Effects of Testing Variables on the Measured Compressive Strength of High-strength (90 MPa) Concrete Nicholas J. Carino, 1994

Prediction and Evaluation of Hardened Concrete Strength Yidong Xu, Jianghong Mao, Weijie Zhuge, Xiaoniu Yu, Ping Wu, 2025-08-30 This open access book monitors the development of the temperature field within concrete structures and, based on the Arrhenius equation, constructs F-P maturity equations applicable to different temperature ranges. It investigates the impact of hydration rate on the strength prediction method of the maturity equation. Furthermore, the book employs artificial neural network theory to improve the accuracy of early concrete strength predictions, optimizing the neural network model to develop a more precise and widely applicable prediction model. An intelligent program is developed using MATLAB, facilitating rapid strength prediction and assessment on construction sites using measured parameters.

The 8th FIRST (Forum in Research, Science and Technology) 2024 International Conference on Global Innovations is a prestigious gathering of thought leaders, industry experts, and visionaries who are dedicated to exploring and promoting innovative solutions to the world's most pressing challenges. This conference provides a unique platform for collaboration, knowledge sharing, and networking, fostering a global community of change-makers. This conference is held in conjunction with the forming of South Sumatra Vocational Higher Education or Technical and Vocational Education and Training (TVET) consortium. Technical and Vocational Education and Training (TVET) consortium is a forum for collaboration between vocational education units aimed at supporting the revitalization of Technical and Vocational Education and Training. This consortium is formed in order to achieve harmony through a synergistic partnership, the Directorate General of Vocational

Education, the Ministry of Education, Culture, Research and Technology (Kemendikbudristek) as well as stakeholders in the regions. In order to support the Partnership Ecosystem Strengthening Program for Regional Potential-Based Innovation Development.

Hydraulic and Civil Engineering Technology VI Mijia Yang, João C.G. Lanzinha, Xingxian Bao, 2021-11-15 New technologies, such as improved testing and physical modeling methods, together with numerical studies and other novel techniques, have led to many developments in the fields of hydraulic and civil engineering in recent years. This book presents proceedings from HCET 2021, the 6th International Technical Conference on Frontiers of Hydraulic and Civil Engineering Technology, held in Sanya, China, on 28 and 29 August 2021. The conference highlighted the latest advances, innovations and applications in the fields of hydraulic and civil engineering, and served as a platform to promote and celebrate interdisciplinary study. The book contains 89 papers, selected from 178 contributions and divided into 4 sections: Modern Civil Engineering; Water and Hydraulic Engineering; Environment Engineering and Sciences; and Transdisciplinary Engineering and Technology. Topics covered involve both theoretical and practical knowledge and understanding, primarily in the areas of hydraulics and water resource engineering, civil engineering, environmental engineering and sciences, transportation engineering, coastal and ocean engineering and transdisciplinary engineering and technology. The book, which presents a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among specialists in various fields, will be of interest to all academics, researchers, practitioners and policymakers seeking to understand and tackle civil and hydraulic engineering challenges by adopting appropriate, sustainable, solutions.

Fundamentals of High Strength High Performance Concrete Edward G. Nawy, 1996 The first book of its kind to provide, in one volume, a highly practical and concise guide to the subject. It starts by reviewing the fundamentals of cement technology and then proceeds to deal with applications in producing high strength high performance concretes using the various means and mineral admixtures to produce such concretes.

Constitutive Modelling of High Strength/high Performance Concrete fib Fédération internationale du béton,2008-01-01 High Strength/High Performance Concrete (HSC/HPC) continues to be the object of particular interest and extensive research, and its use in construction is increasing continuously. fib Bulletin 42 summarises the available information on the material behaviour of HSC/HPC, and develops a set of code-type constitutive relations as an extension of CEB-FIP Model Code 1990. Literature on experimental data and international guidelines, standards and recommendations were reviewed, and already-existing constitutive relations and models were evaluated. In addition to a number of material laws chosen and adjusted for this report, some new constitutive relations were developed based on the collected data. The criteria for the choice of the existing relations as well as the development of the new constitutive relations involved their simplicity and operationality (code-type mathematical formulations). Furthermore, they had to be physically sound and if possible describe the behaviour of both high-performance and normal strength concretes by a unique relation. Finally, compliance with the specifications given in the CEB-FIP Model Code 1990 was examined. This State-of-art report is intended for engineers and represents a summary of the relevant knowledge available to and possessed by the members of the Task Group at the time of its drafting.
