*Physical, Physiological and Technical Development in Youth Athletes* Roberto Modena, Chiara Zoppirolli, Paolo Riccardo Brustio, 2025-09-16 The long-term development of athletes represents a complex puzzle that needs to be solved to allow athletes to get qualifications while allowing them to reach their highest potential level of performance in adulthood. The importance of structured and age-appropriate training cannot be underestimated, as it lays the foundation for further performance, lifelong healthy habits, and a strong work ethic. Structured and age-appropriate training allows for the right timing of physical, physiological, and technical improvements through the correct development of strength, endurance, and skill acquisition, also guaranteeing the consciousness of crucial values such as teamwork, perseverance, and goal-setting. Coaches and trainers in youth sports must strive to balance pushing young athletes to reach their full potential and ensuring that training remains enjoyable and fosters a love for the sport. Moreover, age-appropriate training programs consider the unique physiological and psychological characteristics of young athletes, promoting proper growth and minimising the risk of injuries.

*Sport Speed and Agility* John M. Cissik, Michael Barnes, 2004 Provides useful, practical information on how to improve speed and agility. In an easy-to-understand and apply manner, Sport Speed and Agility explains the science behind speed and agility training, including the technique behind running, the physiology behind speed and agility training, the role that motor learning and skill acquisition plays in agility training, and the theory behind program design. Offers sport-specific high school and collegiate speed and agility training programs for baseball/softball, basketball, football, ice hockey, rugby, and soccer. Also includes acceleration, maximum velocity, and agility drills with tips on how to make the drills more effective and more difficult.

**Rio, Tokyo Paralympic Games and beyond: How to Prepare Athletes with Motor Disabilities for Peaking** Pierre-Marie Leprêtre, Victoria L. Goosey-Tolfrey, Thomas W. J. Janssen, Claudio Perret, 2017-05-25 In 1960, the 9th Annual International Stoke Mandeville Games were supported, for the first time, by the Italian Olympic Committee. Taking place six days after the Closing Ceremony of the XVII Olympic Games, the paralympic games for disabled athletes were born. From Roma in 1960 to London in 2012, the Paralympic Games grew in terms of athletes' number from 400 to 4,237, and now brings together more than 164 nations (Perret, 2015). The word "Paralympic" derives from the Greek preposition "para"

(beside or alongside) and the word “Olympic”. Paralympics want to be the parallel Games to the Olympics and illustrate how the two movements exist side-by-side (Paralympics – History of the Movement, 2016). Now taking place after the Olympics Games, the Paralympic Games are the pinnacle of the career of athletes with physical impairments and have become the second largest sport event in the world (Perret, 2015; Paralympics – History of the Movement, 2016; Gold and Gold, 2011). The first statement of the vision of the International Paralympic Committee (IPC), i.e. “to create the conditions for athlete empowerment through self-determination” (Paralympics – History of the Movement, 2016; International Paralympic Committee, 2016), shows the importance of the place of the athlete with an impairment at the heart of the Paralympic Movement. The ultimate aim of the IPC is « to enable Paralympic athletes to achieve sporting excellence and inspire and excite the world. » (International Paralympic Committee, 2016). The performance level of athletes with an impairment improved to a point that, in the present days, sport news and world sport movements focus on the potential advantage of artificial limbs among athletes with amputations and their integration in able-bodied competitions (Burkett, 2010). However, they do not represent the totality of athletes with an impairment at the Paralympic Games. Athletes with other physical impairments (visual deficit, spinal cord injury, cerebral palsy or else) are eligible to compete. These impairments induce typical functional and physiological (e.g., cardiovascular, thermoregulatory) responses to exercise. For example, spinal cord injury (athletes with tetraplegia or paraplegia) causes thermoregulatory impairment (Goosey-Tolfrey et al., 2008) and individuals with cerebral palsy have also demonstrated higher thermal and metabolic strain than matched controls during treadmill walking in the heat (Maltais et al., 2004). Thus, hyperthermia among these athletes with an impairment alters their performance compared to their Olympic counterparts (Bhambhani, 2002). Mechanical performance analysis, the description of physiological responses according to the functional impairment or else the response to training and the relationship between laboratory and field testing responses are different parts of a package introduced here to address the aim of the IPC: to enable Paralympic athletes to achieve sporting excellence (Paralympics – History of the Movement, 2016; International Paralympic Committee, 2016). Paralympic Games, held almost immediately following the respective Olympics in the same site (Gold and Gold, 2011), also have exposed athletes to different environmental conditions. In the present 20-odd years, three of four Summer Paralympic Games have been or will be organized in the heat with or without significant humidity: Beijing 2008 (Average weather in September for Beijing, China., 2016), Rio de Janeiro 2016 (Average weather in September for Rio de Janeiro, Brazil., 2016) and Tokyo 2020 (Average weather in September for Ota, Japan., 2016). It has been established that the environmental conditions not only influences the level of cognitive and exercise performance capacity in trained able-bodied individuals (Veneroso et al., 2015), but their health status may also be affected. Due to the above-mentioned impairment in thermoregulatory capacity athletes with spinal cord injury or cerebral palsy may be more susceptible to hyperthermia during exercise (Goosey-Tolfrey et al., 2008; Maltais et al., 2004; Bhambhani, 2002). During the

Paralympic tournament, these athletes of the qualified nations were and will be exposed to heat and/or humid conditions. The hyperthermia induced by exercise among athletes with an impairment plus the effects of heat on core temperature will make their performance in the hot and warm conditions more challenging. Some studies have addressed strategies to prevent the physiologic and psychological impairments in athletic performance induced by exercise performed in the heat (Goosey-Tolfrey et al., 2008). Other proposed that wheelchair athletes should follow recommendations advocated for able-bodied individuals to minimize their risks of heat stress during competition (Bhambhani, 2002). In the present issue, the authors provide a descriptive approach of performance, and especially the preparation of athletes with a physical impairment to optimize their exercise performance. We argue that the interactions between environmental conditions and typical responses to exercise of athletes with an impairment and the equipment interactions with athlete's body should be taken into account in the preparation of Paralympic athletes in order to witness the most magnificent sporting display: the Paralympic Games. Finally, the motto of Paralympic movement « Spirit in Motion » is also the philosophy of the present compendium: to present new advances and research findings in the field of applied physiology and biomechanics in exercise, within the context of optimize Paralympic preparation and performance of athletes presented an impairment.
