Networks, Markets, and the Pacific Rim W. Mark Fruin, 1998-11-19 Despite the negative press Asian economies have received in connection with the recent financial crisis, their record of spectacular growth over the past few decades remains irrefutable. In an effort to provide a rich, textured analysis of these economies, editor W. Mark Fruin presents a collection of essays that explores the wide range of network organizations that have been established in the Pacific Rim. Conventional studies of economic organization have tended to center on markets and hierarchies, the two forms of organization most common in the West. But today the world moves too quickly and too unpredictably for the idealized organizations of microeconomic theory to keep up. It is no accident that the region that has generated the world's most explosive economic growth is also the region where network organizations--sets of independent actors who cooperate frequently for mutual advantage--are most pervasive. Rapid economic, social, and technical changes favor the formation of network organizations, and vice versa. The contributors to this volume identify and elucidate four basic types of networks: naturally occurring networks, market replacing networks, hierarchy replacing networks, and market enhancing networks. They show how all of these have been shaped by the history, government, legal system, and culture of each country under consideration. These network organizations allow the authors to compare and contrast network forms in China, Japan, South Korea, Taiwan, and the United States according to features such as degrees of formalization, rule definition, and market conformance. The works collected here make an important contribution to a networks-markets- hierarchies framework that recognizes and emphasizes the diversity of organizational forms and behaviors. A unique resource for scholars and professionals in the fields of management and economics, this book enables a complex analysis of one of the world's fastest growing and most theoretically challenging regions.

**Networking** Mike Ebberts, Rama Ayyar, Octavio L. Ferreira, Yohko Ojima, Gilson Cesar de Oliveira, Mike Riches, Maulide Xavier, IBM Redbooks, 2016-02-10 For more than 40 years, IBM® mainframes have supported an extraordinary portion of the world's computing work, providing centralized corporate databases and mission-critical enterprise-wide applications. The IBM System z®, the latest generation of the IBM distinguished family of mainframe systems, has come a long way from its IBM System/360 heritage. Likewise, its IBM z/OS® operating system is far superior to its predecessors in providing, among many other capabilities, world-class and state-of-the-art support for the TCP/IP Internet protocol suite. TCP/IP is a large and evolving collection of communication protocols managed by the Internet Engineering Task Force (IETF), an open, volunteer organization. Because of its openness, the TCP/IP protocol suite has become the foundation for the set of technologies that form the basis of the Internet. The convergence of IBM mainframe capabilities with Internet technology, connectivity, and standards (particularly TCP/IP) is dramatically changing the face of information technology and driving requirements for even more secure, scalable, and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable, step-by-step guidance about how to enable the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks® publication explains how to set up security for the z/OS networking environment. Network security requirements have become more stringent and complex. Because many transactions come from unknown users and untrusted networks, careful attention must be given to host and user authentication, data privacy, data origin authentication, and data integrity. We also include helpful tutorial information in the appendixes of this book because security technologies can be quite complex.
