The Psychology of Suicide: From Research Understandings to Intervention and Treatment Yossi Levi-Belz, Yari Gvion, Alan Apter, 2019-07-11 Suicide is a highly complex and multifaceted phenomenon, with many contributing and facilitating factors and variables. However, given its being one of the most severe human behaviors, an obvious focus would be to identify the underlying psychological mechanisms and processes that may lead to suicidal ideation and behavior. This eBook is dedicated to studies exploring various approaches to the psychology of suicidal behavior as well as of non-suicidal self-injury (NSSI). The purpose of this eBook is to shed light on in-depth examinations of the current knowledge and empirical data regarding models, theories, and specific dimensions and variables that may help us increase the psychological understanding of suicidal phenomena. The specific goal is to identify particular psychological characteristics that may be used to develop prevention and intervention methods and programs. We believe that this eBook can contribute to the understanding of this behavior and help to develop specific tools, therapeutic guidelines, and programs that may help reduce the number of suicides occurring annually. This eBook is dedicated to our dearest friend, Dafni Assaf, who was one of the greatest leaders of the suicide prevention program in Israel.

From Organizational Welfare to Business Success: Higher Performance in Healthy Organizational Environments Gabriele Giorgi, Mindy Shoss, Annamaria Di Fabio, 2017-10-25 This e-book provides insight into the link between employee health and productivity/performance, with a focus on how individuals, groups, or organizations can intervene in this relationship to improve both well-being and performance-related outcomes. Given the continuous changes that organizations and employees face, such as the aging workforce and continued economic turbulence, it is not surprising that studies are increasingly finding that employee health is related to job conditions. The papers in this e-book emphasize that organizations make a critical difference when it comes to employees' health and well-being. In turn, healthy employees help their organizations to flourish. Such findings are in line with the recent emphasis by both the International Labour Organization (ILO) and the United Nations (UN) on the importance of work for individual well-being and the importance of individual well-being for productive and sustainable economic growth (see e.g., ILO, 1985; World Health Organisation, 2007; UN, 2015). Overall, the papers report findings from a cumulative sample of nearly 19,000 workers and perspectives from 68 authors. They suggest that performance cannot be successfully achieved at the cost of health and well-being, and provide

various perspectives and tools to guide future research and practice.

Development of the Adult Attachment Style Questionnaire Joanne M. Harste, 2000 The purpose of this study was to first propose dimensions of adult attachment and then to design a measure of adult attachment able to successfully assess these dimensions.--Page 4.

Does attachment style influence psychopathology? Correlation study of adult attachment styles as assessed by the Relationship Questionnaire and the Personality Assessment Inventory Beth A. Pilous-Smith, 2015

Romantic Attachment Styles, Gender, and Reasons for Living, 2003 The purpose of this study was to examine reasons for living in people with secure, avoidant, and anxious/ambivalent romantic attachment styles. Romantic attachment style was assessed by use of the Adult Attachment Questionnaire (AAQ). Reasons for living were assessed using the Reasons for Living Inventory (RFL). The independent variables were gender and romantic attachment style. The dependent variable was the RFL score. Participants included 235 male and female students from a southeastern university. A brief demographic questionnaire, the RFL (Linehan, et al., 1983), and the AAQ (Hazan & Shaver, 1987), were administered in electronic format on-line. A 3 (attachment style) X 2 (gender) Analysis of Variance with unequal cell sizes was used to test for main and interaction effects. The significance level was set at .05. Implications of findings and suggestions for future research were discussed.

The Effects of Attachment Style on Relationship Satisfaction Kelsey Larson, 2013 The present study investigated the three different attachment styles of secure, anxious-ambivalent, and avoidant and the propensity each style had toward an increase or decrease in relationship satisfaction. A sample of 271 participants between the ages of 18 and 64 completed the Adult Attachment Questionnaire (AAQ) and the Relationship Scales Questionnaire (RSQ) to examine attachment style, and the Relationship Assessment Scale (RAS) to determine relationship satisfaction. Results indicated that securely attached individuals were more inclined to experience higher relationship satisfaction and insecurely attached individuals were more inclined to experience lower relationship satisfaction.

