City Logistics 1 Eiichi Taniguchi,Russell G. Thompson,2018-07-24 This volume of three books presents recent advances in modelling, planning and evaluating city logistics for sustainable and liveable cities based on the application of ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems). It highlights modelling the behaviour of stakeholders who are involved in city logistics as well as planning and managing policy measures of city logistics including cooperative freight transport systems in public-private partnerships. Case studies of implementing and evaluating city logistics measures in terms of economic, social and environmental benefits from major cities around the world are also given.

AI, Cybersecurity, and Next-Generation Mobility in Smart Cities Al-Zubaidie, Mishall H.,2025-11-26 The evolution of smart cities is driven by the intersection of artificial intelligence (AI), cybersecurity, and next-generation mobility. As urban environments become interconnected through sensors, autonomous vehicles, and digital infrastructure, AI plays a role in optimizing transportation systems, managing energy use, and enhancing urban life. There is a growing need for robust cybersecurity measures to safeguard critical systems from digital threats. These technologies shape a new era of intelligent, secure, and sustainable urban mobility, where data-driven innovation ensures efficiency, convenience, safety, and resilience

in future cities. AI, Cybersecurity, and Next-Generation Mobility in Smart Cities explores how AI and cybersecurity technologies transform next-generation mobility systems within smart cities. It examines the ways these innovations enhance transportation efficiency, safety, and sustainability while protecting urban networks from digital threats. This book covers topics such as sustainable development, vehicle emissions, and data privacy, and is a useful resource for engineers, urban and regional developers, academicians, researchers, and environmental scientists.

Urban Europe Virginie Mamadouh, Anne Wageningen, 2015-10-01 In Urban Europe, urban researchers and practitioners based in Amsterdam tell the story of the European city, sharing their knowledge of and insights into urban dynamics in short, thought-provoking pieces. Their essays were collected on the occasion of the adoption of the Pact of Amsterdam with an Urban Agenda for the European Union during the Dutch Presidency of the Council in 2016. The fifty essays gathered in this volume present perspectives from diverse academic disciplines in the humanities and the social sciences. The authors including the Mayor of Amsterdam, urban activists, civil servants and academic observers cover a wide range of topical issues, inviting and encouraging us to rethink citizenship, connectivity, innovation, sustainability and representation as well as the role of cities in administrative and political networks. With the Urban Agenda for the European Union, EU Member States have acknowledged the potential of cities to address the societal challenges of the 21st century. This is part of a larger, global trend. These are all good reasons to learn more about urban dynamics and to understand the challenges that cities have faced in the past and that they currently face. Often but not necessarily taking Amsterdam as an example, the essays in this volume will help you grasp the complexity of urban Europe and identify the challenges your own city is confronting.

Sustainability of Urban Freight Transport Henricus Joannes Quak, 2008 Although our urbanized civilization requires freight transport in order to sustain it, urban freight transport is especially recognized for its unsustainable impacts. To reduce the unsustainable impacts of urban freight transport, many local governments develop policies that focus sometimes more on banning or restricting urban transport than on making it more sustainable. In the first part of this thesis we develop a framework to structure the urban freight transport field and to review urban freight transport sustainability initiatives. The number of initiatives that is successfully implemented in practice turns out to be quite low. In the review and the following analysis, we try to find the barriers for successful implementation of the initiatives in practice. In the second part we examine the impacts of the most commonly used local sustainability policies. Six time-window scenarios and their impacts on the economical, environmental and social sustainability are examined based on a multiple case study. Time-window regulations increase both the environmental and distribution costs. Retail chains are affected differently by time-window pressure and vehicle restrictions due to differences in their logical concept. based on an experiment we examine the effects of retailers'

logical decisions in combination with local sustainability policies. Next, we examine the degree to which retailers are able to deal with problems caused by time-windows. Combining the primary and secondary distribution, i.e. factory gate pricing, results in more sustainable distribution operations for the retailer and in less sensitivity towards time-window regulations.
