**Concept Mapping as an Assessment Tool for Conceptual Understanding in Mathematics** Haiyue JIN, 2022-05-05 This book investigates the practicability and effectiveness of the concept map as a tool for assessing students' conceptual understanding in mathematics. The author first introduces concept mapping and then employs it to investigate students' conceptual understanding of four different mathematical topics. Alongside traditional scoring methods, she adopts Social Network Analysis, a new technique, to interpret student-constructed concept maps, which reveals fresh insights into the graphic features of the concept map and into how students connect mathematical concepts. By comparing two traditional school tests with the concept map, she examines its concurrent validity and discusses its strengths and drawbacks from the viewpoint of assessing conceptual understanding. With self-designed questionnaires, interviews, and open-ended writing tasks, she also investigates students and teachers' attitudes toward concept mapping and describes the implications these findings may have for concept mapping's use in school and for further research on the topic. Scholars and postgraduate students of mathematics education and teachers interested in concept mapping or assessing conceptual understanding in classroom settings will find this book an informative, inspiring, and overall valuable addition to their libraries.

**Psychology of Secondary Education** Charles Hubbard Judd,1927 The heart of this book is an analysis of the mental processes which pupils exhibit in studying particular high-school subjects, but new general material has been incorporated which aims to extend the discussion to all phases of secondary education. The book is new with the exception of some forty pages, which have been reproduced with minor revisions. Much new experimental material has been incorporated, especially with reference to reading. Emphasis has also been laid on the importance of social psychology as a basis for educational psychology. It has become increasingly clear in recent years that any productive theory of education as well as any satisfactory science of human nature will have to be based on a recognition of the fact that social institutions, such as language, number, science, customs, and laws, are far more significant than are individual modes of thought and behavior--
