KIDNEY STONE DETECTION USING CONVOLUTIONAL NEURAL NETWORKS APPROACH V.Radha Krishna, **Recent Trends in Image Processing and Pattern Recognition** K. C. Santosh,Ravindra S. Hegadi,2019-07-15 This three-book set constitutes the refereed proceedings of the Second International Conference on Recent Trends in Image Processing and Pattern Recognition (RTIP2R) 2018, held in Solapur, India, in December 2018. The 173 revised full papers presented were carefully reviewed and selected from 374 submissions. The papers are organized in topical sections in the three volumes. Part I: computer vision and pattern recognition; machine learning and applications; and image processing. Part II: healthcare and medical imaging; biometrics and applications. Part III: document image analysis; image analysis in agriculture; and data mining, information retrieval and applications.

Computer Vision and Image Processing Neeta Nain,Santosh Kumar Vipparthi,Balasubramanian Raman,2020-03-28 This two-volume set (CCIS 1147, CCIS 1148) constitutes the refereed proceedings of the 4th International Conference on Computer Vision and Image Processing. held in Jaipur, India, in September 2019. The 73 full papers and 10 short papers were carefully reviewed and selected from 202 submissions. The papers are organized according to the following topics: Part I: Biometrics; Computer Forensic; Computer Vision; Dimension Reduction; Healthcare Information Systems; Image Processing; Image segmentation; Information Retrieval; Instance based learning; Machine Learning.Part II: Neural Network; Object Detection; Object Recognition; Online Handwriting Recognition; Optical Character Recognition; Security and Privacy; Unsupervised Clustering.

Advanced Sensing in Image Processing and IoT Rashmi Gupta,Arun Kumar Rana,Sachin Dhawan,Korhan Cengiz,2022-03-27 The book provides future research directions in IoT and image processing based Energy, Industry, and Healthcare domain and explores the different applications of its associated technologies. However, the Internet of Things and image processing is a very big field with a lot of subfields, which are very important such as Smart Homes to improve our daily life, Smart Cities to improve the citizens' life, Smart Towns to recover the livability and traditions, Smart Earth to protect our world, and Industrial Internet of Things to create safer and easier jobs. This book considers very important research areas in Energy, Industry, and Healthcare domain with IoT and image processing applications.The aim of the book to highlights future directions of optimization methods in various engineering and science applications in various IoT and

image processing applications. Emphasis is given to deep learning and similar models of neural network-based learning techniques employed in solving optimization problems of different engineering and science applications. The role of AI in mechatronics is also highlighted using suitable optimization methods. This book considers very important research areas in Energy, Industry, and Healthcare. It addresses major issues and challenges in Energy, Industry, and Healthcare and solutions proposed for IoT-enabled cellular/computer networks, routing/communication protocols, surveillances applications, secured data management, and positioning approaches. It focuses mainly on smart and context-aware implementations. Key sailing Features: The impact of the proposed book is to provide a major area of concern to develop a foundation for the implementation process of new image processing and IoT devices based on Energy, Industry, and Healthcare related technology. The researchers working on image processing and IoT devices can correlate their work with other requirements of advanced technology in Energy, Industry, and Healthcare domain. To make aware of the latest technology like AI and Machine learning in Energy, Industry, and Healthcare related technology. Useful for the researcher to explore new things like Security, cryptography, and privacy in Energy, Industry, and Healthcare related technology. People who want to start in Energy, Industry, and Healthcare related technology with image processing and IoT world.

Pervasive Computing and Social Networking G. Ranganathan, Robert Bestak, Ram Palanisamy, Álvaro Rocha, 2022-01-01 The book features original papers from International Conference on Pervasive Computing and Social Networking (ICPCSN 2021), organized by NSIT, Salem, India during 19 – 20 march 2021. It covers research works on conceptual, constructive, empirical, theoretical and practical implementations of pervasive computing and social networking methods for developing more novel ideas and innovations in the growing field of information and communication technologies.

Emerging Trends in Computing and Expert Technology D. Jude Hemanth, V. D. Ambeth Kumar, S. Malathi, Oscar Castillo, Bogdan Patrut, 2019-11-07 This book presents high-quality research papers that demonstrate how emerging technologies in the field of intelligent systems can be used to effectively meet global needs. The respective papers highlight a wealth of innovations and experimental results, while also addressing proven IT governance, standards and practices, and new designs and tools that facilitate rapid information flows to the user. The book is divided into five major sections, namely: “Advances in High Performance Computing”, “Advances in Machine and Deep Learning”, “Advances in Networking and Communication”, “Advances in Circuits and Systems in Computing” and “Advances in Control and Soft Computing”.

