Often termed the silent killer, hypertension exerts a profound and insidious impact on individual health and public health systems alike, increasing the burden of cardiovascular disease, kidney failure, stroke, and other serious conditions across every demographic. Given its widespread impact, the need to deepen our understanding of hypertension and its lesser-known implications has never been greater. Hypertension: Known & Less Known Facts was born from a desire to address this gap by exploring the extensive and nuanced impacts of hypertension on various organ systems. With 32 chapters covering distinct areas, this monograph brings together the collective wisdom of over 55 esteemed contributors, each a respected voice in their field. Our contributors hail from around the world, representing diverse clinical perspectives and expertise that lend this monograph both depth and breadth. Each chapter within this monograph sheds light on both well-established facets of hypertension and the cutting-edge advancements that push our knowledge forward. From exploring the complex pathophysiology and risk factors, such as genetic and molecular drivers, to discussing innovative therapeutic approaches—including lifestyle modifications, AI integration, and the latest pharmacological developments—this work strives to be a comprehensive resource. The unique section dedicated to lesser-known facts about hypertension addresses aspects often overlooked in conventional clinical discussions, offering fresh perspectives and insights that can lead to more holistic patient care. Our vision for Hypertension: Known & Less Known Facts is that it serves as both an educational foundation and an ongoing inspiration for clinicians,

researchers, and students. As we bring this work to fruition, we do so with the hope that it fosters curiosity, encourages further research, and ultimately enhances the quality of life for those affected by hypertension. It is our sincere belief that every healthcare professional who engages with this monograph will be empowered with knowledge to better address the complexities of hypertension and improve patient outcomes. We are deeply grateful to all those who contributed to this project, from our dedicated contributors to the design team and everyone involved in the production process. It is through this collaborative effort that we present this work, and we extend our heartfelt thanks to all who have made this vision a reality. Together, let us advance in our shared mission to combat hypertension and its widespread impact on global health.

Bioprospecting of Tropical Medicinal Plants Karuppusamy Arunachalam, Xuefei Yang, Sreeja Puthanpura Sasidharan, 2023-08-30 This book focuses on natural products, in particular medicinal plants and their derived products, as an indispensable source of bioactive molecules that serve as either drug candidates or lead compounds for drug design and discovery. There are several advantages for plant-derived therapeutics, including wide availability, diverse pharmacological actions, and a generally good profile of safety and tolerability. Over the recent years, there have been numerous reports from clinical studies testifying the efficacy and safety of medicinal plants and phytochemicals in treating human diseases. A plethora of basic studies has also unraveled molecular mechanisms underlying the health benefits of herbal medicines. Nevertheless, issues such as identification of bioactive ingredients, standardization of the products, and drug interactions remain to be systematically documented. Bioprospecting of Tropical Medicinal Plants represents a comprehensive analysis of natural products, mainly medicinal plants and phytochemicals. It includes detailed medicinal properties and pharmacological action from in vitro models to clinical trials. The goal is to present the readers a carefully curated collection of plant-derived natural products and their underlying molecular mechanisms.

Traditional Resources and Tools for Modern Drug Discovery Anupam Das Talukdar, Jayanta Kumar Patra, Gitishree Das, Deepa Nath, 2024-09-27 This book provides perspectives on the combinatorial approach of plant-based compounds for drug discovery to achieve better disease-curing outcomes introducing the evolution of ethnobotany and traditional medicine in modern drug development. It covers the biotechnological interventions for the identification and screening of compounds and their optimization to enhance affinity, selectivity, bioavailability, and metabolic stability. While over-viewing how essential compounds are successfully identified from herbal/ medicinal plants and utilized in the form of effective drugs which eventually have helped in combating long-term diseases in humans, the book also provides a better understanding of how infection and the diseases caused are regulated at the molecular and physiological stages. The book also highlights the importance of bioactive compounds in modern drug discovery and the perspectives for a potential industrial application. The chapters are developed by eminent subject experts with due care and clarity and cover an up-to-date literature review with relevant illustrations. The book would cater to the needs of undergraduate and graduate students, researchers, and scientists, and may attract the attention of pharmaceutical companies/industrialists and health policymakers.

Taslimahamad Khatri, Pragna L. Mori, Vijay R. Ram, Pragnesh N. Dave, Balubhai A. Golakia, 2014-08-20 Doctoral Thesis / Dissertation from the year 2012 in the subject Chemistry - Analytical Chemistry, grade: 3, Kachchh University (Department of Chemistry), course: MSc, language: English, abstract: Moringa oleifera, an important medicinal plant is one of the most widely cultivated species of the family Moringaceae. It is highly valued from time immemorial because of its vast medicinal properties. The present study provides all necessary information regarding of four parts such as flower, leaves, seed and pulp of moringa like biochemical, phytochemical, mineral, antibacterial activity and its nutritional value. The benefits of essential nutrients and minerals for maintaining good health were also highlighted in this study. The results of proximate analysis of Moringa oleifera revealed that the protein (9.37%), carbohydrate (7.33%), ascorbic acid (2.10%) and total soluble sugar

(0.73%) were highest in flower as compared to leaves, seed and pulp. While free amino acid (9.84%) was found to be higher in seed, total phenol (0.29%) was higher in leaves and reducing sugar (0.43%) higher in pulp of the moringa. The result of qualitative analysis of amino acid represented that lysine, glycine, threonine, valine, Isoleucine, tryptophan, alanine and cysteine were present in moringa. The flower also contained higher amounts of crude fibre (0.23%) as well as moisture (90.56%), while fat (15.53%) content was found higher in seed. The dry matter (30.40%) and total ash (2.12%) content were higher in leaves. The ash content represented minerals in different amounts. The higher amount of potassium was found in flower (50.9%), seed (40.7%) and pulp (77.00%). Leaves contained higher amount of Calcium (57.18%). However Aluminum (10.00%) and Magnesium (6.07%) were found only in leaves. The result of heavy metal (zinc, lead and cadmium) and analysis represented that flower, leaves, seed and pulp have zinc (Zn), lead (Pb) and cadmium (Cd) found in lower amount than permissible limit for human body. The results of phytochemical analysis showed that terpenoids and steroids were present in all parts of moringa. Alkaloids present only in seed. Flavonoid was present in flower and seed, saponins were present in leaves, and tannin was present in leaves and seed. The result of antibacterial activity of different types of sample (flower, leaves, seed and pulp) of moringa showed that salmonella typhii was effectively inhibited in all the extracts studied. But Escherichia coli were not inhibited by any extract. Methanolic extract of flower, leaves, seed and pulp were highly sensitive against the salmonella typhii bacteria
