Questions on Space, Time and Beyond! (Colored Version) James Anderson, 2015-10-13 This book answers the intriguing questions on space, time and Universe. Such as- Question 1: It's been proved that Universe is expanding, so does that mean that atoms, cells, people, stars and everything in this universe is getting bigger and bigger? Question 2: Will Wormhole travel ever be possible? Question 3: What is parallel Universes and the many-worlds theory? Question 4: Is it true to say that universe is expanding faster than speed of light? Question 5: How old are the atoms in my body? Did they travelled from distant galaxies or from different planet? Question 6: Can artificial black hole be created in laboratory conditions? If so, how small the black hole could be made? Question 7: What is empty space in Universe is really like? Question 8: How Earth would have been, if it didn't turn? Question 9: Are there any new states of matter in universe at ultrahigh temperatures and densities?

100 Years Of Relativity: Space-time Structure - Einstein And Beyond Abhay Ashtekar, 2005-11-22 Thanks to Einstein's relativity theories, our notions of space and time underwent profound revisions about a 100 years ago. The resulting interplay between geometry and physics has dominated all of fundamental physics since then. This volume contains contributions from leading researchers, worldwide, who have thought deeply about the nature and consequences of this interplay. The articles take a long-range view of the subject and distill the most important advances in broad terms, making them easily accessible to non-specialists. The first part is devoted to a summary of how relativity theories were born (J Stachel). The second part discusses the most dramatic ramifications of general relativity, such as black holes (P Chrusciel and R Price), space-time singularities (H Nicolai and A Rendall), gravitational waves (P Laguna and P Saulson), the large scale structure of the cosmos (T Padmanabhan); experimental status of this theory (C Will) as well as its practical application to the GPS system (N Ashby). The last part looks beyond Einstein and provides glimpses into what is in store for us in the 21st century. Contributions here include summaries of radical changes in the notions of space and time that are emerging from quantum field theory in curved space-times (Ford), string theory (T Banks), loop quantum gravity (A Ashtekar), quantum cosmology (M Bojowald), discrete approaches (Dowker, Gambini and Pullin) and twistor theory (R Penrose).

The Story of Space Ylia Callan,2025-08-17 The Story of Space takes readers on an extraordinary journey through humanity's evolving understanding of the cosmos. From ancient sacred skies and religious heavens to the aether of classical philosophers, the precise mechanics of the clockwork universe, and the revolutionary insights of relativity and quantum physics, this book explores space as both a physical reality and a cultural, psychological, and spiritual concept. Blending history, philosophy, science, and imagination, it examines how space shapes human thought, language, art, and dreams, and how our perception of the cosmos continues to evolve. Whether exploring virtual quantum realms, cultural interpretations of intersubjective space, or the imaginative worlds of science fiction, The Story of Space illuminates the profound and multifaceted ways humans experience, measure, and conceptualise the universe around and within them. A fascinating and thought-provoking exploration, this book bridges the gap between rigorous scientific inquiry and the limitless imagination of human culture.
