Thinking, Fast and Slow Daniel Kahneman, 2011 Daniel Kahneman, recipient of the Nobel Prize in Economic Sciences for his seminal work in psychology challenging the rational model of judgement and decision-making, is one of the world's most important thinkers. His ideas have had a profound impact on many fields - including business, medicine and politics - but until now he has not brought together his many years of research in one book. In *Thinking, Fast and Slow*, Kahneman takes us on a groundbreaking tour of the mind and explains the two systems that drive the way we think and make choices. One system is fast, intuitive, and emotional; the other is slower, more deliberative, and more logical. Kahneman exposes the extraordinary capabilities - and also the faults and biases - of fast thinking, and reveals the pervasive influence of intuitive impressions on our thoughts and behaviour. The importance of properly framing risks, the effects of cognitive biases on how we view others, the dangers of prediction, the right ways to develop skills, the pros and cons of fear and optimism, the difference between our experience and memory of events, the real components of happiness - each of these can be understood only by knowing how the two systems work together to shape our judgments and decisions. Drawing on a lifetime's experimental experience, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our professional and our personal lives - and how we can use different techniques to guard against the mental glitches that often get us into trouble. *Thinking, Fast and Slow* will transform the way you take decisions and experience the world. Levitt, co-author of *Freakonomics* 'Daniel Kahneman is among the most influential psychologists in history and certainly the most important psychologist alive today. He has a gift for uncovering remarkable features of the human mind, many of which have become textbook classics and part of the conventional wisdom. The appearance of *Thinking, Fast and Slow* is a major event.' Steven Pinker, author of *The Better Angels of our Nature* 'This is a landmark book in social thought, in the same league as *The Wealth of Nations* by Adam Smith and *The Interpretation of Dreams* by Sigmund Freud.' He wants to provide a richer and more accurate vocabulary to discuss these errors. He worked with his colleague, Amos Tversky, doing research on intuitive statistics. The two of them had already concluded in an earlier seminar that their own intuitions were lacking. Their subjective judgments were biased, they were too willing to believe research findings based on inadequate evidence, and they collected too few observations in their own research. The goal of their study was to find out whether other researchers had this problem as well. Kahneman and Tversky found that participants in their studies ignored the relevant statistical facts and relied exclusively on resemblance. They used resemblance as a heuristic (rule of thumb) to simplify things when making a difficult judgment. Relying on this heuristic caused predictable biases (systematic errors) in their predictions. The research partners learned that people tend to determine the importance of issues by how easy they are retrieved from their memory. This is brought about in large part by the extent of coverage of the issues in the media. Kahneman presents a view of how the mind works, drawing on recent developments in cognitive and social psychology. He explains the differences between fast (intuitive) thinking and slow (deliberate) thinking. People have a limitation in their minds: an excessive confidence in what they think they know...

are people. He refers to something that he calls System 1 and System 2. System 1 is dedicated to thinking fast. It almost solely relies on intuition and almost entirely disregards information. System 1 is in control every time we do an activity that requires quick thinking and reactions. For example, System 1 is in control when we drive, when we want to read other people's facial expressions, when we answer to questions that require quick answers, etc. Kahneman states that System 1 is involuntary and operates entirely on its own. System 2 thinks slowly and always relies on information and almost never on intuition. System 2 is in control when we try to solve difficult math problem, when we want to focus our attention on the voice of person in a room full of people, when we fill in tax forms, or during any other events that are based on awareness.
