Social Facilitation Bernard Guerin, 1993-03-18 Humans may run faster, read less or type more quickly, simply because someone else is present. The presence of one person affects the behaviour of another: this is known as social facilitation and is one of the oldest topics in social psychology. Despite its importance this was the first book-length study of the phenomenon when it was published in 1993. Dr Guerin reviewed all work in the area from 1898 onwards, looking at both animal and human research, and developed his own theory, based on modern behaviour analysis. The book will be appreciated for its wide-ranging and balanced review of previous work on social facilitation and for the general review of the state of social psychology during the 1990s that Dr Guerin's work on the phenomenon includes. The author's theoretical stance is innovative and important, and will make the work required reading.

Motivation and Culture Donald Munro, John F. Schumaker, Stuart C. Carr, 2014-06-11 Although a growing number of researchers emphasize the social and psychocultural aspects of motivation and motivation theory, few books have provided much coverage beyond well-tread studies of physiological and biological factors and theories. Motivation and Culture brings together eighteen writers with a variety of academic backgrounds and cultural experiences to explore the way that culture impinges on motivation. Exploring topics such as personal values and motives, intercultural exchange in the workplace, the intrapsychic process and the nexus between biology and culture, they formulate theories of motivation that can be applied in the modern multicultural world. Contributors include: Dona Lee Davis, Russell Geen, Joan Miller, John Paul Scott, William Wedenoja, Elisa J. Sobo and Stephen Wilson.

A Psychology of Freedom and Dignity E. Rae Harcum, 1994-02-23 Harcum maintains that the proper assumptions about human nature are established by their relative utility in solving existing human problems. In order to facilitate solutions to familiar problems of daily living, the author advocates a definition of the science of psychology that includes the concepts of human freedom and intrinsic dignity. The author emphasizes the importance of the free will concept to behavioral scientists and practitioners as well as to citizens of the general population who, perhaps without realizing it, are forced users of behavioral science. The author's intention is to show that our cherished beliefs in the concepts of freedom and dignity are consistent with scientific principles and thus will become a vital part of a scientifically designed culture.
