Social Skills Instruction for Students with Autism Spectrum Disorders Tiffany Lynn Born, 2015 Although there is a push to include students with autism spectrum disorders in the general academic context, students with autism are often not fully included in the social environment of schools. Even when students with autism are in the same settings as their typically developing peers, they often have few social interactions with their peers (e.g., Carter, Hughes, Guth, & Copeland, 2005). One reason for the dearth of social interactions that students with autism have during the school day may be related to deficits in social skills which can interfere with interactions with peers. Peer networks, a type of peer-mediated intervention, have been shown to be effective in increasing the social contacts and relationships of students with disabilities. In peer networks, gains in social interactions are accomplished by providing training to general education peers who compromise a social network for the student with a disability (SWD) outside of the classroom setting. However, the literature on peer

networks varies as to if specific social skills training for the SWD is included and often does not fully examine specific or even general social skills deficits of the SWD. This study examined the effectiveness of a peer network plus intervention which incorporated an explicit social skills training component within a peer network framework. Four participants with an educational diagnosis of autism participated in a 10 week peer network intervention. A social skills training component was added to the peer network systematically. The purpose of this study was to examine the effectiveness of the peer network plus intervention for (a) enhancing targeted social skills of the students with autism, (b) enhancing broader social skills as measured by multiple social skill and adaptive questionnaires, and (c) increasing the number of social contacts, friendships, and interactions students with autism have in high schools. In addition, the social validity of this intervention was measured in order to determine the feasibility and acceptability for use in schools and by school personnel. Finally, the study examined the sensitivity of the Autism Social Skills Profile (ASSP, Bellini & Hopf, 2007) for use as a progress monitoring tool with these interventions. Using a multiple baseline across participants design, this study demonstrated that the social skills component of the peer network plus intervention was effective at improving the targeted social skills of all four participants. Two independent coders found Strong Overall Evidence for improvements in social skills when the social skills component was added for each participant. There was Moderate Overall Evidence for the impact of the social skills training component on the number of interactions students with autism had with their peers during the network meetings. Students with autism, peers without disabilities, and school staff interventionists all rated the intervention favorably. The ASSP was not consistently sensitive enough to detect improvements in social skills for all participants. Implications of the study, as well as limitations and directions for future research, are discussed.

Social Behavior and Skills in Children Johnny L. Matson, 2009-09-18 That children are capable of pathology—not only such conditions as ADHD and learning disabilities, but also such adult disorders as anxiety and depression—stands as a defining moment in psychology’s recent history. Within this recognition is the understanding that the social skills deficits that accompany these disorders must be targeted for assessment and treatment to ensure optimal functioning in school, with peers, and in later transitions to puberty and adulthood. *Social Behavior and Skills in Children* cuts across disciplinary lines to clarify the scope of assessment options and interventions for a wide range of disorders. A panel of leading scholars reviews current research, discusses social deficits unique to specific disorders, and identifies evidence-based best practices in one authoritative, approachable reference. This volume: Discusses theoretical models of social skills as they relate to assessment and treatment. Analyzes the etiology of social behavior problems in children and the relation between these problems and psychopathology. Reviews 48 norm-referenced measures of social skills in children. Examines the range of evidence-based social skills interventions. Addresses challenging behaviors, such as aggression and self-injury. Focuses on specific conditions, including developmental disabilities, conduct disorders, ADHD, chronic medical illness, depression, anxiety, and severe psychopathology. *Social Behavior and Skills in Children* is an essential reference for university libraries as well as a must-have volume for researchers, graduate students, and clinicians in child, and school psychology, special education, and other related fields.

Lifespan Treatment for Autistic Individuals Peter Sturmey, Professor of Special Education Russell Lang, Russell Lang, Director of Clinical Development and Research James K Luiselli, James K. Luiselli, 2025-07-21 In a world filled with hundreds of ASD treatments, it is crucial to distinguish between evidence-based practices and ineffective and potentially harmful pseudoscientific approaches. Interpreting ASD treatment research is complicated by differences in research norms across disciplines, competing theoretical underpinnings, and misleading information available from media sources. Overall, these issues contribute to a gap between the outcomes demonstrated in scientific studies and what is achieved in applied settings (e.g., schools, homes and clinics). *Lifespan Treatment for Autistic Individuals* guides professional practitioners in the selection of treatments that are procedurally and ethically best suited for their individual clients.

Social Skills for Teenagers with Developmental and Autism Spectrum Disorders Elizabeth A. Laugeson, Fred Frankel, 2011-01-19 This book is essential reading for any clinician or researcher working with teens with autism spectrum disorders. This parent-assisted intervention for teens is based on a comprehensive, evidence-based, 14-week program at UCLA's Semel Institute for Neuroscience and Human Behavior, the manualization of the popular UCLA PEERS Program, and the success of the Children's Friendship Training (Routledge, 2002) manual for children. After reviewing techniques designed to help parents and therapists tailor the manual to the needs of the teens with whom they are working, the text moves on to the individual treatment sessions and strategies for tackling issues such as developing conversational skills,

choosing friends, using humor, get-togethers, teasing, bullying, gossiping, and handling disagreements. Each session chapter includes handouts, homework assignments, descriptions of what to expect (and how to handle challenges in delivering the intervention), and customized tips for both parents and therapists.
