Martin Parker,David Bell

Limits to Growth Donella Meadows,Jorgen Randers,Dennis Meadows,2004-06-01 “A pioneering work of science.”—Business Insider “[This book] helped launch modern environmental computer modeling and began our current globally focused environmental debate . . . a scientifically rigorous and credible warning.”—The Nation In 1972, three scientists from MIT created a computer model that analyzed global resource consumption and production. Their results shocked the world and created stirring conversation about global ‘overshoot,’ or resource use beyond the carrying capacity of the planet. Now, preeminent environmental scientists Donella Meadows, Jorgen Randers, and Dennis Meadows have teamed up again to update and expand their original findings in *The Limits to Growth: The 30 Year Global Update*. Meadows, Randers, and Meadows are international environmental leaders recognized for their groundbreaking research into early signs of wear on the planet. Citing climate change as the most tangible example of our current overshoot, the scientists now provide us with an updated scenario and a plan to reduce our needs to meet the carrying capacity of the planet. Over the past three decades, population growth and global warming have forged on with a striking semblance to the scenarios laid out by the World3 computer model in the original *Limits to Growth*. While Meadows, Randers, and Meadows do not make a practice of predicting future environmental degradation, they offer an analysis of present and future trends in resource use, and assess a variety of possible outcomes. In many ways, the message contained in *Limits to Growth: The 30-Year Update* is a warning. Overshoot cannot be sustained without collapse. But, as the authors are careful to point out, there is reason to believe that humanity can still reverse some of its damage to Earth if it takes appropriate measures to reduce inefficiency and waste. Written in refreshingly accessible prose, *Limits to Growth: The 30-Year Update* is a long anticipated revival of some of the original voices in the growing chorus of sustainability. *Limits to Growth: The 30 Year Update* is a work of stunning intelligence that will expose for humanity the hazy but critical line between human growth and human development.

The Age of Sustainability Denis Pombriant,2018-11-07 While most people acknowledge the toll of burning fossil fuels on earth's climate, few consider what will happen when demand for carbon-based fuels inevitably outstrips supply. In *The*

Age of Sustainability Denis Pombriant evaluates and recommends solutions for energy provisioning and reducing carbon pollution that will keep the planet habitable and accommodating to human life. Far from being an unsolvable problem climate change and its solution should be seen as another in a long line of inflection points that have dotted human history. Cracking the problem is more like solving Rubic's Cube than playing whack-a-mole. As in all earlier eras, the next evolutionary step involves disruptive innovations beginning with new energy alternatives and treating carbon pollution as a chronic problem rather than as an emergency. By doubling the amount of photosynthesis planet-wide, we can stabilize climate and provision for the additional billions of people who will be born by mid-century. The Age of Sustainability shows that many the innovations needed to provide workable solutions are already available and that the free market is already adopting them. It also demonstrates how earlier generations have followed a common path to solving the big challenges of their times. This is a hopeful tour of solutions and, most importantly including economic models that will stabilize climate and provide a livable future for the human race.

The Governance of Urban Green Spaces in the EU Judith Schicklinski,2017-04-28 Across European cities the use of urban space is controversial and subject to diverging interests. On the one hand citizens are increasingly aware of the necessity for self-organising to reclaim green spaces. On the other hand local authorities have started to involve citizens in the governance of urban green spaces. While an increased level of citizen participation and conducive conditions for citizens' self-organisation are a desirable development per se, the risk of functionalising civil society actors by the local authority for neoliberal city development must be kept in mind. Drawing on qualitative and quantitative data collected in 29 European cities from all four European geographic regions, this book examines the governance of urban green spaces and urban food production, focusing on the contribution of citizen-driven activities. Over the course of the book, Schicklinski identifies best practice examples of successful collaboration between citizens and local government. The book concludes with policy recommendations with great practical value for local governance in European cities in times of the growth-turn. This book will be of great relevance to students, scholars, and policy-makers with an interest in environmental governance, urban geography, and sustainable development.

Wales' Central Organising Principle Anna Nicholl,John Osmond,2012 This publication explains why legislation to embed sustainable development as a 'central organising principle' of government needs to be more than a paper exercise.

Limits to growth the 30-year update ,2004 Combining a large amount of new data, more powerful computer modelling and the latest thinking on sustainability, ecological footprinting and limits, this updated edition of 'Limits to Growth' makes an even more urgent case for a rapid readjustment of the global economy toward a sustainable path.