Ultrasonic Detection and Expulsion of Kidney Stones Wei Lu, 2012 Kidney stone disease afflicts 10% of the U.S. population and severely affects the life quality of patients. There are still many problems with the diagnosis and treatment of renal stones. In diagnosis, X-ray computerized tomography (CT) is the most commonly used technology as it allows

urologists/radiologists to locate the stone(s) with high sensitivity. Unfortunately, more and more evidence has been collected that shows that the radiation exposure to patients during CT scans may increase the risk of developing cancer. In kidney stone treatments, extracorporeal shock-wave lithotripsy (ESWL), which breaks the stone with shock waves, is widely used as it is non-invasive and allows the fragments to pass naturally; however, small stone fragments located in the lower pole of the kidney often remain in the kidney, which can cause stones to recur in 50% of ESWL patients within 5 years. Therefore, new technologies that allow for better kidney stone detection and treatment are needed. The twinkling artifact (TA) has been shown to highlight kidney stones during color Doppler ultrasound imaging with high sensitivity for stone detection; however, the instability of the TA has prevented it from being adopted clinically. In this dissertation, the mechanism of the TA was investigated based on raw radio-frequency (RF) data collected from in vitro human kidney stones using the MATLABM Programmable Verasonics® ultrasound engine. Algorithms, such as beamforming, quadrature demodulation, Doppler processing, etc., were developed to minimize ambiguity in the signal processing. Synthesized RF signals were sent directly into the ultrasound machine in order to separate the acoustic effects from the signal processing effects. It was determined the variability that results in the TA arises from acoustical interactions with the stone. Next, the acoustical effects (i.e., crevice microbubbles, stone ringing, etc.) of the TA were investigated by applying high static pressure (up to 8.5 MPa) on old and fresh human stones where it was determined that microbubbles trapped in crevices on the surface of the stone plays an important role in producing the TA. Modeling simulations were applied to eliminate stone ringing as a possible contributor to the TA. These results have led to the development of new imaging algorithms for better stone detection. A quantitative comparison between the new twinkling image algorithms and the classic color Doppler TA shows that the new imaging techniques are more stable and accurate. Besides improving kidney stone detection, an ultrasound-guided system that is capable of expelling small kidney stones or stone fragments from the kidney has been developed. This device uses acoustic radiation forces and associated acoustic streaming to 'push' stones out of the lower pole of the kidney and has been tested successfully in a stone phantom and in many in vivo porcine experiments. Preliminary histological results suggest that the device is safe and that there is no visible thermal or mechanical damage to the kidney. The primary result of this dissertation is insight into the mechanism of the TA, which allowed for the development of new ultrasonic stone-specialized imaging algorithms. In addition, a novel ultrasound technology was developed for expelling small stones or stone fragments from the kidney. Besides furthering science, the results from this dissertation should directly influence patients as it provides improved stone detection and treatment technologies with ultrasound, a non-ionizing alternative to traditional diagnosis regimes, that holds great promise to be adopted clinically.

Kidney Disease in Primary Care Anil K. Mandal, N. Stanley Nahman, 1998 Kidney Disease in Primary Care is the first text of its kind to integrate the complex pathophysiology of kidney disease with straightforward diagnostic and therapeutic

approaches to the patient. Drs. Mandal and Nahman have written the ideal problem-oriented, curbside consultation reference. From diabetes mellitus to frequent urination, you'll find all the common kidney-related problems you encounter on a daily basis. This handy guide gives you the tools you need to identify and create these problems effectively, and how to determine if the conditions are reversible or irreversible.

American Medical Association Complete Medical Encyclopedia Jerrold B. Leikin, American Medical Association, Martin S. Lipsky, 2003 This is a brand new, state-of-the art consumer medical encyclopedia from America's most trusted authority, aimed at the 30+ reader who still trusts a distinguished reference book more than the Internet, and who cares profoundly about his or her own health and that of the whole family. The AMA literally started from scratch to produce this book, so it is in no way to be considered a revision of any previously published title. Special features include: a full-color Atlas of the Body; sections on 21st century medicine including genetics, brain imaging, robotic surgery, and other cutting edge topics; 40 symptom charts; and a heavily illustrated First Aid section with step-by-step suggestions for handling common injuries at home. It has extensive coverage of Alternative Medicine: 80 separate entries and several sidebars that cover the latest in alternative therapies, all edited and reviewed by physicians involved in alternative medicine. The fact that AMA is addressing alternative medicine when the competition largely avoids the topic proves that they know what today's health care consumer wants. AMA Complete Medical Encyclopedia devotes considerable space to mental health issues, with 229 entries on a wide range of Psychiatry topics. It has 129 entries on nutrition, and also covers exercise, sports medicine, and cosmetic surgery. It covers death and dying; home care; geriatric concerns; and specific life stages. Every entry, sidebar, illustration and feature was reviewed by one or more medical doctors, and specialists from dozens of fields reviewed the text and art for accuracy. The book has 6,000 entries covering about 2,000 illnesses and definitions for about 500 different tests and surgical procedures, plus a complete pharmacology section. It has more than 1,750 illustrations, all of which were created for this book, including 32 pages of color.
