Towards Sustainable Land Use Aligning Biodiversity, Climate and Food Policies OECD, 2020-03-11 Land use is central to many of the environmental and socio-economic issues facing society today. This report examines on-going challenges for aligning land-use policy with climate, biodiversity and food objectives, and the opportunities to enhance the sustainability of land-use systems.

Analysis of Energy Systems Vincenzo Bianco, 2017-05-12 The analysis of energy systems is of paramount importance in modern societies, since it is fundamental to guarantee a sustainable economic development. It combines technical and economic research with a specific focus on quantitative modelling, in order to optimize the modalities of energy demand and supply globally. The book covers major advanced topics related to the analysis of energy by considering different aspects, namely management, planning and policies. The most recent trends, such as smart grids, transition from fossil fuels to renewables based energy systems and distributed generation, are also discussed in this book. Intended to be a collection of various contributions from experts all around the world, it includes latest research results, innovations and methodologies about the analysis of energy systems. The book also focuses to contribute to the current debate related to the evolution of energy systems, by discussing in an open way the pro's and con's without any pre-constitute point of view. Title is aimed to be a reference for the academic community, students and professionals with a wider interdisciplinary background. Key

Features: Presents integration of renewable sources with conventional energy systems. Topic is addressed from a multidisciplinary point of view, i.e. economy, technical, modelling, planning. Investigates management and planning aspects of future energy supplies. Multidimensional nature of energy systems is highlighted and discussed. Contributes towards implementing policy measures to reduce primary energy consumptions and carbon footprint.

Responsible Trading in Raw Materials Solveig Gasche,2023-02-16 As environmental social governance (ESG) increasingly shapes the academic discourse in the European Union, Solveig Gasche provides a conceptual analysis of responsible trading in raw materials. Because the governance concept of responsible trading considers human rights and environmental standards, she defines the decisive determinants of trade in raw materials by considering the main historic, economic and regulative approaches. Illustrating and analysing the international and the German approach to implementing good guidance, strategies and governance, she further deals with the issues of conflict minerals and compliance, supply chain due diligence, corporate social responsibility, and business ethics. Corporate liability is given particular emphasis, taking into account options of contract design, transparency, and reporting as well as aspects of due diligence.

Personal Carbon Trading Yael Parag,Tina Fawcett,2017-07-28 Personal carbon trading is rapidly moving up the political agenda as recognition grows of its potential to address urgent issues of climate change and natural resource use. Under personal carbon trading schemes a carbon allowance would be allocated to each individual, to be used and traded in the same way as in national and international carbon trading schemes. This volume presents the latest research on personal carbon trading at different scales - from the effects on the individual, communities and organisations, to its place in national, EU (including the EU ETS) and global policy landscapes. It presents key research on the economic and policy barriers and implications, and will be essential reading for anyone involved in emissions trading research or policymaking.

*Hunger Hotspots* Food and Agriculture Organization of the United Nations,WFP, In the current edition of a regular joint bi-yearly report, the Food and Agriculture Organization of the United Nations (FAO) and the World Food Programme (WFP) warn that acute food insecurity is likely to worsen across 13 countries and territories identified as hotspots, during the outlook period from June to October 2025.The Sudan, Palestine, South Sudan, Haiti and Mali remain hotspots at the highest concern level, while Yemen, the Democratic Republic of the Congo, and Myanmar are classified as hotspots of very high concern. Other hotspots are Afghanistan, Burkina Faso, Chad, Somalia and the Syrian Arab Republic. Since the October 2024 edition, Afghanistan and the Democratic Republic of the Congo have been elevated to hotspot status. Conversely, regional clusters in East Africa (Ethiopia and Kenya) and Southern Africa (Lesotho, Malawi, Mozambique, Namibia, Zambia, and Zimbabwe), as well as Niger, are no longer classified as hotspots due to improvements in climatic conditions. Nigeria, and Lebanon are also no longer classified as hotspots due to some improvement in the economic situation and a reduction in the intensity of military operations, respectively. Although these countries are no longer considered hotspots for the outlook

period, future economic and conflict-related shocks, or climatic shifts, could lead to their reclassification. For the outlook period, funding for food and nutrition assistance falls critically short. Funding for humanitarian assistance must not be reduced. Instead, urgent assistance should be scaled up to protect livelihoods and improve food access across all hunger hotspots. This report outlines country-specific recommendations for urgent emergency responses, as well as anticipatory actions to meet existing humanitarian needs and implement short-term protective interventions before new crises emerge. The report focuses on the most severe and deteriorating acute hunger situations, but it does not represent all countries/territories experiencing high levels of acute food insecurity.

Linking Emissions Trading Schemes Andreas Tuerk, 2009 A growing number of GHG emissions trading schemes are being implemented at regional or national levels. However, even as the number of different schemes grows, few linkages exist between them. Major cap-and-trade proposals are currently at important stages in their development, especially in the United States, Japan and Australia, some of which explicitly emphasize the aim of linking with other schemes. One of the strategic goals of European climate policy is linking the EU ETS with other comparable schemes. The research presented in this volume is on actual economic, political and institutional constraints and implications. It examines the role of linking trading schemes for the development of the post-Kyoto climate architecture and for increasing linkage between schemes. This essential research will be relevant to both the scientific community and for policymakers who are involved in the design of emerging trading schemes and offset mechanisms, as well as in designing the post Kyoto climate regime. This volume focuses specifically on: o Economic, institutional/regulatory and legal dimensions of linking o Implications of linking on the design of emerging trading schemes o The role of linking trading schemes for the development of the post-Kyoto climate regime

*International Emission Trading* Richard Baron, International Energy Agency, Organisation for Economic Co-operation and Development, 2001 International emission trading will be one of the most important tools in the effort to reduce greenhouse gas emissions in the atmosphere. While the private sector has embraced the concept and is well equipped to use it, implementation at the international level remains incomplete. This book provides a broad assessment of the issue from the

'perfect' system envisaged in economic models to a more realistic view of how trading can actually work. The review is based on market experiments and modelling undertaken by the International Energy Agency and other institutions. It takes an in-depth look at implications for the power generation sector, and considers how developing countries could be included in a future trading regime. The aim of the book is to clarify what can be expected from international emission trading in the energy sector, and in other activities.

*Combating Climate Change* Lisa Svensson,2008 An increasing sense of urgency has pushed climate change to the top of the international agenda. This volume presents an overview of the principal mechanisms to combat climate change, and highlights the need for a broad approach to creating an international policy framework. Furthermore, it outlines current action in Europe and the U.S. and discusses and lessons to be learned from the experience of the European Union in order to advance a transatlantic consensus on climate change. Finally, it offers a roadmap for a post-2012 framework when the Kyoto Protocol expires. This volume is based on discussions and recommendations from a symposium of climate change experts, business leaders, and government officials at a November 2007 California-European Dialogue on Climate Change held in Santa Barbara, California. The report is a practical tool for public understanding of the ongoing debate about climate change.--BOOK JACKET.
