School Librarians and the Technology Department Mary Ann Bell,Holly Weimar,James Van Roekel,2013-05-23 This handbook provides librarians and technology specialists with the tools to understand the issues and challenges related to their counterparts' jobs, and find ways to work together for the betterment of all concerned. School Librarians and the Technology Department: A Practical Guide to Successful Collaboration was inspired by the authors' collective realization that far too often librarians and technology specialists fail to collaborate successfully, and sometimes even find their groups at odds with one another. This book is the antidote: it is a powerful call to establish and improve relationships between the two for the benefit of the students as well as the librarians and technology specialists themselves. The book begins by providing background information about the history of librarianship and the use of computer technology in schools. The authors trace the origins of the positions related to educational technology, such as technology specialist, teacher, and director. The following chapters describe and address specific concerns of both librarians and technology specialists. Most importantly, this collaborative work offers practical suggestions for cooperation between these two groups of educators as they work together to offer the best possible materials and instructions to students. School Librarians and the Technology Department concludes by hypothesizing what the future holds in the realms of librarianship and technology in this rapidly changing information age.

**Uses of Technology in Primary and Secondary Mathematics Education** Lynda Ball,Paul Drijvers,Silke Ladel,Hans-Stefan Siller,Michal Tabach,Colleen Vale,2018-05-14 This book provides international perspectives on the use of digital technologies in primary, lower secondary and upper secondary school mathematics. It gathers contributions by the members of three topic study groups from the 13th International Congress on Mathematical Education and covers a range of themes that will appeal to researchers and practitioners alike. The chapters include studies on technologies such as virtual manipulatives, apps, custom-built assessment tools, dynamic geometry, computer algebra systems and communication tools. Chiefly focusing on teaching and learning mathematics, the book also includes two chapters that address the evidence for technologies' effects on school mathematics. The diverse technologies considered provide a broad overview of the potential that digital solutions hold in connection with teaching and learning. The chapters provide both a snapshot of the status quo of technologies in school mathematics, and outline how they might impact school mathematics ten to twenty years from now.
