Lessons in Chemistry Bonnie Garmus, 2022-04-05 #1 GLOBAL BESTSELLER WITH MORE THAN 8 MILLION COPIES SOLD • Meet Elizabeth Zott: “a gifted research chemist, absurdly self-assured and immune to social convention” (The Washington Post) in 1960s California whose career takes a detour when she becomes the unlikely star of a beloved TV cooking show. • STREAM ON APPLE TV+ This novel is “irresistible, satisfying and full of fuel” (The New York Times Book Review) and “witty, sometimes hilarious...the Catch-22 of early feminism” (Stephen King, via Twitter). A BEST BOOK OF THE YEAR: The New York Times, Washington Post, NPR, Oprah Daily, Entertainment Weekly, Newsweek Chemist Elizabeth Zott is not your average woman. In fact, Elizabeth Zott would be the first to point out that there is no such thing as an average woman. But it’s the early 1960s and her all-male team at Hastings Research Institute takes a very unscientific view of equality. Except for one: Calvin Evans; the lonely, brilliant, Nobel-prize nominated grudge-holder who falls in love with—of all things—her mind. True chemistry results. But like science, life is unpredictable. Which is why a few years later Elizabeth Zott finds herself not only a single mother, but the reluctant star of America’s most beloved cooking show *Supper at Six*. Elizabeth’s unusual approach to cooking (“combine one tablespoon acetic acid with a pinch of sodium chloride”) proves revolutionary. But as her following grows, not everyone is happy. Because as it turns out, Elizabeth Zott isn’t just teaching women to cook. She’s daring them to change the status quo. Laugh-out-loud funny, shrewdly observant, and studded with a dazzling cast of supporting characters, *Lessons in Chemistry* is as original and vibrant as its protagonist.

Practical experiments in school science lessons and science field trips Great Britain: Parliament: House of Commons: Science and Technology Committee, 2011-09-14 This Science and Technology Committee report on practical experiments in school science lessons and science field trips concludes that many students are receiving poor practical science experiences during their secondary school education. There was no credible evidence to support the frequently cited explanation of health and safety concerns for a decline in practicals and trips. Instead, more focus is needed on what happens after teachers have been recruited to the profession: knowledge and practical skills must be maintained and developed in order for high quality science education to be delivered. High quality science facilities and qualified and experienced technical support are vital. A career structure for technical staff should be provided and the government should ensure schools provide science facilities to match its aspirations for science education. Practical science is relatively expensive and carries little cachet for parents comparing schools. The inspection regime and the requirements set for exam boards should therefore drive higher quality with more and better practical science lessons. The Committee also found a lack of coherence in the provision of science educational materials. It urges the science community to utilise the STEM directories - the online database of STEM enhancement and enrichment activities for schools and colleges - and calls on the government to secure the future of the directories which provide vital contacts between schools and scientists. Finally, the committee urges the government to provide a detailed strategy on how it intends to achieve its ambition to increase participation in school science subjects.