Does Attachment Style Influence Intimacy Following High- and Low- Risk Interactions Jana Ilene Joseph, 2005 This study examined the relation between attachment characteristics and intimacy experienced after one's attachment style is activated. Attachment theory states that when an individual feels threatened by an attachment figure, attachment style is activated and dictates how that individual relates to his or her partner in that situation. This study tests this theory. Data were collected on 110 committed romantic couples from the community. Each individual completed a series of questionnaires, including the

Adult Attachment Questionnaire. Couples then engaged in a series of four videotaped interactions in which both partners had an opportunity to discuss times in which their feelings were hurt by someone other than their partner and times in which their feelings were hurt by their partner. These interactions were regarded as low- and high-risk, respectively. The high-risk interaction was specifically targeted to activate attachment style and elicit attachment behaviors. Analyses were conducted using the Actor-Partner Interdependence Model (APIM). This model takes into account the interdependence of observations between partners. As a function of this model, both actor effects (the effect one's own attachment style has on one's own experiences of intimacy) and partner effects (the effect one's own attachment style has on one's partner's experiences of intimacy) were examined. Intimacy was conceptualized in two different manners: state (post-interaction intimacy) and trait (overall intimacy in the relationship). It was hypothesized that individuals with insecure attachment characteristics would report lower feelings of both state and trait intimacy compared to securely attached individuals. It was also predicted that the partners of individuals with insecure attachment characteristics would report lower state and trait intimacy following the high-risk interaction compared to partners of secure individuals. The results of this study supported these hypotheses. Models testing the effect of the attachment characteristics avoidance, ambivalence, and avoidance-x-ambivalence found a relation between the presence of insecure attachment characteristics and lower levels of both state and trait intimacy. Implications of these results and future directions of study are discussed.

Attachment and Personality as Related to Relationship Satisfaction Marissa Elizabeth Miller, California State University, Sacramento, 2012 Correlations between personality traits, attachment style and romantic relationship satisfaction in a sample of 200 California State University, Sacramento undergraduate students enrolled in introductory psychology courses were examined. In addition, participants' sex, sex of partner, ethnicity, college level, college major, relationship status, length of relationship and cohabitation were examined. Participants were administered the Experience in Close Relationships-Revised Questionnaire, the Adult Attachment Scale, the NEO-Five Factor Inventory, four scales (Dominance, Self-Acceptance, Independence and Empathy) of the California Psychological Inventory, the Relationship Assessment Scale and the Perceived Relationship Quality Component Inventory. Differences in personality traits and attachment style were found based on participants' sex, ethnicity and sex of participants' partner. Differences in personality traits, attachment style, and relationship satisfaction were found in association with college level. v Differences in personality traits were found between college majors. Differences in attachment style were found based on relationship status.

Attachment Style as a Predictor of Experience with Art Materials Hope Boeve, 2016 The goal of this study is to investigate the relationship between attachment style in close relationships as measured by two self-reports (Relationship Questionnaire; Experience in Close Relationships-Revised), and how participants respond to two types of art materials: resistive (colored pencils) versus fluid (watercolor), as measured by the Art-Based Intervention questionnaire. Participants (N=36) were

randomly assigned to art conditions. It was expected that secure style participants would prefer resistive to fluid; anxious style participants would show no preference. Results yield different outcomes for each measure of attachment. Significant results showed that the more avoidant and anxious the attachment style, as measured by the Experiences in Close Relationships-Revised (ECR-R), the more the participant enjoyed the art process, regardless of the art material. The conflicting results from categorical and dimensional attachment measures, paired with the strong correlation of both ECR-R high anxiety and avoidance with positive experience making art, suggest that attachment styles may have significant bearing on each of the dynamics of art therapy, resulting in a multi-layered relational experience that is not easily predictable.