What Next for Sustainable Development? James Meadowcroft,David Banister,Erling Holden,Oluf Langhelle,Kristin Linnerud,Geoffrey Gilpin,2019 This book examines the international experience with sustainable development since the concept was brought to world-wide attention in Our Common Future, the 1987 report of the World Commission on Environment and Development. Scholars from a variety of disciplinary backgrounds engage with three critical themes: negotiating environmental limits; equity, environment and development; and transitions and transformations. In light of the 2030 Sustainable Development Goals recently adopted by the United Nations General Assembly, they ask what lies ahead for sustainable development--Publisher's website.

Sixty Years of Science at UNESCO, 1945-2005 Unesco,2006 Written by historians and scientists from all over the world as well as by former and active staff members, this publication gives an inside perspective on the role played by UNESCO in the history of international scientific co-operation over the past six decades. It is divided into six sections under the headings of: setting the scene, 1945-1965; basic sciences and engineering; environmental sciences; science and society; overviews and analyses; and looking ahead. It also features a list of chronological milestones during this 60-year period.

Space Travel and Culture Martin Parker,David Bell,2009-06-08 Explores the significance of the first Apollo moon landing and how the countless books, films, and products associated with factual space fiction had an affect on popular culture and artistic practice, but not social sciences and humanities Investigates how a topic is hugely important in popular culture, but almost invisible in the academy, and how it makes us want to ask questions about visibility, or perhaps self-censorship Evaluates how little impact the space age actually had on the social sciences and humanities - partly because its combination of military-industrial cold war politics, combined with patriarchy and big science, sits uneasily with contemporary thought in these areas Provides an interdisciplinary collection of essays on various aspects of NASA, the moon landing, and the commercialization of space generally The book travels from hard engineering to space romance, echoing the variety of attempts to blur science and culture

Freedoms and Solidarities Judith R. Blau,Alberto Moncada,2007 Much has been written about growing global disparities in wealth and resources, how global capitalism has adversely affected human populations and the environment, and the dangers that a unipolar world order poses to peace and global pluralism. After summarizing the evidence for these arguments, the authors develop two main themes: first, that there is a growing transformative peoples' movement that challenges global capitalism and the imperial superpower; and, second, there is an extraordinary worldwide shift underway in human consciousness that accompanies practical global interdependencies and connectedness. The authors provide

evidence for an emerging foundation of what philosopher Peter Singer describes as a 'one-world ethic, ' and they show how this ethic is closely connected with what is called the 'human rights revolution.' They compare the western, liberal conception of freedom with conceptions of freedom found in the writings of Jean-Paul Sartre and Amartya Sen, and draw from Hannah Arendt's The Human Condition to clarify that freedom has both collective and individual dimensions. They build on these foundations to address the following topics: positive human rights, collective goods, cosmopolitanism, social and cultural pluralism, and they pose alternatives to capitalism and liberal democracy. The authors work in the tradition of critical social science, but go beyond that to encourage readers to engage in emancipatory projects and utopian thinking. The worlds' peoples face too many terrifying prospects not to engage such projects and thinking.

Energy Policy Noah B. Jacobs, 2009 Energy policy is the manner in which a given entity (often governmental) has decided to address issues of energy development including energy production, distribution and consumption. The attributes of energy policy may include legislation, international treaties, incentives to investment, guidelines for energy conservation, taxation and other public policy techniques. A national energy policy comprises a set of measures involving that country's laws, treaties and agency directives. This book presents the latest research on the economic effects, security aspects and environmental issues connected with energy policy.

The Politics of Climate Change Anthony Giddens, 2011-10-17 Since it first appeared, this book has achieved a classic status. It remains the only work that looks in detail at the political issues posed by global warming. This new edition has been thoroughly updated and provides a state-of-the-art discussion of the most testing issue humanity faces this century.

Advancing Sustainability in Higher Education Larry H. Litten, Dawn Geronimo Terkla, 2007-09-17 This volume details sustainability issues in institutional research (IR) and covers: the sustainability challenges we face as institutions, individuals, and the particular need for educational institutions to embrace and address these issues, and why IR needs to be involved in these efforts the perspectives of a corporate executive on the practical benefits of pursuing a sustainability program and the importance of data in doing so sustainability from a university perspective specific resources that IR can use in collecting data relevant to sustainable prosperity.
