Handbook of Applied Behavior Analysis Interventions for Autism Justin B. Leaf, Joseph H. Cihon, Julia L. Ferguson, Mary Jane Weiss, 2022-05-06 This handbook addresses evidence-based practices in Applied Behavior Analysis (ABA) for individuals diagnosed with autism spectrum disorder (ASD). It provides an overview of the history of evidence-based practices and their importance as applied to the law, school settings, and factors that influence the use for treatment of ASD.

In addition, the book addresses cultural considerations as they relate to these treatments and examines procedural aspects of ABA interventions for autism. Key ABA treatments addressed include: Discrete trial teaching. Pivotal response training. Video modeling. Parent-mediated intervention. Early Start Denver Model, PEAK, PECS, and AAC. Script fading/activity schedules and differential reinforcement/extinction. Response interruption and redirection. Self-management and self-monitoring. Lifespan Treatment for Autistic Individuals Peter Sturmey, Professor of Special Education Russell Lang, Russell Lang, Director of Clinical Development and Research James K Luiselli, James K. Luiselli, 2025-07-21 In a world filled with hundreds of ASD treatments, it is crucial to distinguish between evidence-based practices and ineffective and potentially harmful pseudoscientific approaches. Interpreting ASD treatment research is complicated by differences in research norms across disciplines, competing theoretical underpinnings, and misleading information available from media sources. Overall, these issues contribute to a gap between the outcomes demonstrated in scientific studies and what is achieved in applied settings (e.g., schools, homes and clinics). Lifespan Treatment for Autistic Individuals guides professional practitioners in the selection of treatments that are procedurally and ethically best suited for their individual clients.

Handbook of Applied Behavior Analysis for Children with Autism Johnny L. Matson, 2023-06-07 The handbook examines the latest advancements in applied behavior analysis (ABA) as the preferred method of treatment for children diagnosed with autism spectrum disorder (ASD). It synthesizes the most current research data and trends with best-practice interventions to form a comprehensive, state-of-the-art resource. The handbook reviews ABA research and practices in depth and identifies the interventions most relevant to children across the autism spectrum. Key areas of coverage include: Foundations of applied behavior analysis. ABA treatments for disorders comorbid with autism spectrum disorder. Functional assessment for children with autism. Operational definitions as well as observing and recording data for children with autism. The relationship of measures of psychopathology and applied behavior analysis. Transitioning across tasks for children with autism, including toe walking, feeding problems, and self-help issues. Anxiety, depression, and ADHD in children with autism. The Handbook of Applied Behavior Analysis for Children with Autism is an essential reference for researchers, clinicians and graduate students as well as clinicians, therapists, and other practitioners across such interrelated disciplines as clinical child, school, and developmental psychology, child and adolescent psychiatry, social work, rehabilitation medicine/therapy, pediatrics, and special education.
