Framing Languages and Literacies Margaret R. Hawkins, 2013-04-12 In this seminal volume leading language and literacy scholars clearly articulate and explicate major social perspectives and approaches in the fields of language and literacy studies. Each approach draws on distinct bodies of literature and traditions and uses distinct identifiers, labels, and constellations of concepts; each has been taken up across diverse global contexts and is used as rationale and guide for the design of research and of educational policies and practices. Authors discuss the genesis and historical trajectory of the approach with which they are associated; offer their unique perspectives, rationales, and engagements; and investigate implications for understanding language and literacy use in and out of schools. The premise of the book is that understanding concepts, perspectives, and approaches requires knowing the context in which they were created, the rationale or purpose in creating them, and how they have been taken up and applied in communities of practice. Accessible yet theoretically rich, this volume is indispensable for researchers, students, and professionals across the fields of language and literacy studies.

Situated Language and Learning James Paul Gee, 2012-10-02 Why do poor and minority students under-perform in school? Do computer games help or hinder learning? What can new research in psychology teach our educational policy-makers? In this major new book, Gee tackles the 'big ideas' about language, literacy and learning, putting forward an integrated theory that crosses disciplinary boundaries, and applying it to some of the very real problems that face educationalists today. *Situated Language and Learning* looks at the specialist academic varieties of language that are used in disciplines such as mathematics and the sciences. It argues that the language acquisition process needed to learn these forms of language is not given enough attention by schools, and that this places unfair demands on poor and minority students. The book compares this with learning as a process outside the classroom, applying this idea to computer and video games, and exploring the particular processes of learning which take place as a child interacts with others and technology to learn and play. In doing so, Gee examines what video games can teach us about how to improve learning in schools and engages with current debates on subjects such as 'communities of practice' and 'digital literacies'. Bringing together the latest research from a number of disciplines, *Situated Language and Learning* is a bold and controversial book by a leading figure in the field, and is essential reading for anyone interested in education and language.
