features: A comprehensive guide to the care and management of long-term conditions Focuses on the management of the conditions from the patients' perspective Practical and accessible in style

The Biopsychosocial Model of Health and Disease Derek Bolton,Grant Gillett,2019-03-28 This open access book is a systematic update of the philosophical and scientific foundations of the biopsychosocial model of health, disease and healthcare. First proposed by George Engel 40 years ago, the Biopsychosocial Model is much cited in healthcare settings worldwide, but has been increasingly criticised for being vague, lacking in content, and in need of reworking in the light of recent developments. The book confronts the rapid changes to psychological science, neuroscience, healthcare, and philosophy that have occurred since the model was first proposed and addresses key issues such as the model's scientific

basis, clinical utility, and philosophical coherence. The authors conceptualise biology and the psychosocial as in the same ontological space, interlinked by systems of communication-based regulatory control which constitute a new kind of causation. These are distinguished from physical and chemical laws, most clearly because they can break down, thus providing the basis for difference between health and disease. This work offers an urgent update to the model's scientific and philosophical foundations, providing a new and coherent account of causal interactions between the biological, the psychological and social.

The Old Age Challenge to the Biomedical Model Charles F. Longino, 2020-11-25 Central to this book is the idea that the United States is in the midst of a health care crisis, one that will be exacerbated as the population continues to age. Longino and Murphy trace the philosophical and technological development of the biomedical model and show its inadequacy to deal with the massive chronic disease demand of the present and the future. They argue that the delivery of health care will meet and survive the old age challenge only if the medical system is thoroughly democratized. A more inclusive system must be devised that encourages a more reasonable allocation of resources, gives more attention to prevention, adopts a wider range of non-medical interventions, and invites citizens to become more involved in their own health care and the planning of services.

Health Psychology Linda Brannon, Jess Feist, 1992 This text covers a variety of subjects in the field of health psychology, such as stress, pain, coping, behavior and chronic disease, and preventing injuries and disease through behavioral modification. Each chapter begins with the basic questions the material will try to address and a case study that applies to these issues, and ends with summarized answers, a glossary, and suggested readings. Brannon and Feist, both of McNeese State University, address a number of controversial subjects, and encourage their readers to view the research critically. Scattered throughout the material are tips about how to check your health risks and how to become healthier, making this book both an academic text as well as a practical guide to health. Health and Healing in Comparative Perspective Elizabeth Dixon Whitaker, 2006 This reader provides both fascinating comparative ethnographic detail and a theoretical framework for organizing and interpreting information about health. While there are many health-related fields represented in this book, its core discipline is medical anthropology and its main focus is the comparative approach. Cross-cultural comparison gives anthropological analysis breadth while the evolutionary time scale gives it depth. These two features have always been fundamental to anthropology and continue to distinguish it among the social sciences. A third feature is the in-depth knowledge of culture produced by anthropological methods such as participant-observation, involving long-term presence in and research among a study population. The first

part of the book explores healing systems in different cultures; the second and third provide a strong grounding in evolutionary and culture-oriented analysis, making clear the connections between biology and culture as they affect health; the final part emphasizes case studies that apply the theoretical principles presented earlier to particular health topics. For medical anthropology, medical sociology, public health, nursing, and medical training professionals.
