Environmental History and Ecology of Moreton Bay Daryl McPhee,2017-08 The south-east Queensland region is currently experiencing the most rapid urbanisation in Australia. This growth in human population, industry and infrastructure puts pressure on the unique and diverse natural environment of Moreton Bay. Much loved by locals and holiday-goers, Moreton Bay is also an important biogeographic region because its coral reefs, seagrass beds, mangroves and saltmarshes provide a supportive environment for both tropical and temperate species. The bay supports a large number of species of global conservation significance, including marine turtles, dugongs, dolphins, whales and migratory shorebirds, which use the area for feeding or breeding. Environmental History and Ecology of Moreton Bay provides an interdisciplinary examination of Moreton Bay, increasing understanding of existing and emerging pressures on the region and how these may be mitigated and managed. With chapters on the bay's human uses by Aboriginal peoples and later settlers, its geology, water quality, marine habitats and animal communities, and commercial and recreational fisheries, this book will be of value to students in the marine sciences, environmental consultants, policy-makers and recreational fishers.

**The Gold Coast Transformed** Tor Hundloe,Bridgette McDougall,Craig Page,2015-03-23 The Gold Coast is one of Australia's premier tourism destinations, a city cut out of coastal vegetation, including paperbark swamps, mangroves and rainforests of worldwide significance. The Gold Coast Transformed is a collection of integrated chapters identifying and assessing the environmental impacts of the building of Australia's sixth largest city. From the time of the first timber-getters through to the present, the book traces the cumulative impacts of humans on the now World Heritage-listed rainforest and surrounding ecosystems. The city's natural and engineered environments are both fascinating and vulnerable. The construction of massive high-rise apartment blocks, on what were frontal beach dunes, is one of the fundamental mistakes not to be repeated. The book illustrates how and why major environmentally destructive development took place and discusses the impacts of such development on the Gold Coast's beaches, wildlife, and terrestrial and marine environments,

such as the destruction of riparian mangrove forest. The Gold Coast Transformed also shows the possibility of sustaining natural populations and reducing the city's ecological footprint. It will be of interest to ecologists, environmental scientists and managers, town planners, economists, policymakers and the general public.

*Negotiations in the Indigenous World* Ciaran O'Faircheallaigh, 2015-09-16 Negotiated agreements play a critical role in setting the conditions under which resource development occurs on Indigenous land. Our understanding of what determines the outcomes of negotiations between Indigenous peoples and commercial interests is very limited. With over two decades experience with Indigenous organisations and communities, Ciaran O'Faircheallaigh's book offers the first systematic analysis of agreement outcomes and the factors that shape them, based on evaluative criteria developed especially for this study; on an analysis of 45 negotiations between Aboriginal peoples and mining companies across all of Australia's major resource-producing regions; and on detailed case studies of four negotiations in Australia and Canada.

The World's Beaches Orrin H. Pilkey, William J. Neal, James Andrew Graham Cooper, Joseph T. Kelley, 2011-07-26 Take this book to the beach; it will open up a whole new world. Illustrated throughout with color photographs, maps, and graphics, it explores one of the planet's most dynamic environments—from tourist beaches to Arctic beaches strewn with ice chunks to steaming hot tropical shores. The World's Beaches tells how beaches work, explains why they vary so much, and shows how dramatic changes can occur on them in a matter of hours. It discusses tides, waves, and wind; the patterns of dunes, washover fans, and wrack lines; and the shape of berms, bars, shell lags, cusps, ripples, and blisters. What is the world's longest beach? Why do some beaches sing when you walk on them? Why do some have dark rings on their surface and tiny holes scattered far and wide? This fascinating, comprehensive guide also considers the future of beaches, and explains how extensively people have affected them—from coastal engineering to pollution, oil spills, and rising sea levels.

**The Littoral Zone**, 2007-01-01 In this, the first collection of ecocritical essays devoted to Australian contexts and their writers, Australian and US scholars explore the transliteration of land and sea through the works of Australian authors and through their own experiences. The littoral zone is the starting point in this fresh approach to reading literature organised around the natural environment—rainforest, desert, mountains, coast, islands, Antarctica. There's the beach, where sexual and spiritual crises occur; the Western Australian wheatbelt; deserts, camel trekking, and the transformation of a salt flat into an inland island; New Age literature that 'appropriates' Aboriginal culture as the healing poultice for an ailing West; a re-examination of pastoralism; an inquiry into whether Judith Wright's work can "persuade us to rejoice" in the world; the Limestone Plains, home of the bush capital and the bogong moth; tropical North Queensland; national parks where "the mountains meet the sea"; temperate islands, with their history of sealing, Soldier Settlement, and sea country pastoral; and

Antarctica, where a utopian vision gives way to an emphasis on its 'timeless' icescape as minimalist backdrop for human dramas. The author-terrain includes poets, playwrights, novelists, and non-fiction writers across the range of contexts constituting the littoral zone of 'Australia'.
