Between Reform and Revolution David E. Barclay, Eric D. Weitz, 2002-09-01 The powerful impact of Socialism and Communism on modern German history is the theme which is explored by the contributors to this volume. Whereas previous investigations have tended to focus on political, intellectual and biographical aspects, this book captures, for the first time, the methodological and thematic diversity and richness of current work on the history of the German working class and the political movements that emerged from it. Based on original contributions from U.S., British, and German scholars, this collection address a wide range of themes and problems.

The Implementation of the EU Services Directive Ulrich Stelkens, Wolfgang Weiß, Michael Mirschberger, 2012-02-25 The Services Directive is one of the cornerstones for the realization of the EU internal market and is fundamental to economic and legal experts, as well as to the general public. This book analyses in detail the different steps taken by each of the 27 EU Member States in the implementation process of the Services Directive. It provides not only detailed information about the changes in national law adopted by the Member States, but also facilitates a comparison of the different implementation strategies. It gives an insight in the heterogeneity or homogeneity of implementation concepts and shows how European legislation affects legislation that were originally nationally dominated, such as the law of national administration. Valuable for academics interested in European and administrative law and the transposition of European lawmaking into domestic law, as well as for civil servants in ministries, chambers of commerce, local governments and other comparable institutions having to implement the Directive.

Small Molecules in Oncology Uwe M. Martens, 2018-08-01 This book, written by respected experts, discusses in detail the

latest developments in targeted oncology therapy using small molecules. It covers a wide range of small molecules, including tyrosine kinase inhibitors, mTOR, MEK, PARP, and multikinase inhibitors, as well as cell cycle and NTRK interacting agents. For each molecule, aspects such as the chemical structure, mechanism of action, drug targets, drug interactions, preclinical studies, clinical trials, treatment applications, and toxicity are discussed. Extensive research into the molecular mechanisms of cancer has heralded a new age of targeted therapy. The field of personalized cancer therapy is now growing rapidly, and the advances being made will mean significant changes in the treatment algorithms for cancer patients. Numerous novel targets that are crucial for the survival of cancer cells can be attacked by small molecules such as protein tyrosine kinase inhibitors. This book is the third edition of *Small Molecules in Oncology*, but has now been divided into two volumes, with the other volume focusing specifically on small molecules in hematology.
